mentionable (men'shon-ə-bl), *a.* [*< mention + -able.*] That can or may be mentioned.

mentohyoid (men-tō-hi'oid), *a.* and *n.* [*< L mentum, the chin, + NL hyoides, hyoid.*] 1. *a* Pertaining to the chin and to the hyoid bone.

II. *n* An occasional muscle in man, passing between the chin and the hyoid bone.

mentomeckelian (men'tō-me-kē'li-an), *n.* [*< L mentum, the chin, + Meckel (see def) + -ian.*] A distal division of Meckel's cartilage around which the lower jaw ossifies, as distinguished from a proximal division which is converted into a part of the suspensorium of the jaw or an ossicle of the ear.

mentonnière (mon-ton-iār'), *n.* [*F., < OF. mentoniere, < menton, the chin, < L mentum, the chin + see mentum.*] 1. Same as *beaver*. — 2. A piece of armor, used on occasions of special danger as an appendage to the open helmet, worn about the close of the fifteenth and the beginning of the sixteenth century. It was put on outside of the gorget, secured to the helmet by hooks on each side and by a slot or similar contrivance at the umbril, and thus replaced the vizor and beaver of the armor, except that it was not capable of being raised, but had to be removed altogether.

3. An extra defense used during the just, protecting the throat and lower part of the face. [Rare]

Mentonnière, close of 15th century

4. An extra defense used during the just, protecting the throat and lower part of the face. [Rare]

mentor (men'tor), *n.* [*< L Mentor, < Gr Mēn-tor, Mentor (or Athena in his guise), friend and adviser of Odysseus (Ulysses) and of Telemachus, prob 'adviser,' akin to L. monitor, adviser see monitor.*] One who acts as a wise and faithful guide and monitor, especially of a younger person; an intimate friend who is also a sage counselor, as of one who is young or inexperienced.

mentorial (men-tō'ri-al), *a.* [*< mentor + -ial.*] Containing advice or admonition.

mentum (men'tum), *n.*, pl *menta* (-tā) [*L, the chin.*] 1. The chin; the anterior and inferior part of the mandible or under jawbone of a mammal, with or without associated soft parts. It sometimes is regarded as including the parts in the whole interramal space, or interval between the horizontal ramus of the mandible.

2. In *entom.*, the median or central and usually principal part of the labium. The term has been applied to different parts of the labium, in different insects and also in the same insect, whence confusion has arisen, especially in the use of the terms *mentum* and *submentum*. The *mentum* is properly the part of the labium between the submentum and the ligula, and is often less conspicuous than either of these. See *labium*, and cut at *mouth-parts*.

3. In *bot.*, a projection in front of the flower in some orchids, caused by the extension of the foot of the column. — *Levator menti.* See *levator*. — *Mentum abscunditum*, the retracting chin, not attaining to a perpendicular let fall from the alveolar border of the jaw, a chin with no prominence. — *Mentum prominulum*, the protrusive chin, extending beyond a perpendicular let fall from the alveolar border of the jaw. — *Quadratus menti*, the depressor labii inferioris, a muscle of the chin which draws down the lower lip. — *Symphysis menti*, the midline of union of the two halves of the lower jaw bone. — *Tooth of the mentum*. Same as *mentum-tooth*. — *Triangularis menti*, the depressor anguli oris, a muscle which draws down the corner of the mouth.

mentum-tooth (men'tum-tōth), *n.* In *entom.*, a small median process on the front margin of the mentum, generally within an emargination. It is found in certain *Coleoptera*.

Mentzelia (ment-zē'h-ā), *n.* [*NL (Plumier, 1703), named after C. Mentzel, a botanical author of Brandenburg in the 17th century.*] A genus of dicotyledonous polypetalous plants of the natural order *Loaseae*. It is distinguished by a one-celled ovary with an indefinite number of ovules, by having no scales on the corolla, and by alternate leaves. About 40 species are known, which are found in the warmer and tropical regions of America, especially in the western part. They are herbs or small shrubs, usually with rigid tenacious barbed hairs, leaves which are mostly coarsely toothed or pinnatifid, and yellow or white flowers, which are cymose or solitary.

menu (mə-nū'), *n.* [*F., < L. minutum, neut of minutus, small. see minute.*] A bill of fare.

Menura (mə-nū'rā), *n.* [*NL, so called in ref to the extraordinary form of the tail (which is otherwise compared to a lyre), < Gr μύρη, the moon, + οὐρά, tail.*] The typical and only known genus of *Menuridae*. Three species are described: *M. superba*, *M. victoria*, and *M. alberti*, all of Australia, and two apparently valid. See cut under *lyre-bird*. Also written, incorrectly, *Manura*, *Manura*.

menurancet, *n.* See *manurancet*.

menuret, *v. i.* See *manure*.

Menuridae (mə-nū'rī-dē), *n. pl.* [*NL, < Menura + -idae.*] An Australian family of anomalous or pseudoscimne passerine birds, represented by the genus *Menura*, the lyre-birds. It is one of two families (the other being *Atrichidae*) which, though belonging to the order *Passeres*, deviate from the normal passerine type in the structure of the vocal organs and in some other particulars, to such an extent that a separate division of the order has been established for their reception. (See *Menuridae* and *Pseudoscimne*.) The remarkable conformation of the tail of the male birds early attracted attention, and the size and general appearance of the birds caused them for many years to be considered as raptorial or gallinaceous, they being accordingly ranked with the mound birds, curassows, and guans. Subsequently they were referred by some authors to the American family of rock wrens (*Pteropodidae*). It is only of late years that a knowledge of the anatomical structure has enabled ornithologists to classify the family correctly.

menuroid (men'ū-roid), *a.* Having the characters of the *Menuroidea*, pseudoscimne.

Menuroidea (men-ū-roi-dē-ō), *n. pl.* [*NL, < Menura + -oidea.*] A superfamily of pseudoscimne passerine birds containing the *Menuridae* and *Atrichidae*, or the Australian lyre-birds and scrub-birds, characterized by the abnormal structure of the acromyodian syrinx, and the disposition of the tensor patagii brevis as in picarian birds.

menuse, *v.* A Middle English form of *minish*.

menuse, *n.* See *menuse*.

Menyanthes (men-i-an'thē-ō), *n. pl.* [*NL (Grisobach, 1839), < Menyanthes + -ea.*] A tribe of plants of the natural order *Gentianeae*, the gentian family. It is characterized by having radical or alternate leaves, and by the lobes of the corolla being induplicate-valvate in the bud. It embraces 4 genera, of which *Menyanthes* is the type and about 40 species.

Menyanthes (men-i-an'thē-ā), *n.* [*NL (Tournefort, 1700), improper for Menyanthes or Menyanthes, < Gr μύναος, or μύναος, monthly, or μύρ, month, + άνθος, flower.*] A genus of plants of the natural order *Umbellales*, type of the tribe *Menyantheae*. It is characterized by a capsule which breaks open irregularly at the top into two partial valves, and by long petiolate radical leaves, which are trifoliate or round, reniform, and crenate. There are two species, or perhaps only one, *M. trifoliata*, the bog bean, buckbean, or marsh trefoil. They are herbaceous water plants, with a creeping rootstock, sheathed by the membranous bases of the long petioles, and bear white or bluish flowers, which grow in a raceme at the apex of a long leafless scape. See *bog bean*.

menyanthin (men-i-an'thin), *n.* [*< Menyanthes + -in.*] A bitter principle obtained from *Menyanthes trifoliata*.

menyet, menyiet, n. Other forms of *meny*.

menyngt, *n.* A Middle English form of *meaning*.

menzie (mē'ny), *n.* A Scotch form of *meny*.

Before all the menzie, and in her moment of power, the Queen humbled her to the dust by taxing her with her shame
Scott, Abbot, xxxi.

Menziesia (men-'i-ē'si-ā), *n.* [*NL (J. E. Smith, 1806), so named after Archibald Menzies (died 1842), surgeon and naturalist to the expedition under Vancouver. The surname Menzies, prop Menyies (the z being orig merely another shape of y), appears to be derived from ME menzie, i e menyie, var of menyie, etc., a household see meny.*] A genus of plants of the natural order *Ericaceae* and the tribe *Rhodoreae*. It is distinguished by the loose coat of the seeds, the short gamopetalous corolla, and the 4 to 5 celled ovary. There are 7 species, natives of North America, Japan, and Kamchatka, shrubs with alternate petioled entire deciduous leaves, and small or medium sized flowers in terminal racemes. One species, *M. globularis*, is found in the Alleghanies. The Irish heath, *Daboecia polyfolia*, was formerly included in this genus.

meoblet, *a* and *n* See *mobile*.

meont, *n.* [*< Gr μῶν, spiguel see Meum, mew?*] Same as *mew*. *Minsheu*

Mephistophelean (mef'is-tō-fē'lē-an), *a.* [*< Mephistopheles + -an.*] Same as *Mephistophelean*.

Wit is apt to be cold and Mephistophelean in men who have no relish for humour
George Eliot, Essays, German Wit.

Mephistopheles (mef-is-tof'e-lēs), *n.* [Written *Mephistophilus* in Shakespeare, Fletcher, etc.,

Mephistophilus in Marlowe, but now generally *Mephistopheles*, as in Goethe; a made-up name, like most of the names of the medieval devils. Whether the orig concocter of the name meant to form it from Gr μῆ, not, + φῶς (phōs-), light, + φῖλος, loving (a plausible etymology, though the formation is irregular), or from some other elements (some conjecture Gr ἱεφός, a cloud, + φῖλος, loving), or merely concocted a Greek-seeming name of no meaning, must be left to conjecture.] The name of a familiar spirit mentioned in the old legend of St John Faustus, and a principal agent in Marlowe's play of Dr Faustus, and in Goethe's "Faust."

Then he may pleasure the king, at a dead pinch too,
Without a Mephistophilus, such as thou art.
Fletcher, Wit for a Month, v 1

Mephistopheles is the Spirit of Negation, and his being exists through opposition to the positive Truth, and Order, and Beauty, which proceed from the never ending creative energy of the Deity. His irreverence and irony are a part of his nature
B Taylor, Faust, I, note 58.

Mephistophilian (mef'is-tō-fē'li-an), *a.* [Also *Mephistophilic*, < *Mephistophilus* + -ian.] Of, pertaining to, or resembling in character the spirit Mephistopheles, diabolical, satanic, jeering, irreverent.

mephitic (mē-hī'tik), *a.* [= *F mephitico* = *Sp mephitico* = *Pg mephitico* = *It mephitico*, < *LL mephitica*, pestilential, < *L mephitis*, a pestilential exhalation see *mephitis*.] Pertaining to mephitis, foul, noxious, pestilential, poisonous, stifling.

The schools kept the thinking faculty alive and active, when the disturbed state of civil life, the mephitic atmosphere engendered by the dominant ecclesiasticism, and the almost total neglect of natural knowledge might well have stifled it. Huxley, Nineteenth century, XXI 196.

That strange and scarcely known lily, alas! of almost mephitic odor, the xerophyllum
Harper's Mag, LXXXVIII 808

Mephitic gas, carbon dioxide.

mephitical (mē-hī'ti-kal), *a.* [*< mephitic + -al.*] Same as *mephitis*.

mephitically (mē-hī'ti-kal-i), *adv.* [*< mephitical + -ly.*] With mephitic, foully, pestilentially.

Mephitinae (mef-i-tī'nē), *n. pl.* [*NL, < Mephitis + -inae.*] A subfamily of *Mustelidae* peculiar to America, typified by the genus *Mephitis*, the skunks. The group is closely related to the badgers or *Melinae* and to the African *Zorilinae*, the three being combined by some authors. But the *Mephitinae* are distinguished by having 2 or 4 more teeth in the lower than in the upper jaw, the back upper molar quadrate, and the premolars 4 above and below on each side (in one genus only 2 above on each side). The form is stout, with moderately developed limbs, unwebbed digits, and long bushy tail, the coloration is black and white, there is no subcaudal pouch as in badgers, but the perineal glands are enormously developed, secreting the fluid which forms a means of defense and offense. The habits are terrestrial and to some extent fossorial. There are 4 genera, *Mephitis*, *Spilogale*, and *Conocephalus*.

mephitis (mē-fī'tis), *n.* [*< L mephitis, a pestilential exhalation, personified, Mephitis, also Mephitis, a goddess who averts pestilential exhalations.*] 1. A pestilential exhalation, especially from the earth, any noxious or ill-smelling emanation, as from putrid or filthy substances, a noisome or poisonous stench. — 2. [*cap*] [*NL*] A genus of skunks, typical of the subfamily *Mephitinae*. The teeth are 34 in number, 16 above and 18 below. The pelage is very long, the tail long and very bushy, and the coloration black, striped or spotted with white. The palatal ends opposite the last molar, the mastoid process is flaring, the periotics are not much inflated, the zygomatics rise backward, and the profile of the skull is highest over the orbits. The nostrils are lateral, and the soles hairy at least in part. There are several species of North and Central America, the best-known of which is *M. mephitis*, the common skunk. *M. macrura* is the long-tailed skunk of Mexico. The little striped skunk, *M. putorius* of the United States is referred by Cuvier to the genus *Spilogale*. The South American and African skunks which have been referred to *Mephitis* belong to other genera. See *skunk*.

mephitism (mē-fī'tizm), *n.* [*< mephitis + -ism.*] Same as *mephitis*. 1. *Dungham*

Mephistophilus, Mephistophilist, *n.* See *Mephistopheles*.

meracious (mā-rā'shūs), *a.* [Erroneously for **meracous*, < *L meracius*, pure, unmixed, < *merus*, pure see *mer*.] Without admixture or adulteration, pure, hence, strong, racy.

meracity (mā-rās'i-ti), *n.* [*< L meracius, pure see meracious.*] Clearness or pureness. *Bailey*, 1731.

Bonaparte was esteemed an adept in the mystery of mercantile politics
Macaulay, Hist. Eng., vi.

2 Characteristic of the business of merchants, in accord with business principles

It was found essential to establish the work [the "Edinburgh Review"] on a sound mercantile basis, with a paid editor and paid writers
Sydney Smith, Wit and Wisdom

Mercantile law, the laws applicable to commercial transactions, the law merchant. See *law merchant*, under *law*. — **Mercantile system**, in *polit. econ.*, the belief, generally held till the end of the last century, that all wealth consists in gold and silver, and that therefore the exportation of goods and importation of gold should be encouraged by the state, while the importation of goods and the exportation of gold should be forbidden, or at least restricted as much as possible

While there are so many things to render the assumption which is the basis of the mercantile system plausible, there is also some small foundation in reason, though a very insufficient one, for the distinction which that system so emphatically draws between money and every other kind of valuable possession

J. S. Mill, Pol. Econ., Prelim. Rem.

Thus, the *Mercantile System* admits every mode of applying the three factors of production, but considers them really productive only in so far as they increase the quantity of the precious metals possessed by the nation, either through the agency of mining at home or by means of foreign trade
W. Roemer, Pol. Econ. (trans.), I, 169

=Syn. *Mercantile*, *Commercial*. *Commercial* is the broad or term, including the other. *Mercantile* applies only to the actual purchase and sale of goods, according to one's line of business, the mercantile class in a community comprises all such as are actually in the business of buying and selling. *Commercial* covers the whole theory and practice of commerce, home or foreign, as, the British are a commercial people, commercial usages, honor, law. The word is applicable wherever the more varied activities of commerce are concerned

mercantilism (mër'kan-tīl-iz-m), *n* [*< mercantile + -ism*] 1 The mercantile spirit or character, devotion to trade and commerce, excessive importance attached to traffic, or to exchange of values in any way

Mercantilism is drawing into its vortex the intellectual strength of the nation
The Century, XXXI, 311

2 In *polit. econ.*, the mercantile system, or the theories embodied in it. See *mercantile*

Indeed, it has been justly observed that there are in him [Hume] several traces of a refined mercantilism, and that he represents a state of opinion in which the transition from the old to the new views is not yet completely effected
Encyc. Brit., XIX, 364

mercantilist (mër'kan-tīl-ist), *n* [*< mercantile + -ist*] 1 A devotee of mercantilism, a believer in the supreme importance of trade and commerce — 2 In *polit. econ.*, an advocate of the mercantile system, or of some similar theory

The mercantilists may be best described, as Roemer has remarked, not by any definite economic theorem which they held in common, but by a set of theoretic tendencies, commonly found in combination, though severally prevailing in different degrees in different minds
Encyc. Brit., XIX, 364

mercantilistic (mër'kan-tīl-ist'ik), *a* [*< mercantilist + -ic*] Pertaining to mercantilism, or to the mercantile system in political economy, characteristic of mercantilists

Stationed by, as waiting a result,
Lean silent gangs of mercenaries ceased
Working to watch the strangers
Browning, Borello

2. Specifically, a soldier in foreign service, a professional soldier. This term became common during the long wars of the years immediately following the middle ages, when professional soldiers who served any one who would pay them were contrasted with those who still followed their feudal superiors

This is to show, both how tyranny grows to stand in need of mercenary soldiers, and how those mercenaries are firmly assured unto the tyrant
Raleigh, Hist. World, V, II, 2

Like mercenaries, hired for home defence,
They will not serve against their native Prince
Dryden, Hind and Panther, II, 290

The Chief Citizens, like the noble Italians, hire mercenaries to carry arms in their stead
Steele, Tatler, No. 23.

merc (mër'sér), *n* [*< ME. mercer*, *meercere*, < OF. *mercier*, F. *mercier* = Pr. *mercier*, *mercier* = Sp. *mercero* = Pg. *mercero* = It. *mercajo*, < ML. *mercarius* (also *mercunus*, *mercunus*, after OF.), a trader, a dealer in small wares, < L. *merx* (merc-), merchandise see *mercy*, *merchant*] 1 A dealer in small wares, or in merchandise of any sort

nor foresees the change, when the mercer has your woods for her velvets
B. Jonson, Epitaph, II, 1

mercerization (mër'sér-i-zā'shon), *n* [*< mercerize + -ation*] A process of treating cotton fiber or fabrics, invented by John Mercer, a Lancashire calico-printer, and patented in 1851. He discovered that the steeping of cotton cloth from ten to twenty minutes in caustic and syrupy potash lye, and then washing out the cloth with alcohol of specific gravity 0.825, caused the texture to contract one-tenth on drying, retaining 14.72 per cent of potash. If soda lye of specific gravity 1.342 is substituted for the potash, the cloth shrinks one-fourth and contains 9.68 per cent of soda. Water abstracts all the soda, and leaves the shrunken tissue, which takes more brilliant colors in dyeing than unmercerized calico. Also spelled *mercerization*

mercerize (mër'sér-iz), *v* t, pret. and pp. *mercerized*, ppr. *mercerizing* [*< Mercer* (see def. of *mercerization*) + -ize] To treat (cotton fiber or fabrics) with a solution of caustic alkali according to the method of mercerization. Also spelled *mercerise*

The microscopic examination of a mercerized cotton fiber shows it to have lost all its original characteristics
Sci. Amer., N. S., LVI, 241

mercership (mër'sér-ship), *n* [*< mercer + -ship*] The occupation or business of a mercer

One who is engaged in the business of buying commercial commodities and selling them again for the sake of profit, especially, one who buys and sells in quantity or by wholesale. One who buys without selling again, or who sells without having bought, as where one sells products of his own labor, or who buys and sells exclusively articles not the subject of ordinary commerce, or who buys and sells commercial articles on salary and not for profit, is not usually termed a *merchant*. Those who buy or sell on a commission for others are termed *commission-merchants*. In the law of bankruptcy, which forbids a discharge to merchants and traders who have not kept proper books of account, the term has a more extended meaning, having been held to include a livery-stable keeper who buys hay and grain and indirectly sells it by boarding horses, but not a broker who speculates in stocks.

Merchant Adventurers. See *adventurer* - **Merchant bar, merchant iron,** an iron bar which has been finished by passing through the *merchant* rolls. Puddled bars (see *puddle*) are worked into *merchant* iron or *merchant* bar by being cut into pieces of suitable length, which are then piled in packets, heated to a welding heat, and then hammered and rolled or rolled without hammering, into bars of suitable shape to be put upon the market. The amount of labor bestowed on this process depends on the quality of the iron it is dealt to produce. Puddled bars which have been rolled a second time are called "No. 2," and this is what is usually designated as *merchant* bar. It is the lowest quality of iron available for the general smith's use. If piled and rolled again, the product is called "No. 3." Another repetition of the process furnishes an article known as "best bar," and still another gives "trouble bar." - **Merchant captain or seaman,** a captain or seaman employed in the merchant service - **Merchant prince,** a merchant of great wealth

In *Rom. myth.*, the name of a Roman divinity, who became identified with the Greek *Hermes*. He was the son of Jupiter and Maia, and was the herald and ambassador of Jupiter. As a god of darkness, Mercury is the tutelary deity of thieves and tricksters, he became also the protector of herdsmen, and the god of science, commerce, and the arts and graces of life, and the patron of travelers and athletes. It was he who guided the shades of the dead to their final abiding place. He is represented in art as a young man, usually wearing a winged hat and the talaria or winged sandals, and bearing the caduceus or pastoral staff and often a purse

4†. [*l. c*] Warmth or liveliness of temperament, spirit, sprightly qualities, hence, liability to change, fickleness

He was so full of *mercury* that he could not fix long in any friendship, or to any design
Sp. Burnet

5 The innermost planet of the solar system. Its mean distance from the sun is 0.387 that of the earth. The inclination (7 degrees) and the eccentricity (0.206) of its orbit are exceeded only by some of the minor planets. Its diameter is only 3,000 miles, or about $\frac{1}{8}$ of that of the earth, its volume is to that of the earth as 1 to 185. It performs its sidereal revolution in 88 days, its synodical in 116. Its proximity to the sun prevents its being often seen with the naked eye. The mass of Mercury, though as yet not very precisely determined, is less than that of any other planet (asteroids excepted). According to Schiaparelli it rotates on its axis in the same way as the moon does, once in each orbital revolution

6. [*l. c*] Chemical symbol, Hg, atomic weight, 200. A metal of a silver-white color and brilliant metallic luster, unique in that it is fluid at ordinary temperatures. It becomes solid, or freezes, at about -40° , and crystallizes in the isometric system. Its specific gravity at 0° is 13.6, when frozen, according to J. W. Mallet, 14.1922. This metal occurs native, sometimes in considerable quantity, but by far the largest supply is obtained from the sulphid, known as *cinabab* (see *cinabab*). Mercury is not very generally disseminated. In the United States only traces of its ores have been found to the east of the Cordilleras. The principal sources of supply are the mines of Almaden in Spain of New Almaden and others near the Bay of San Francisco, and of Idria in Austria. Its chief use is in the metallurgical treatment of gold and silver ores by amalgamation. The thermometer and barometer are instruments in which the peculiar qualities of this metal are well illustrated. Commercially the most important salts of mercury are mercurous chloride (Hg_2Cl_2) or calomel, chiefly used in medicine, and the mercuric chloride (HgCl_2) or corrosive sublimate, a violent poison used in medicine and extensively in surgery as an antiseptic, and as a preservative in dressing skins, etc., being a very powerful antiseptic. The sulphid (HgS) or cinabab, when prepared artificially, is called *vermillion*, and is used as a pigment. The names *mercury* and *quicksilver* are entirely synonymous, but the former is rather a scientific designation, and one necessarily used in compound names and in the adjective form, while the latter is a common popular designation of this metal. See *amalgam*, *calomel*, *quicksilver*

7. [*l. c.*] The column of quicksilver in a thermometer or barometer, especially with reference to the temperature or state of the atmosphere shown by it. [Colloq.]

Whatever may be the height of the mercury (in the barometer), a sudden and rapid fall is a sure sign of foul weather. *R. Strachan*, in *Modern Meteorology*, p. 80.

8. [L. c.] (a) A plant of the genus *Mercurialis*, chiefly *M. perennis*, the dog's-mercury, locally called *Kentish balsam* (which see, under *Kentish*), and *M. annua*, the annual or French mercury. See *Mercurialis*. (b) In older usage, the *Chenopodium Bonus-Henricus*. See *allgood* and *good-King-Henry*. This is the *English, false, or wild mercury*—*9*. In *her.*, the tincture purple, when blazoning is done by the planets—*Argent mercury*. See *agometer*.—*Mercury air-pump*, an apparatus used for producing a vacuum, consisting essentially of a reservoir above from which mercury flows down through a small vertical tube, the vessel to be exhausted being attached at the side (at *C* in the figure) at a height something more than 30 inches above the lower receptacle. The descending drops of mercury carry with them portions of the air or other gas from the receiver, and if the process is long continued, the supply vessel at the top being kept full, a nearly perfect vacuum may be obtained. This form of air pump is often called a *Sprengel pump*. It gives a much higher degree of exhaustion than is possible with the ordinary mechanical air pump, and is much used not only in physical experiments but also for practical purposes, for example in removing the air from the glass bulbs of the incandescent electric lamps.—*Mount of Mercury*, in *palmy*, the pure metal found in the form of globules in cavities of the ores of this metal.—*Three-seeded mercury*, a plant of the genus *Acalypha*, of the same family as *Mercurialis*, and more or less similar in appearance. The fruit splits into three two-valved one-seeded nutlets. It is a large genus, chiefly tropical or sub-tropical. Many of the species are shrubby, a few (mostly herbaceous) are found in the United States.—*Transit of Mercury*, a passage of Mercury over the disk of the sun.—*Vegetable mercury*, a Brazilian plant, *Franciscana uniflora*, also called *manaca*. See *Franciscana*.

Hooded Merganser (*Lophodytes cucullatus*)

of the genus *Mergus* or subfamily *Mergina*, fam-
ily *Anatida*, a sawbill, garbill, or fishing-duck

A merganser resembles a duck, but has a cylindrical instead
of a depressed bill, with a hooked nail at the end, and a sar-
ration of very prominent back-set teeth. Several species
are among the common water fowls of the northern hemi-
sphere. The common merganser or goosander, *Mergus mer-*
ganser or *Merganser cautor*, is about 2 feet long, and nearly
3 in extent of wings. In the male the upper parts are glossy
black varied with white on the wings, the lower parts white
tinged with salmon-color, the head and neck glossy dark
green like a drake's, and the bill and feet coral or vermilion
red. The head is slightly crested. The red breasted mer-
ganser, *M. serrator*, is a similar but somewhat smaller
bird, with a reddish breast and the head more decidedly
crested. The hooded merganser, *Lophodytes cucullatus*, is
still smaller, black and white, with a beautiful erect semi-
circular crest. A South American species, distinct from
any of the foregoing, is *Mergus brasiliensis*

who or that which merges

merger² (mēr'jēr), *n* [*< OF* *merger*, inf. as
noun, a merging see *merge*] **1** In the law of
conveyancing, the sinking or obliteration of a
lesser estate in lands, etc., resulting when it is
transferred without qualification to the owner
of a greater estate in the same property (or the
like transfer of the greater estate to the owner
of the lesser), if there be no intermediate estate.
At common law the lesser estate was not deemed to be added
to the greater, but to be extinguished, so as to free the
greater estate from the qualification or impairment which
the existence of the lesser estate had constituted. Thus,
if an owner of the fee of land on which there was an out-
standing lease, owned by another person, acquired the
lease, the lease was thereby annulled, and he thereafter
held simply as owner of the fee. It resulted sometimes
that, if his title to the fee proved defective, he could not
avail himself of any claim under the lease

Merger is the act of law, and is the annihilation of one
estate in another. Its effect is to consolidate two estates,
and to conform them into one estate

In the *meridian* of Edward's age and vigour.

Hallam, Middle Ages, III 8.

4. A great circle of a sphere passing through the poles, or the half of such a circle included between the poles; in *geog.*, such a circle drawn upon the earth; in *astron.*, such a circle on the celestial sphere. The meridian of a place on the earth's surface is the great circle passing through it and the poles, or the great circle of the celestial sphere passing through the pole and the zenith of the place. See *longitude*.

5. Figuratively, the state or condition (in any respect) of the people of one place or region, or of persons in one sphere or plane of existence, as compared with those of or in another as, the institutions or customs of Asia are not suited to the *meridian* of Europe.

All other knowledge merely serves the concerns of this life, and is fitted to the *meridian* thereof.

Sir M. Hale, Orig. of Mankind

First or prime meridian, the meridian from which longitude is reckoned as that of Greenwich. See *longitude*, 2. — **Magnetic meridian** of any place, a great circle the plane of which passes through that place and the line of direction of the horizontal magnetic needle. The angle which the magnetic makes with the true geographical meridian is different in different places and at different times, and is called the *magnetic declination* or the *variation of the compass*. See *declination*, and *agonic line* (under *agonic*). — **Meridian of a globe**, a meridian drawn upon a globe, especially, a brass circle concentric with the globe, and having the axis of rotation of the globe fixed in the plane of one of its faces. — **Secondary meridian**, in *geog.* a meridian whose longitude from the prime meridian has been so well determined that trustworthy longitudes may be ascertained by measuring from it.

meridian-circle (mē-rīd-i-an-ser'kl), *n.* An astronomical instrument consisting of a telescope with cross-wires and moving in the plane of the meridian, and provided with a graduated circle. The meridian circle subserves the same purposes as the transit-instrument, and also determines the declinations of stars.

meridian-mark (mē-rīd-i-an-mārk), *n.* A mark placed exactly north or south of a transit-instrument at a considerable distance, to aid in adjusting the instrument in the meridian. It is sometimes placed near with a lens interposed to render the rays from it parallel as if it were really remote.

meridies (mē-rīd-i-ēz), *n.* [L. see *meridian*]

Chaucer, Astrolabe, I 4

4. Characteristic of southern climates or southern peoples.

A dark *meridional* physiognomy.

Motley, United Netherlands, I 130

Meridional distance. See *distance*. **Meridional parts**, the distance of any given latitude from the equator upon Mercator's map-projection expressed in minutes of the equator. Neglecting the compression, the meridional parts are proportional to the integral of the secant of the latitude, which is the logarithm of the tangent of half the polar distance. Taking account of the compression, the secant of the latitude must be divided before integrating by $1 + e^2 \cos^2 \phi$ (where ϕ is the latitude and e the ellipticity of the meridian).

meridional (mē-rīd-i-ō-nal'i-ti), *n.* [ME. *meridional* + *-ity*] *1.* The state of being meridional or on the meridian. — *2.* Position in the south, aspect toward the south.

of the merino sheep as, *merino* stockings or underclothing. The articles so designated are usually made with an admixture of cotton to prevent shrinkage.

Merino sheep, a variety of sheep originally peculiar to Spain, but now introduced into many other countries. They are raised chiefly for the sake of their long fine wool, the mutton being but little esteemed. In summer the Spanish sheep feed upon the cultivated lands of Biscay, Navarre, and Aragon, and toward winter are driven southward to the fertile plains of New Castile, Andalusia, and Estremadura.

II. *n.* *1.* A merino sheep. — *2.* A thin woollen cloth, twilled on both sides and used especially for women's dresses, now to some extent superseded by cashmere. It was originally made of the wool of the merino sheep. There is a variety which has an admixture of silk.

3. A variety of tract or knitted material for undergarments. [U. S.]

merion (mē-rī-on), *n.* [= F *merione*, < NL. *Meriones*, q. v.] A book-name of the deer-mouse or jumping-mouse of North America, *Zapus hudsonius*, formerly placed in the genus *Meriones* under the name of *M. hudsonius*. See cut under *deer-mouse*, 1.

Meriones (mē-rī-ō-nēz), *n.* [NL, so called with ref. to the development of the hind legs (cf Gr *μυρία*, a man's name, companion of Idomeneus), < Gr *μυρία*, thigh-bones, < *μυρος*, thigh] A genus of saltatorial myomorph rodents. The name has been applied (a) By Illiger, 1811, to the Old World jerboa as a synonym of *Dipus*. (b) By Kretz, 1825, to a different genus of American jumping mice, now called *Zapus*. [Disputed in both senses.]

meris (mē-ris), *n.* [ME. *meris*, < NL. < F *meride* (Perrin), < Gr *μερίς* (*meris*), a part] A permanent colony of cells or plastids, which may remain isolated or may multiply by gemmation to form higher aggregates called *demes*. See *deme* and *zooid*. *Lucy Brit*, XVI 842

merispor (mē-rī-spōr), *n.* [Gr *μερίς* or *μερίς*, a part, division, + *σπόρα*, seed] One of the individual cells or secondary spores of a pluricellular (separate or compound) spore.

meristem (mer-i's-tem), *n.* [Irreg. < Gr *μεριστός*, verbal adj. of *μερίζω*, divide, < *μερίς*, a part] Actively dividing cell-tissue, the unformed and growing cell-tissues found at the ends of young stems, leaves, and roots. In structure the cells of the meristem are characterized by having a delicate homogeneous membrane which is only rarely thickened, and homogeneous granular protoplasm with a nucleus. It is distinguished as *primary meristem* when it forms the first foundation of a member, or the cells which develop into

the various tissue elements, and which ordinarily soon lose the power of independent growth, and *secondary meristems*, in which the tissue elements retain during their life the properties of typical cells, consisting of a closed cell membrane with active protoplasm, a nucleus, and cell contents. They retain the power of independent growth, and a meristem may arise from them at any time.

Merlucidae (mēr-lū-sī'dē), *n. pl.* [NL, *< Merlucius + -idae*] In Gill's system of classification, a family of *Gadoidae* or gadoid fishes, represented by the genus *Merlucius*. The caudal region is moderate and coniform behind, the caudal rays are procurvent forward, the anus is submedian, the suborbital bones are moderate, the mouth is terminal, the ventral fins are subangular, the dorsal fin is double, a short anterior and a long posterior one, there is a long anal fin corresponding to the second dorsal, the ribs are wide, approximated and channeled below, or with inflected sides, and there are paired excavated frontal bones with divergent crests continuous from the forked occipital crest. The family includes the English hake and related fishes.

merlucine (mēr-lū-sī-n), *a* and *n.* I. *a* Pertaining to the *Merlucidae*, or having their characters.

II. *n.* A gadoid fish of the family *Merlucidae*. **merlucoid** (mēr-lū-sī-oid), *a*. Like a hake, or of pertaining to the *Merlucidae*.

Merlucius (mēr-lū-sī-us), *n.* [NL, *< F. merluce, merlus, OF. merlus, merluz (= Sp. merluza = It. merluzzo, the hake), dried haddock, < mur-lus, haddock, according to Ménage, < L. mar-lucius, ocean pike maris, gen. of mare, the sea, lucius, a fish, perhaps the pike: see luce¹*] A genus of fishes represented by the common hake of Europe, *M. merluccius* or *vulgaris*, and type of the family *Merlucidae*. Also spelled *Merlucius*. **mermaid** (mēr'mād), *n.* [*< ME. mermayde, mermayde, < mero¹ + maid. Cf. mermaid.*] A fabled marine or amphibian creature having the form of a woman above the waist and that of a fish below, endowed with human attributes, and usually working harm, with or without malignant intent, to mortals with whom she might be thrown into relation.

Mermis (mēr'mis), *n.* [NL, *< Gr. μέρμις, a cord, string.*] The typical genus of *Mermithidae*. *M. negrescens* and *M. alba* are examples.

Mermithidae (mēr-mith'ī-dē), *n. pl.* [NL, *< Mermis (Mermith-) + -idae*] A family of nematoid worms, typified by the genus *Mermis*, belonging to the order *Gordaceae*, the land-hairworms. They are apterous *Nematoidae*, with a very long filiform body and six oral papillae, the male having two spicules and three rows of papillae on the broadened caudal region. The worms in their larval state are parasitic, like the true gordians, being found in the bodies of various insects. When mature they live in the ground, and sometimes swarm to the surface in such numbers as to give rise to the vulgar belief that it has rained worms. Also *Mermithidae*, *Mermithae*.

meroblast (mēr'ō-blāst), *n.* [*< Gr. μέρος, a part (see merit), + βλαστός, a germ.*] In *embryol.*, a meroblastic ovum; an egg or ovum containing food-yolk or nutritive protoplasm besides the formative or germinal protoplasm, distinguished from *holoblast*.

meroblastic (mēr'ō-blas'tik), *a.* [*< meroblast + -ic*] In *embryol.*, partially germinal, applied by Remak to those eggs in which there is much food-yolk which does not undergo segmentation or take part in germination, opposed to *holoblastic*. Birds, reptiles, most fishes, and most invertebrates have meroblastic eggs.

merocoele (mēr'ō-sē), *n.* [*< Gr. μέρως, thigh, + κόη, tumor.*] Femoral hernia. See *hernia*. **merocerite** (mēr'ō-sē-rit), *n.* [*< Gr. μέρως, thigh, + κέρως, horn, + -ite²*] In *Crustacea*, one of the joints of an antenna, borne upon the ischioerite. See *antenna*.

meroceritic (mēr'ō-sē-rit'ik), *a.* [*< merocerite + -ic*] Of the nature of a merocerite.

merogastrula (mēr'ō-gas'trō-lā), *n., pl.* *merogastrulae* (-lā). [NL, *< Gr. μέρος, a part, + NL. gastrula, q. v.*] The gastrula, of whatever form, of a meroblastic egg. It is a discogastrula if the partial segmentation is discoidal, a perigastrula if the segmentation is superficial as well as partial.

merogenesis (mēr'ō-jen'ē-sis), *n.* [NL, *< Gr. μέρος, a part, + γένεσις, generation: see genesis.*] In *biol.*, segmentation, origination of the segments of which an organized body may consist. *Encyc. Brit.*, XXIV. 183.

merogenetic (mēr'ō-jen'ē-tik), *a.* [*< merogenesis, after genesis.*] Pertaining to, characterized by, or exhibiting merogenesis.

merohedral (mēr'ō-hē'dral), *a.* [*< Gr. μέρος, a part, + ὅρα, seat, base, + -al*] In *crystal.*, same as *hemihedral*.

merohedrium (mēr'ō-hē'drī-um), *n.* [As *merohedral* + -ium] Same as *hemihedrium*.

merostic (mēr'ō-sis'tik), *a.* [*< Gr. μέρος, a part, + στίς, egg (ovum), + -istic*] Secreting not only ova, but also vitelligenous cells, applied to the ovaries of insects. See *ovostic*.

Dr. A. Brandt has proposed the term panostic for ovaries of the first mode, and merostic for those of the second and third modes of development.

Huxley, Ann. Invert., p. 381.

meromorph (mēr'ō-mōrf), *a.* Same as *meromorphous*.

meromorphic (mēr'ō-mōrf'ik), *a.* [*< Gr. μέρος, part, fraction, + μορφή, form.*] Similar in nature to a rational fraction. — **Meromorphic function**, in the theory of functions, a function which, so long as the variable remains within a certain part of the plane of imaginary quantity within which the function is said to be meromorphic, varies continuously, has a derivative, and is monotonic except in going round certain points or isolated values of the variable called *poles*, at which the function becomes infinite. The function is, therefore, of the nature of a fraction whose numerator and denominator may be infinite series. An older name is *fractionary function*.

Meromyaria (mēr'ō-mī-ā-ri-ā), *n. pl.* [NL, *< Gr. μέρος, a part, + μύς, a muscle, + -aria.*] One of the three principal divisions of the *Nematodea*, containing those threadworms which have only eight longitudinal series of muscle-cells, two between each dorsal and ventral line and lateral area respectively. See *Polymyaria*, *Holomyaria*.

meromyarian (mēr'ō-mī-ā-ri-ān), *a.* [*< Meromyaria + -an*] Of or pertaining to the *Meromyaria*.

meroparonymy (mēr'ō-pa-ron'ī-mī), *n.* [*< Gr. μέρος, a part, + παρωνυμία, paronymy: see paronymy.*] Partial paronymy, adoption or naturalization of a Latin or Greek word in only one or two modern languages. *Buck's Handbook of Med. Sciences*, VIII. 519. [*Hare*].

Meropidae (mēr'ō-pī-dē), *n. pl.* [NL, *< Merops + -idae*] An Old World family of tenebrionid picean birds, typified by the genus *Merops*, the bee-eaters or apaposts. They have short notogaster, the bill long, slender, and acute, the sternum four notched behind the carotid angle, the mesocephalon nude, and a spinal aperture. The range of the family is extensive, including the Palearctic, Ethiopian, Oriental, and Australasian regions. The family contains upward of 30 species, divided into several genera, and by Gray into 2 subfamilies, *Nycturnathura* and *Meropinae*. See cut under *bee-eater*.

meropidan (mēr'ō-pī-dān), *a* and *n.* I. *a* Pertaining to the *Meropidae*, or having their characters.

II. *n.* A bird of the family *Meropidae*.

Meropinae (mēr'ō-pī-nē), *n. pl.* [NL, *< Merops + -inae*] The leading subfamily of *Meropidae*, containing nearly all the species.

meropodite (mēr'ō-pō-dīt), *n.* [*< Gr. μέρος, thigh, + ποδ- (pod-) = E. foot, + -ite²*] The fourth joint of a developed endopodite, between the ischiopodite and the carpopodite. See cut under *endopodite*.

meropoditic (mēr'ō-pō-dīt'ik), *a.* [*< meropodite + -ic*] Of the nature of a meropodite, as, the meropoditic segment of the leg.

Merops (mēr'rops), *n.* [NL, *< L. merops, < Gr. μέρος, a bird, the bee-eater, appar. the same as μέρος, speaking, endowed with speech, < μέρος, a part, μέρος, divide, + ὄψ, voice.*] The typical genus of *Meropidae*. Birds of this genus are of lithe and slender form, somewhat like that of the swallow, which they also resemble in their mode of flight. The bill is long and slender, the wings are long and pointed,

the tail has the two middle feathers lengthened, and the plumage is beautifully variegated with bright colors. They prey on insects, especially bees, wasps, and other hymenoptera, which they capture on the wing. There are several species, the best-known of which is *M. apiculator*, the only one of general distribution in Europe, though a second, *M. aegyptius*, is also found in parts of Europe. See *bee eater*. Also called *Apiculator*.

merorganization (me-'rō-'gan-'i-'vā-'shon), *n* [*<* Gr *μέρος*, part, + *E organization*] Organization in part, or partial organization. [Rare] **meros**, **merus** (mē-'ros, -us), *n* [*<* NL, *<* Gr *μέρος*, thigh] 1 In *zool*, one of the joints of a maxilliped. — 2 In *anat*, the thigh, femur, or femoral segment of the hind limb, extending from the hip to the knee, and corresponding to the brachium of the fore limb.

merosomal (mer-'ō-sō-mal), *a* [*<* *merosome* + *-al*] Of the nature of a merosome.

merosome (mer-'ō-sōm), *n* [*<* Gr *μέρος*, a part, + *σώμα*, body] In *zool*, one of the definite successive parts or segments of which the body is composed, a metamere, a somite. Thus, one of the rays of a starfish, or one of the rings of a worm or crustacean, is a *merosome*.

Merostomata (mer-'ō-stō-'mā-'tā), *n*, *pl* [*<* NL, *<* Gr *μέρος*, a part, + *στόμα*, mouth] A group of articulated animals to which various values and limits have been assigned. (a) Named by De Blainville as an order of crustaceans, containing the horseshoe crabs, together with certain heterogeneous forms. (b) Extended to the *Limulidae* and the *Eurypteridae*. (c) Extended to the *Limulidae*, *Eurypteridae*, and *Trilobita*, as a class of crustaceans synonymous with *Gigantotracia* and with *Palaeoarida*. (d) Having the same limits as (c), but associated with the *Arachnida*. (e) Restricted, as an order of crustaceans, to the *Limulidae* synonymous with *Xiphonera*. (f) Restricted, as an order of *Gigantotracia* to the *Eurypteridae*, and synonymous therewith. See *Paleozoologia*. *Hemalobranchia* is a synonym.

merostomatous (mer-'ō-stōm-'u-tus), *a* [*<* *Merostomata* + *-ous*] Pertaining to the *Merostomata*, or having their characters.

merostome (mer-'ō-stōm), *n* One of the *Merostomata*, as a trilobite or a horseshoe-crab.

merostomous (mer-'ō-stō-'mō-sus), *a* [*<* *merostome* + *-ous*] Same as *merostomatous*.

-merous. [*<* Gr *-μερής*, combining form of *μέρος*, a part] A suffix denoting 'parted,' 'divided into parts' often used in botany with a numerical prefix, as 2-*merous*, 3-*merous*, etc., to be read *dimerous*, *trimerous*, etc., according to the Greek.

Merovingian (mer-'ō-vin-'jī-an), *a* and *n* [= F *Merovingien*, *<* ML *Merovingi*, the descendants of *Meroveus*, an ancestor of the founder of the dynasty, *<* OIG **Merowig* or *Merwig*] 1 A taking name from Merowig or Merwig (L *Meroveus*), an alleged chief or king of a part of the Salian Franks and grandfather of Clovis, as, the *Merovingian* race, dynasty, or period. (Clovis in vading the Roman part of Gaul in A. D. 486 founded the Merovingian or first race of French kings (several often reigning at the same time in different parts of France), which was succeeded by the Carolingian dynasty in 751 or 752. Some suppose *Merowig* or *Meroveus* to have been the patronymic of the family or clan of Clovis, derived from a more remote ancestor. — *Merovingian writing*, a variety of cursive script full of flourishes and difficult en-lacements and combinations of letters, peculiar to the Merovingian period in France, used in many documents still in existence.

The writing of the Frankish empire to which the title of *Merovingian* has been applied had a wider range than the other national hands. It had a long career both for diplomatic and literary purposes. In this writing, as it appears in documents, we see that the Roman cursive is subjected to a lateral pressure so that the letters received a curiously cramped appearance while the heads and tails are exaggerated to inordinate length.

Knapp, *Hrt*, XVIII 167

II *n* A member of the family to which the first dynasty of French kings belonged. See I. **meroxene** (me-'rōk-'sēn), *n* [*<* Gr *μέρος*, a part, + *ξένος*, strange, foreign] A variety of the kind of mica called *biotite*, distinguished by its optical characters. See *biotite* and *mica*. The name was early given by Breithaupt to the Vesuvian *biotite*, but has recently been limited by Tschermak to those kinds of *biotite* in which the optic axial plane is parallel to the plane of symmetry.

merpeople (mer-'pē-'pl), *n*, *pl* [*<* *mer-* (in *mermaid*, *merman*) + *people*] Fabled inhabitants of the sea with a human body and a fish-like tail, a collective name for mermaids and mermen. *Gill*, *Forum*, III 85.

merret, *t* A Middle English form of *marl*. **merrify** (mer-'i-fī), *v*, *t*, pret and pp *merrified*, ppi *merrifying* [*<* *merry* + *-fy*] To cause to be or become merry. [Rare]

Mesembryanthemes (me-sem'brī-an-thē'mā-ē), *n* pl [NL (Fenzl, 1835), < *Mesembryanthemum* + -es] A tribe of dicotyledonous polypetalous plants of the natural order *Ricoidae*, characterized by having leaves without stipules, and the tube of the calyx adherent to the ovary. It includes 2 genera, *Mesembryanthemum*, the type, and *Tetragonia*, and about 330 species, which, although having a wide range, abound principally in the southern part of Africa. The group was originally regarded as an order. Sometimes written *Mesembryaceae* and *Mesembryaceae*.

Mesembryanthemum (me-sem'brī-an-thē'mum), *n* [NL (Dillenius, 1719), prop **Mesembryanthemum*, < (Gr. *mesembrya*, midday, the south (< *μέσος*, middle, + *ἡμέρα*, day), + *ἄνθος*, a flower, < *άνθος*, bloom, < *άνθος*, a flower see *anther*] A large genus of dicotyledonous polypetalous plants of the natural order *Ricoidae*, the fig-marigold family, type of the tribe *Mesembryanthemeae*. They are erect or prostrate fleshy herbs, some times slightly woody, with thick fleshy leaves and showy white, yellow, or rose-colored flowers in terminal or axillary clusters. The fruit is a capsule, which is hygroscopic, swelling out and opening in the rain, and so allowing the seeds to escape. The genus embraces some 800 species, reaching by far its greatest development in South Africa, a few species, mostly littoral, being scattered in the Canaries, the Mediterranean region, Australia, etc. A general name for the species is *fig marigold*, also *midday flower* and *pig's face*. *M. crystallinum* is the ice plant (which see). *M. acutifolium* and *M. edule* of South Africa are called *Hottentot fig*. *M. dolabriforme* is the hatchet-leaved fig marigold (see cut under *dolabriform*). See *dog's-chop*, *cat chop*, and *fig*.

mesenteronic (mes-en-tē'-ron'ik), *a* [Gr. *mesenterion* + -ic] Of or pertaining to the mesenteron

mesentery (mez'en-ter-i), *n*, pl *mesenteries* (-iz) [Gr. *mesenterion*, < (Gr. *μέσος*, middle, + *έντερον*, intestine see *enteron*)] 1 In anat., a fold or duplicature of peritoneum investing the intestine or other abdominal viscera wholly or in part, and serving to retain such viscera in its proper position in the abdominal cavity. It consists of two layers of peritoneum, separated in that part of their extent which is wrapped around the viscera, in the rest of their extent lying closely apposed, but still having between them the vessels, nerves, and lymphatics which go to the viscera, together with, usually, a quantity of fat. In man the mesentery of the intestine is connected by its root to the spinal column for a distance of about six inches, from the left side of the second lumbar vertebra to the right sacro-iliac synchondrosis, its breadth, or the distance from the vertebra to the intestinal border, is about four inches. The term *mesentery* is sometimes restricted to the reflection of peritoneum which keeps the small intestine in position, in which case the similar foldings about other viscera have special names, as *mesocaecum*, *mesocolon*, *mesoduodenum*, *mesogastrium*, *mesometrium*, *mesorchium*, *mesorectum*, *mesovarium*. See these words. Also *mesarac*.

2 In *zool*, some structure like a mesentery, a perivisceral or mesenteric septum. (a) In *Actinozoa*, one of the several membranous partitions which radiate from the wall of the gastric sac to that of the body vertically across the somatic or perivisceral cavity, which is thus divided into a corresponding number of mesenteric chambers. (b) In sundry other invertebrates, as annelids, one of the membranous or muscular septa which may subdivide the perivisceral cavity into several partly separate chambers.

mesepimeral (mes-e-pim'e-ral), *a*. [Gr. *mesepimeron* + -al] Of or pertaining to the mesepimeron

mesepimeron (mes-e-pim'e-ron), *n*, pl *mesepimeria* (-rā) [NL, < (Gr. *μέσος*, middle, + NL *epimeron*, q. v.)] In *entom.*, the epimeron of the

mesothorax; the epimeral sclerite of the mesopleuron.

mesepisternum (mes-ep-i-stēr'num), *n*; pl *mesepisterna* (-nā) [NL, < (Gr. *μέσος*, middle, + NL. *episternum*, q. v.)] In *entom.*, one of the mesothoracic episterna.

meseraic, *meseraical*. Erroneous forms of *mesarac*, *mesaraical*.

mesmerism (mez'mér-izm), *n.* [*< F mesmerisme* (Sp. P. It. *mesmerismo*), so called from Friedrich Anton (or Franz) Mesmer (1733–1815), a German physician, who propounded the theory in 1778, in Paris] 1 The doctrine that one person can exercise influence over the will and nervous system of another, and produce certain phenomena by virtue of a supposed emanation, called *animal magnetism*, proceeding from him, or simply by the domination of his will over that of the person operated on. Original by Mesmer professed to produce his results by the operation of actual magnets, but all such apparatus has long been abandoned and those who profess belief in magnetism as the cause of the phenomena exhibited refer it to the body of the mesmerist. The actual phenomena believed to be produced by this so-called animal magnetism are now explained by modern hypnotism, or artificial somnambulism, which within recent years has been the subject of extended research. It is now generally admitted that there is no force of any kind transmitted from the operator to the person operated upon, and many of the pretensions of mesmerism, such as clairvoyance, are rejected. The term *mesmerism* is still popularly used, often more or less synonymously with *hypnotism*, but more frequently in its original or allied sense. Other terms used more or less synonymously with either *mesmerism* or *hypnotism* are *bravism* (after the English surgeon Braxid, who first studied the phenomena of mesmerism scientifically) and *neurohypnotology*.

By one of my usual processes for reducing the cataleptic state of muscles during hypnotism or *mesmerism*, I was enabled, in a few seconds, to unlock her jaws and open her mouth. Brad., France, p. 59.

2 The influence itself, animal magnetism.

mesmerist (mez'mér-ist), *n.* [*< mesmer (ice) + -ist*] One who practices mesmerism.

mesne (men), *a.* [An archaic spelling of *mesne* (ME *meue*, *< OF mesne*, etc.), retained in law use] In *law*, middle; intervening, intermediate. A *mesne lord* was a feudal lord who held land of a superior, but had granted a part of it to another person. Thus, he was a *tenant to the superior* but *lord or superior* to the second grantee, and thus his *mesne* or *mediate lord*.

They rank from the rank of tenants in chief to the rank of *mesne* tenants.

E. A. Freeman, Norman Conquest, IV, 28.

Mesne conveyance See *conveyance* — **Mesne encumbrances**, encumbrances the right of priority of which is intermediate to the dates of two other encumbrances or titles under consideration — **Mesne process**, any process in a suit which intervenes between the original process of writ and the final execution — **Mesne profits**, the profits of an estate which accrue to a tenant in possession intermediate between two dates particularly the commonment and the termination of a possession held without right.

mesoarial (mes-o-ā'1-1-al), *a.* [*< mesoarion + -al*] Of or pertaining to the mesoarion. Encyc. Brit., XII, 660.

mesoarion (mes-o-ā'1-1-um), *n.*, pl *mesoarion* (-a) [NL, *< Gr μέσος + αριον*, dim. of *φόν*, egg Cf. *mesovarium*] A fold of the peritoneum forming the mesentery of the ovary or genital gland of some animals, as fishes; a mesovarium.

The genital glands overlie the kidneys each being suspended by a fold of mesentery (*mesoarion*).

Huxley and Martin, Elementary Biology, p. 51.

mesoblast (mes'ō-blast), *n.* [*< (th) μέσος*, middle, + *βλαστος*, a germ] The middle one of the three germinal layers of any metazoic embryo, between the epiblast and the hypoblast, the mesoderm. It corresponds to the *vascular layer* of an earlier nomenclature, when the other two layers were called *serous* and *mucous*. By far the greater part of the body of a metazoic animal is derived from the mesoblast.

mesoblastema (mes'ō-blas-tē'ma), *n.*, pl *mesoblastemata* (-mā-ta) [NL, *< Gr μέσος*, middle, + *βλαστέμα*, a shoot, a sprout see *blastema*] The mass or layer of cells which constitutes the mesoblast, the mesoderm in its early germination.

mesoblastemic (mes'ō-blas-tēm'ik), *a.* [*< mesoblastema + -ic*] Of or pertaining to the mesoblastema as, *mesoblastemic cells* or tissue.

mesoblastic (mes-o-blas'tik), *a.* [*< mesoblast + -ic*] Of or pertaining to the mesoblast as, a *mesoblastic cell*, the *mesoblastic layer*.

mesobranchial (mes-ō-brang'ki-al), *a.* [*< Gr μέσος*, middle, + *βραγχία*, gills see *branchial*] Overlying the middle of the branchial chambers applied specifically to a median subdivision of the branchial region of the carapace of a crab, called the *mesobranchial lobe*. See cut under *Brachyura*.

mesocæcal (mes-ō-sē'kal), *a.* [*< mesocæcum + -al*] Of or pertaining to the mesocæcum.

mesocæcum (mes-o-sē'kum), *n.*, pl *mesocæca* (-kē) [NL, *< Gr μέσος*, middle, + NL *cæcum*, q. v.] The mesentery of the cæcum and vermiform appendage, the special peritoneal fold which sometimes holds those parts in place.

mesocarp (mes'ō-karp), *n.* [= F. *mesocarpe*, *< NL mesocarpium*, *< Gr μέσος*, middle, + *καρπός*, fruit] In *bot.*, the middle layer of a pericarp when it is possible to distinguish three dissimilar layers, the *sarcocarp*. It is the fleshy substance or edible part of fruits which lies between the epicarp and the endocarp. See cuts under *drupe* and *endocarp*.

Mesocarpacae (mes-ō-kar-pā'sē-ē), *n.* pl. [NL, *< Mesocarpus + -aceae*] One of the three

Mesites variegata

have caused it to be classed with thrushes, pigeons, gallinaceous birds, rails, herons, etc. The nearest relatives of *Mesites* are the sun bitterns (*Eurypyga*) and the kagus (*Rhinoceros*). (See cuts under *Eurypyga* and *kagu*.) *M. variegata* is cinnamon brown varied with black. The genus was founded by Isidore Geoffroy St. Hilaire in 1848. It is also called *Mesitornis* and *Mesornis*.

2. In *entom.*, a genus of beetles of the family *Calandridae*, of wide distribution and few species. They abound in Madeira and the Canary Islands, breeding in decaying and dead euphorbias and laurels. Two species occur in the United States, *M. nubilundris* and *M. ruficollis*.

3. A genus of fishes same as *Galaxias*. Jenyns, 1842 — 4. A genus of echinoderms.

Mesitidae (me-sit'1-dē), *n.* pl. [NL, *< Mesites + -idae*] A family of gallatorial birds, represented by *Mesites*, and related to the *Eurypyga* and *Rhinoceros*, but not to the *Eupetidae*. Also *Mesitinae*, as a subfamily of *Eupetidae*.

mesitine-spar (mes'1-tin-spär), *n.* [*< mesitine* (*< Gr μεσίτης*, a mediator, lit. being in the middle, + *-me*²) + *spar*²] A carbonate of magnesium and iron intermediate between magnesite and siderite, occurring in yellowish rhombohedral crystals at Traversella in Piedmont.

families of algae into which the group *Conjugata* is divided. The sexual reproduction is by a process of conjugation, which may be either scalariform (that is, between two or several cells of two different filaments) or lateral (that is, between two adjacent cells of the same filament). The result of this conjugation is the production of a globular zygospore, which differs from that produced by the *Zygnemataceae* in that immediately after its formation it divides into two, three, or more cells, the central one only of which is fertile. Sometimes *Mesocarpineae* See *Conjugata*.

Mesocarpus (mes-ō-kar'pus), *n* [NL (Hassall, 1845), < Gr *μῆσος*, middle, + *καρπός*, fruit] A genus of fresh-water algae, typical of the family *Miscocarpaceae*. The copulation is scalariform, and the spores are spherical or oval, between two cylindrical, straight, or slightly lobed cells.

mesocephalic (mes-ō-se-fal'ik or -sef'a-lik), *a* [*<* Gr *μῆσος*, middle, + *κεφαλή*, head, + *-α*] 1. In *cranium*, of medium size; neither large nor small, with a capacity of from 1,350 to 1,450 cubic centimeters.

A skull of variable form, mostly *mesocephalic*.
W H Flower, Pop Sci Mo, XXVIII 317

2. Having a skull of medium breadth or capacity.

mesocephalism (mes-ō-sef'a-lizm), *n*. [*<* *mesocephalic* + *-ism*] The character or state of being mesocephalic. Also *mesocephaly*.

Departures from a width of eight and length of ten (*mesocephalum*), measured from one auricular aperture over the head to the other, and none root over the head to the nucha, determine whether the skull shall be considered long. Amer Nat, XXII 614

mesocephalon (mes-ō-sef'a-lon), *n*, pl *mesocephala* (-lā) [NL, < Gr *μῆσος*, middle, + *κεφαλή*, head.] Same as *mesencephalon*.

mesocephalous (mes-ō-sef'a-lus), *a* [*<* Gr *μῆσος*, middle, + *κεφαλή*, head, + *-ους*] Mesocephalic.

mesocephaly (mes-ō-sef'a-li), *n*. Same as *mesocephalism*.

mesochil (mes-ō-kil), *n* [*<* NL *mesochilum*, *q v*] Same as *mesochilium*.

mesochilium (mes-ō-kil'i-um), *n* [NL, < Gr *μῆσος*, middle, + *χείλος*, lip] The intermediate part of the lip of such orchids as have this organ separated into three distinct parts. Lindley, Treasury of Botany

mesochorus (me-sok'ō-rus), *n* [*<* Gr *μεσώχρος*, chorus] Same as *coryphæus*, 1.

mesocælia (mes-ō-sē-lī), *n*. Same as *mesocælia*.

mesocælia (mes-ō-sē-lī-ā), *n*, pl. *mesocælia* (-ē) [NL, < Gr *μῆσος*, middle, + *κοιλία*, a hollow, ventricle see *cælia*] The ventricle of the mesencephalon, the mesencephalic cavity of the brain, connecting the diacælia with the epicælia, the aqueduct of Sylvius. B G Wilder

mesocælian (mes-ō-sē-lī-an), *a* [*<* *mesocælia* + *-an*] Of or pertaining to the mesocælia of the brain.

Mesocælia tubular, *mesocælian* roof quadrilobate.
Amer Nat, XXI 914

mesocolic (mes-ō-kol'ik), *a*. [*<* *mesocolon* + *-ic*] Of or pertaining to the mesocolon as, a *mesocolic* peritoneal fold, *mesocolic* attachment.

mesocolon (me-sok'ō-lon), *n* [NL, < Gr *μεσocolon*, less prop *μεσώκολον*, the part of the mesentery next the colon, < *μῆσος*, middle, + *κόλον*, the colon see *colu* 2] The mesentery of the colon, the peritoneal fold which holds the colon in place.

mesocoracoid (mes-ō-kor'a-koid), *a* and *n* [*<* Gr *μῆσος*, middle, + *Ε coracoid*] 1. *a* Situated between the hypercoracoid and the hypocoracoid.

2. *n* An element in the shoulder-girdle of teleost fishes, disintegrated from the coracoid or paragonal cartilage, and intermediate between or bridging over the hypercoracoid and hypocoracoid. It is developed in the malacopterygian and plecostomid fishes, but is lost in the acanthopterygians.

mesocuneiform (mes-ō-ku'nē-i-fōrm), *n* and *a* [*<* Gr *μῆσος*, middle, + *Ε cuneiform*] 1. *n* In *anat* and *zool*, the middle one of the three cuneiform bones of the tarsus, lying between the ectocuneiform and the entocuneiform. It is in special relation with the head of the second metatarsal bone. Also called *mesosphenoid*.

2. *a* Middle, as a cuneiform bone, pertaining to the mesocuneiform.

mesode (mes'ōd), *n* [*<* Gr *μεσώδης*, a mesode (see *def*), < *μῆσος*, middle, + *αἰδεν*, *αἰδεν*, sing, > *αἰδ*, a song, ode see *ode*] In *ani pros*, a system of metrically different composition in-

tervening between a strophe and its antistrophe. See *epode*.

mesoderm (mes-ō-dērm), *n*. [*<* Gr *μῆσος*, middle, + *δέρμα*, skin] 1. The middle germinal layer of the three-layered embryo of any metazoic animal, lying between the endoderm and the ectoderm. The term is used synonymously with *mesoblast*, the correlation being endoderm, mesoderm, and ectoderm, hypoblast, mesoblast, and epiblast, or mucous, vascular, and serous layers. Most of the body of every metazoan animal is derived from the mesoderm. When the embryo becomes four layered, as it usually does, this state results from the splitting of the mesoderm into an inner visceral and an outer parietal layer, called respectively *splanchnopleural* and *somatopleural*, or *trochodermotory* and *volventotory*.

2. In *bot*, the middle layer of tissue in the shell of the spore-case of an urn-moss.

mesodermal (mes-ō-dēr-mal), *a* [*<* *mesoderm* + *-al*] Of or pertaining to the mesoderm in plants or animals, having a middle germinal layer.

Mesodermalia (mes-ō-dēr-mā'h-ā), *n*, pl [NL, < Gr *μῆσος*, middle, + *δέρμα*, skin] *Spongiocæ* or *Porifera* regarded as a prime division of the grade *Calentera*, whose archenteron is a branching canal-system communicating with the outer water by a set of inhalant and exhalant pores, the sponges opposed to *Epithelaria*, or all other *Calentera* collectively. R von Lendenfeld

mesodermalian (mes-ō-dēr-mā'h-an), *a* and *n* [*<* *Mesodermalia* + *-an*] 1. *a* Pertaining to the *Mesodermalia*, or having their characters.

2. *n* A member of the *Mesodermalia*.

mesodermic (mes-ō-dēr'mik), *a*. [*<* *mesoderm* + *-ic*] Pertaining to or of the nature of a mesoderm or middle germinating layer, mesodermic.

And so form the foundation of the *mesodermic* investment by which the body cavity of the adult is lined.
A Sedgwick, Microsc. Science, XXVII 499

Mesodesma (mes-ō-des'mā), *n* [NL, < Gr *μῆσος*, middle, + *δέρμα*, a band see *desma*] A genus of wedge-shells of the family *Donacidae*, or made type of a family *Mesodermidae*, having a thick solid trigonal shell with two short stout lateral teeth, and the cartilage internal. Species abound in the Australian region.

Mesodesmidae (mes-ō-des'mi-dē), *n* pl [NL, < *Mesodesma* + *-idae*] A family of bivalve mollusks, named from the genus *Mesodesma*. J E Gray, 1840

mesodic (mes-ō-dik), *a* [*<* *mesodic* + *-ic*] In *ani pros*, constituting or pertaining to a colon, line, or system of a different length or metrical character interposed between two cola, two sets of uniform lines, or two systems of identical metrical form, especially, constituting, pertaining to, or containing a system of different form intervening between a strophe and its antistrophe. See *epode*, *palinodie*, *periodic*, *proode*.

mesodont (mes-ō-dont), *a* [*<* Gr *μῆσος*, middle, + *ὀδών* (*ōdōn*) = *E tooth*] 1. In *anthropol*, having medium-sized teeth as, the *mesodont* races. 2. In *zool*, pertaining to the *Mesodontia*, or having their characters.

Mesodonta (mes-ō-don'tā), *n*, pl [NL, < Gr *μῆσος*, middle, + *ὀδών* (*ōdōn*) = *E tooth*] A group of extinct mammals of North America, resembling *Insectivora*, characterized by Cope as a suborder of *Bunotheria*, having the incisors not growing from persistent pulps, the molars tubercular and never sectorial, the third trochanter apparently elevated, and the astragalus not grooved above. Ten Eocene genera are referred to this group.

mesoduodenal (mes-ō-dū-ō-dē'nal), *a* [*<* *mesoduodenum* + *-al*] Of or pertaining to the mesoduodenum.

mesoduodenum (mes-ō-dū-ō-dē'nūm), *n* [NL, < Gr *μῆσος*, middle, + NL *duodenum*, *q v*] The fold of peritoneum which incloses and supports the duodenum, the duodenal mesentery.

mesogaster (mes-ō-gas'tēr), *n*. [NL, < Gr *μῆσος*, middle, + *γαστήρ*, belly.] 1. An inter-

mediate part of the intestine, extending from the pylorus to the cæcum, and including the small intestine with its annexes, as the liver and pancreas, also, in the fetus, the umbilical vesicle. It is commonly called the *mid-gut*.—2 [cap] A genus of fossil fishes. *Agassiz*.

mesogastral (mes-ō-gas'tral), *a*. [*<* *mesogaster* + *-al*] Of or pertaining to the mesogaster.

mesogastric (mes-ō-gas'trik), *a* [*<* *mesogastrum* + *-ic*] 1. Of or pertaining to the mesogastrum; umbilical as a region of the abdomen; mesenteric with reference to the stomach or to the mesogaster.—2. In *Crustacea*, situated in the middle of the gastric lobe of the carapace specifically applied to a median subdivision of that lobe, the mesogastric lobe. See cut under *Brachyura*.

mesogastrum (mes-ō-gas'tri-um), *n*. [NL, < Gr *μῆσος*, middle, + *γαστήρ*, belly] 1. In *human anat*, the umbilical region of the abdomen, between the epigastrium above and the hypogastrium or epipubic region below. See cut under *abdomen*.—2. In *anat* and *zool*, the mesenteric of the stomach, the fold of peritoneum which holds the stomach in place. It is a portion of the common intestinal mesentery, in early fetal life indistinguishable therefrom, but afterward variously modified.

mesogenous (me-sōj'ō-nus), *a* [*<* Gr *μῆσος*, middle, + *-γενής*, born, produced see *-genous*] Increasing by growth at or from the middle, as the spores of certain fungi. [Rare]

mesoglossa (mes-ō-glō'sā), *n* [NL, < Gr *μῆσος*, middle, + *γλῶσσα*, *γλῶσσά*, glue see *gluc*] 1. The mesodermal intercellular substance, or ground-substance, of some animals, as sponges and other *Calentera*. R von Lendenfeld, Proc Zool Soc, London, 1886, p 566.—2 [cap] A genus of gelatinous seaweeds, typical of the *Mesoglossaceae*, with olive-brown branching filamentous fronds. The unilocular sporangia are oval in shape and borne at the base of peripheral filaments, the plurilocular sporangia are unknown. Agardh, 1817

Mesoglossaceae (mes-ō-glō'sā-sē-dē), *n* pl [NL (Kützting, 1843), < *Mesoglossa* + *-acea*] A family of olive-green seaweeds with a gelatinous or cartilaginous thallus of hemispherical or cylindrical outline, forming small gelatinous or slimy cushions or branching tufts on other larger seaweeds. The same or nearly the same as the *Chordarveae* or *Chordariaceae* of Harvey. See *Chordarveae*.

mesoglossal (mes-ō-glō'sal), *a* [*<* *mesoglossa* + *-al*] Consisting of, pertaining to, or resembling mesoglossa.

mesogluteus (mes-ō-glū-tē'us), *n*, pl. *mesoglutæ* (-ī) [NL, < Gr *μῆσος*, middle, + NL *glutæus*, *q v*] The middle gluteal muscle, the glutæus medius.

mesogluteal (mes-ō-glū-tē'al), *a* [*<* *mesogluteus* + *-al*] Of or pertaining to the mesogluteus.

mesognathic (mes-ō-g-nath'ik), *a*. Same as *mesognathous*.

mesognathous (me-sōg'nā-thus), *a* [*<* Gr *μῆσος*, middle, + *γνάθος*, jaw] 1. Having a moderate or intermediate gnathic index of from 98 to 103, as a skull.—2. Having a skull thus characterized, as a person.

mesognathy (me-sōg'nā-thi), *n* [As *mesognathous* + *-y*] That character of a skull or person in which the jaws are moderately prominent anteriorly, indicated by a gnathic index of from 98 to 103.

Mesohippus (mes-ō-hip'us), *n* [NL, < Gr *μῆσος*, middle, + *ἵππος*, a horse] A genus of very small three-toed horses, of the family *Equidae*, founded by Marsh in 1875 upon remains from the early Miocene of North America. The animal was only about as large as a sheep, with three functional digits on each foot, and an additional splint-bone on each of the fore feet.

mesolabe (mes-ō-lāb), *n* [*<* L *mesolabium*, < Gr *μεσολάβιον*, prop *μεσολαβιον*, *μεσολαβος*, an instrument invented by Eratosthenes for finding mean proportional lines, < *μῆσος*, middle, mean (neut. pl *μεσα*, mean terms), + *λαμβάνειν*, *√ λαβ*, take Cf *astrolabe*.] A mechanical contrivance for geometrically extracting the roots of quantities. It consists of a number of equal rectangles, each having a diagonal marked, and all capable of sliding along a line common to the bases of all so that they partially overlap one another. The marked diagonals are all parallel. To use the instrument, all the intersections, each formed of the diagonal of one rectangle and the overlapping edge of the next one, are brought by the sliding along of the rectangles, into one straight line with one extremity of the diagonal of the uppermost rectangle and a point on the exposed edge of the lowermost rectangle. From the extremity of the diagonal on the same edge measures the quantity whose root is to be extracted. Then

the corresponding distance on the uppermost rectangle is the root multiplied by that of the common altitude of the rectangles, which last is supposed to be known. The exponent of the root is equal to the number of rectangles employed. The mesolabe was invented by Eratosthenes, about 200 to 250 years before Christ.

mesole (mes'ōl), *n* [*Gr. μέσος*, middle (?)] See *thomsonite*.

mesolite (mes'ō-līt), *n* [*Gr. μέσος*, middle, + λίθος, stone.] A zeolitic mineral resembling scapolite, but containing both calcium and sodium.

mesolobar (mes'ō-lō-bār), *a*. [*Gr. μέσος*, middle, + λωβός, lobe see *lobe*] Of or pertaining to the mesolobe, callosal as, mesolobar arteries [Rare]

mesolobe (mes'ō-lōb), *n*. [*Gr. μέσος*, middle, + λωβός, lobe see *lobe*] The callosum or corpus callosum of the brain, the great commissure of the cerebral hemispheres [Rare or obsolete]

mesologarithm (mes-ō-log'ā-rī-thm), *n* [*Gr. μέσος*, middle, + *E. logarithm*] A logarithm of the cosine or cotangent. *Archer*

mesological (mes-ō-lōj'i-kul), *a* [*Gr. μέσος*, middle, + λογία, *logia*, speak see *-ology*] Of or pertaining to mesology, relating to the medium in which an organism exists.

Grapes contain the mineral salts in variable quantity, the proportion depending on the variety of grape and on mesological conditions.

Buck's Handbook of Med. Sciences, III 382

mesology (me-sol'ō-jī), *n* [*Gr. μέσος*, middle, + λογία, *logia*, speak see *-ology*] The sum of human knowledge concerning the relations of an organism to its environment.

mesomeristem (mes-ō-mer'is-tem), *n* [*Gr. μέσος*, middle, + *E. meristem*] The innermost of the two layers into which the exomeristem is divided. The exomeristem is the thickening ring which surrounds the axial strand (primary pith of Sano) or pith cylinder of the nascent shoots or branches of plants. It is divided into two layers, the *mesomeristem*, which gives rise to the vascular bundles, and the *perimeristem*, which gives rise to the external cortex and the dermatogen.

mesometric (mes-ō-met'rik), *a* [*Gr. μέσος*, middle, + *E. metric*] Of or pertaining to a mesometry or mesometrium as, mesometric folds of peritoneum.

mesometritis (mes'ō-mē-trī'tis), *n* [*NL*, *Gr. μέσος*, middle, + *μήτρα*, the womb, + *-itis*] In *pathol.*, inflammation of the middle or muscular coat of the uterus. Compare *metritis*.

mesometrium (mes-ō-mē'tri-um), *n*, pl. *mesometria* (-a). Same as *mesometry*.

mesometry (mes'ō-mē'trī), *n*, pl. *mesometries* (-trīe). [*NL*, *mesometrium*, *Gr. μέσος*, middle, intermediate, + *μήτρα*, the womb see *matrix*] The mesentery of the womb or its annexes, a peritoneal fold, holding in place the uterus or an oviduct. The broad ligament of the human uterus is a mesometry. Corresponding duplications of peritoneum acquire special characters in different cases.

It (the oviduct of a bird) is supported by peritoneal folds forming a mesometry like the mesentery of the intestines. *Coues Key to N. A. Birds*, p. 221

Mesomphalia (mes-om-fā'li-ā), *n* [*NL* (Hope, 1838), *Gr. μέσος*, middle, + *μφαλός*, the navel] A genus of beetles of the family *Chrysomelidae*. They are almost exclusively South American, there being over 200 such species, as against one in North America. *M. conspersa* is a South American species with peaked elytra, of a blackish green color punctured with velvety black spots, and burnished with six larger golden haired spots.

Mesomyodi (mes'ō-mī-ō'dī), *n*, pl. [*NL*, *Gr. μέσος*, middle, + *μυς*, muscle, + *ωδή*, song] A suborder or other prime division of *Passeres*, in which the syrinx is mesomyodian, non-melodious or songless passerine birds distinguished from *Acromyodi*.

mesomyodian (mes'ō-mī-ō'dī-an), *a*. [*As Mesomyodi* + *-an*] Having the intrinsic syringeal muscles attached to the middle part of the upper bronchial rings.

Syrinx with less than four distinct pairs of intrinsic muscles inserted at the middle of the upper bronchial half ring, representing the mesomyodian type of voice organ. *Coues Key to N. A. Birds*, p. 427

mesomyodous (mes'ō-mī-ō'dūs), *a* [*As Mesomyodi* + *-ous*] Same as *mesomyodian*.

meson (mes'on), *n* [*Gr. μέσος*, the middle, neut. of μέσος = *L. medius*, middle see *medium*, *midl.*] 1 The median plane which divides a body into two equal and symmetrical parts; the vertical longitudinal middle plane, dividing the body into right and left halves. Every median line lies in the meson. The dorsal border of the meson is called the *dorsimeson*, the ventral, *ventrimeson*. Also *mesium*. See *median*, *a*.

The meson, mesal, or median plane is an imaginary longitudinal plane extending from the dorsal surface of the body to the ventral surface, and dividing the body into right and left symmetrical halves.

Buck's Handbook of Med. Sciences, VIII 536

2. See *tetrachord*.

mesondeut, mesondieut, n. See *mesondeut*.

mesonephric (mes-ō-nēf'rik), *a* [*Gr. μέσος*, middle, + *νεφρός*, kidney see *nephritis*] Of or pertaining to the mesonephron.

The mesonephric tubules extend gradually from behind forwards till they come in contact with the pronephros. *Micros Science*, XXIX 185

mesonephron (mes-ō-nēf'ron), *n*, pl. *mesonephra* (-rā) [*NL*, *Gr. μέσος*, middle, + *νεφρός*, kidney see *nephritis*] The Wolffian body proper, the central or intermediate part of the segmental organs or primitive renal organs of the embryo, between the pronephron and the metanephron, whose duct is the Wolffian duct distinguished from pronephron and metanephron.

mesonephros (mes-ō-nēf'ros), *n*, pl. *mesonephroi* (-roi) [*NL* see *mesonephron*] Same as *mesonephron*. *Gray, Anat.* (ed 1887), p. 133

mesonotal (mes-ō-nō'tal), *a* [*Gr. μέσος*, middle, + *νότος*, the back] Situated on the mesonotum; of or pertaining to the mesonotum.

mesonotum (mes-ō-nō'tum), *n* [*NL*, *Gr. μέσος*, middle, + *νότος*, the back] The middle one of the three divisions of the notum of an insect, succeeding the pronotum and preceding the metanotum, the dorsal division of the mesothorax, the upper part of the middle thorax is segment. It consists typically of four sclerites, called *prænotum*, *scutum*, *scutellum*, and *postscutellum* which may or may not be distinguishable by means of sutures between them. In *Hymenoptera*, *Lepidoptera*, and *Diptera* it is very large, forming the principal part of the upper surface of the thorax. In these insects its divisions are usually named without the prefix *meso*. In insects having wing covers the mesonotum is generally concealed by them, except a piece called the *scutellum*, which may be very small, as in most *Coleoptera*, or large, as in many *Hemiptera*.

Mesonychidae (mes-ō-nīk'i-dē), *n*, pl. [*NL*, *Gr. μέσος*, middle, + *ονyx*, nail see *onyx*] A family of mammals having as type the genus *Mesonyx*.

Mesonyx (mes'ō-nīks), *n* [*NL*, *Gr. μέσος*, middle, + *ονyx* (ονυχ-), nail see *onyx*] A genus of fossil carnivorous mammals, based by Cope in 1873 upon remains from the Eocene beds of Wyoming. It represents a generalized type supposed by Cope to have some relationship with existing seals. The animal had flat blunt claws and a long slender tail.

mesoparapteral (mes'ō-pā-rap'te-rāl), *a* [*Gr. μέσος*, middle, + *πτερων*, wing see *-pteron*] Of or pertaining to the mesoparapteron.

mesoparapteron (mes'ō-pā-rap'te-ron), *n*, pl. *mesoparaptera* (-rā) [*NL*, *Gr. μέσος*, middle, + *πτερων*, wing see *-pteron*] The parapteron of the mesothoracic segment, the third sclerite of the mesopleuron.

mesophlebitis (mes'ō-flē-bī'tis), *n* [*NL*, *Gr. μέσος*, middle, + *φλέβις* (φλεβ-), a vein, + *-itis*] In *pathol.*, inflammation of the middle coat of a vein.

mesophloeum (mes-ō-flō'um), *n* [*NL*, *Gr. μέσος*, middle, + *φλοιός*, bark] In *bot.*, the middle or green layer of bark.

mesophragm (mes'ō-frāgm), *n* [*NL* see *mesophragma*] Same as *mesophragma*.

mesophragma (mes-ō-frāgm'ā), *n*, pl. *mesophragmata* (-mā-tā) [*NL* *mesophragma*, *Gr. μέσος*, middle, + *φράγμα*, partition see *diaphragm*] 1 In *entom.*, a transverse internal partition, descending from the anterior border of the metathorax above, between the mesothorax and the metathorax, and serving for the attachment of muscles. It probably corresponds to the metapresectum, it is often absent. 2 In *Crustacea*, that process of an endosternite (or intersternal apodeme) which is directed inward to unite with its fellow and form an arch over the sternal canal. See *sternal canal*, under *sternal*.

mesophragmal (mes-ō-frāgm'al), *a* [*Gr. μέσος*, middle, + *φράγμα*, partition see *diaphragm*] Pertaining to the mesophragm.

mesophyl, mesophyll (mes'ō-fīl), *n* [*NL*, *Gr. μέσος*, middle, + *φύλλον*, a leaf] The parenchymatous tissue which lies between the epidermal layers of a flat leaf-lamina, the soft inner tissue of leaves.

mesophyllum (mes-ō-fīl'um), *n* [*NL*, *Gr. μέσος*, middle, + *φύλλον*, leaf] Same as *mesophyl*.

mesophytum (me-sōf'i-tum), *n*, pl. *mesophyta* (-tā) [*NL*, *Gr. μέσος*, middle, + *φυτόν*, a plant] In *bot.*, the line of demarcation between the internode and the petiole. *Lindley*

mesopic (me-sōp'ik), *a* [*Gr. μέσος*, middle, + *ὥψ* (ὥπ-) face] Having a nasomalar index of from 107.5 to 110, as the negroid races, having small and moderately retreating malar bones as, a mesopic face.

mesoplast (mes'ō-plast), *n* [*Gr. μέσος*, middle, + *πλαστός*, verbal adj. of *πλάσσειν*, form, mold.] Nuclear protoplasm, endoplast, a cell-nucleus.

mesoplastic (mes-ō-plas'tik), *a* [*Gr. μέσος*, middle, + *πλαστικός*, verbal adj. of *πλάσσειν*, form, mold.] Of or pertaining to mesoplast.

mesoplastral (mes-ō-plas'tral), *a* [*Gr. μέσος*, middle, + *πλάστρα*, plastron] Of or pertaining to the mesoplastron.

In the Pleurodora the first two families are distinguished from one another by the presence or absence of a mesoplastral bone. *Nature*, XL 7

mesoplastron (mes-ō-plas'tron), *n* [*Gr. μέσος*, middle, + *πλάστρα*] A median and anterior bone or plate of the plastron developed in certain of the pleurodorous tortoises.

mesopleural (mes-ō-plō'al), *a* [*Gr. μέσος*, middle, + *πλευρά*, pleura] Intermediate and lateral, as a part of the mesothorax, of or pertaining to the mesopleuron.

mesopleuron (mes-ō-plō'ion), *n*, pl. *mesopleura* (-rā) [*NL*, *Gr. μέσος*, middle, + *πλευρά*, pleura] The lateral or pleural part of the mesothorax of an insect, a mesothoracic pleuron, following the propleuron and preceding the metapleuron. Each mesopleuron, right and left, is divided into three sclerites: an episternum, an epi-pleuron, and a parapleuron.

Mesopodion (me-sōp'ō-dion), *n*, [*NL*, *Gr. μέσος*, middle, + *πούς*, foot, + *ἰόν* (ἰοντ-) = *E. tooth*] A genus of cotaceans same as *Zephirus*.

mesopododont (me-sōp'ō-dont), *a* [*Gr. μέσος*, middle, + *πούς*, foot, + *δόντις* (δοντ-) = *E. tooth*] Armed with a tooth in the middle of each side of the lower jaw said specifically of whales of the genus *Mesopodion*.

mesopodia, *n* Plural of *mesopodium*.

mesopodial (mes-ō-pō'dī-al), *a* and *n* [*Gr. μέσος*, middle, + *πούς*, foot, + *-αλ*] 1 *a* Of or pertaining to the mesopodium of a mollusk. 2 Of or pertaining to the mesopodialia.

II. *n* A mesopodial bone, one of the mesopodialia.

mesopodialia (mes-ō-pō'dī-ā'li-ā), *n*, pl. [*NL* (Marsh, 1880) see *mesopodium*] The bones of the carpus and tarsus, taken together, as mutually corresponding, and as forming morphological segments of the limbs intervening between the epipodialia and the metapodialia. See *epipodialia*.

mesopodium (mes-ō-pō'di-um), *n*, pl. *mesopodia* (-a) [*NL*, *Gr. μέσος*, middle, + *πούς* (πόδ-) = *E. foot*] The middle one of the three parts into which the foot of some mollusks, as gastropods and pteropods, may be divided, between the propodium and the metapodium. See *epipodium*.

mesopostscutellar (mes'ō-post-sku'te-lār), *a* [*Gr. μέσος*, middle, + *στέφανος*, stephanos, crown, + *-αλ*] Of or pertaining to the mesopostscutellum.

mesopostscutellum (mes-ō-post-sku'tel'um), *n*, pl. *mesopostscutella* (-ā) [*NL*, *Gr. μέσος*, middle, + *στέφανος*, stephanos, crown, + *-αλ*] The postscutellum of the mesonotum, the postscutellar sclerite of the mesothorax.

Mesopotamian (mes'ō-pō-tā'mi-an), *a* [*Gr. Μεσopotamia*, *Gr. Μεσopotamia*, Mesopotamia (see *def.*), *lit.* 'the land between the rivers,' *Gr. μέσος*, middle, + *ποταμός*, potamos, river] Pertaining to Mesopotamia, the region between the rivers Tigris and Euphrates in Asia, north of Babylonia. The name is sometimes extended to include Babylonia also. — **Mesopotamian art**, a convenient general name including the kindred arts of ancient Chaldaea, Babylonia, and Assyria, though these arts were not definitely limited to Mesopotamia proper. They constitute together one of the chief divisions of art development, and exerted an important influence upon Greek art and hence upon succeeding arts for all time. See *Assyrian, Babylonian, and Chaldean*.

mesopræscutal (mes'ō-prē-sku'tal), *a* [*Gr. μέσος*, middle, + *πρόσκατος*, pros-katos, before, + *-αλ*] Of or pertaining to the mesopræscutum.

mesopræscutum (mes'ō-prē-sku'tum), *n*, pl. *mesopræscuta* (-tā) [*NL*, *Gr. μέσος*, middle, + *πρόσκατος*, pros-katos, before, + *-αλ*] The præscutum of the mesothoracic segment of an insect.

mesoprosopic (mes-ō-prō-sōp'ik), *a* [*Gr. μέσος*, middle, + *πρόσκατος*, pros-katos, before, + *-αλ*] Intermediate between a chameleoprosopic and lepto-opsopic — that is, with a face of moderate width, with a facial index of about 90.

mesopsyche (mes-ōp-sī'kē), *n* [*Gr. μέσος*, middle, + *ψυχή*, psuchē, spirit] Haeckel's name for the midbrain or mesencephalon.

mesopterygial (mes-ōp-terij'i-al), *a* [*Gr. μέσος*, middle, + *πτερυγιον*, pterygion, wing] Of or pertaining to the mesopterygium.

mesopterygium (mes-ōp-terij'i-um), *n*, pl. *mesopterygia* (-ā) [*NL*, *Gr. μέσος*, middle, +

NL *pterygium*.] The middle one of several basal cartilages which the pterygium of a fish, as an elasmobranch, may present, between the propterygium and the metapterygium. See *pterygium*.

mesopterygoid (mes-op-ter'i-goid), *n* [NL, < Gr *μῆκος*, middle, + NL *pterygoid*, *q v*] That part of the pterygoid which in birds articulates with the palatal bone or with the basipterygoid process of the sphenoid, or with both.

mesopycni (mes-ō-pik'ni), *n pl* [ML, < Gr *μέσος*, middle, + *πυκνός*, a small interval in music, neut of *πυκνός*, close.] In *medieval music*, modes based upon a tetrachord having its half-step in the middle.

mesorchial (mes-ōr'ki-al), *a* [*< mesorchium* + -al] Of or pertaining to the mesorchium.

mesorchium (mes-ōr'ki-um), *n*, *pl mesorchia* (-i) [NL, < Gr *μέσος*, middle, + *ὄρχις*, a testicle] In *anat.*, the fold of peritoneum supporting the testis while in the abdomen, or as it descends into the scrotal sac.

mesorectal (mes-ō-rek'tal), *a* [*< mesorectum* + -al] Of or pertaining to the mesorectum.

mesorectum (mes-ō-rek'tum), *n*, *pl mesorecta* (-ta) [NL, < Gr *μέσος*, middle, + NL *rectum*, *q v*.] The mesentery of the rectum, the fold of peritoneum which is reflected over part of the rectum, holding this gut in place.

mesoretina (mes-ō-ret'i-nā), *n* [NL, < Gr *μέσος*, middle, + NL *retina*, *q v*.] The middle stratum, or mosaic layer, of the retina, composed of the rod and cone and nuclear layers. *J. Leidy, Anat.*, 1889.

mesorhinal (mes-ō-rī'nal), *a* [*< mesorhine* + -al.] Internasal, internarial, situated between the nostrils said specifically of the mesorhinium.

mesorhine (mes-ō-rin), *a* [Properly *mesorrhine* (of Gr *μεσέρη*, having a middling nose), < Gr *μέσος*, middle, + *ῥίς* (rh-), nose.] Having an index ranging from 48 to 53 applied to the nose, or to a person having such a nose.

Nose small, *mesorhine* or *leptorhine* *W H Flower*

mesorhinian (mes-ō-rin'i-an), *a*. [*< mesorhine* + -an.] Same as *mesorhine*. *Nature*, XXXV 357.

mesorhinium (mes-ō-rin'i-um), *n*, *pl mesorhina* (-i) [NL, < Gr *μέσος*, middle, + *ῥίς* (rh-), the nose] In *ornith.*, the part of a bird's beak which is situated between the external nostrils, the basal or internarial part of the culmen. In some birds it runs up on the forehead, magnified or otherwise diversified, giving rise to the frontal shield or casque. See cuts at *antia* and *shield*.

mesoscapula (mes-ō-skap'ū-lā), *n*, *pl mesoscapulae* (-lā) [NL, < Gr *μέσος*, middle, + NL *scapula*, *q v*.] The spine of the scapula, considered as a median element of that bone. *W K Parker -Delta mesoscapula*. See *delta*.

mesoscapular (mes-ō-skap'ū-lār), *a* [*< mesoscapula* + -al.] Of or relating to the mesoscapula.

At the scapular extremity of the clavicle there is often a piece of cartilage, considered to be segmented off from the end of the mesoscapula, and hence called *mesoscapular segment*. *W H Flower*

mesoscuta, *n* Plural of *mesoscutum*.

mesoscutal (mes-ō-skū'tal), *a* [*< mesoscutum* + -al.] Of or pertaining to the mesoscutum.

mesoscutellar (mes-ō-skū'te-lār), *a* Of or pertaining to the mesoscutellum.

mesoscutellum (mes-ō-skū'tel'um), *n*; *pl mesoscutella* (-lā) [NL, < Gr *μέσος*, middle, + NL *scutellum*, *q v*.] In *entom.*, the scutellum of the mesonotum, the scutellar sclerite of the mesothorax.

mesoscutum (mes-ō-skū'tum), *n*, *pl mesoscuta* (-tā) [NL, < Gr *μέσος*, middle, + NL *scutum*, *q v*.] In *entom.*, the scutum of the mesonotum, the scutal sclerite of the mesothorax.

mesoseme (mes-ō-sēm), *a* [*< Gr μέσος*, middle, + *σημα*, a sign, mark, token.] In *craniom.*, having an orbital index between 84 and 89.

Mesosemia (mes-ō-sē'mi-ā), *n* [NL, < Gr *μέσος*, middle, + *σημα*, a sign, mark, token.] A genus of South American butterflies of the family *Erycinidae*. It contains many brown or blue species, striped with black, and usually having a large round black spot in the middle of the fore wing.

mesosiderite (mes-ō-sid'e-rit), *n* [*< Gr μέσος*, middle, + *σίδηρος*, of iron. see *siderite*.] A name given by G. Rose (1864) to one of three subdivisions made by him in the classification of meteoric irons, those divisions being founded on the comparative amount of iron and stony matter present. As defined by Bressina, in one of the most recent systematic classifications of the meteorites,

mesosiderite is a network of iron inclosing olivine and bronzite with more or less plagioclase, these minerals having so coarsely crystalline a texture that the characteristic structure is obscured. It forms a passage from the iron to the chondrites. The meteorite which fell at Estherville, Iowa, in 1879 is of this class. See *meteorite*.

mesosigmoid (mes-ō-sig'moid), *n* [*< Gr μέσος*, middle, + *E sigmoid*.] The mesentery of the sigmoid flexure of the intestine, between the mesocolon and the mesorectum.

mesosoma (mes-ō-sō'mā), *n*; *pl mesosomata* (-mā-tā) [NL, < Gr *μέσος*, middle, + *σῶμα*, the body.] In lamellibranchiate mollusks, a middle region of the body, which gives rise to the foot and is situated between the prosoma and the metasoma.

mesosomatic (mes-ō-sō-mat'ik), *a* [*< mesosoma* (-t) + -ic.] Of or pertaining to the mesosoma of a mollusk.

mesosperm (mes-ō-spērm), *n*. [*< Gr μέσος*, middle, + *σπέρμα*, seed.] In *bot.*, a membrane of a seed, the secundine, or second membrane from the surface.

mesospore (mes-ō-spōi), *n* [NL, < Gr *μέσος*, middle, + *σπόρος*, seed.] The middle coat or layer of a spore when it is possible to distinguish three layers, as in the spores of *Onoclea Struthiopteris*.

mesosporic (mes-ō-spō'rik), *a* [*< mesosporo* + -ic.] Of or pertaining to the mesospore.

mesostaphyline (mes-ō-staf'i-lin), *a* [*< Gr μέσος*, middle, + *σταφυλή*, the uvula.] In *craniom.*, intermediate between leptostaphyline and brachystaphyline—that is, with a palate of median width, having a palatal index of from 80 to 85.

mesostate (mes-ō-stāt), *n* [*< Gr μέσος*, middle, + *E state*.] In *bot.*, an intermediate substance or product in a series of metabolic changes.

We are thus led to the conception that the specific material of a secretion, such as the trypsin of pancreatic juice, comes from the protoplasm of the cell, through a number of intermediate substances, or *mesostates* as they are called. *M. Foster, Encyc. Brit.*, XII 19.

mesosterna, *n* Plural of *mesosternum*.

mesosternal (mes-ō-stēr'nal), *a* [*< mesosternum* + -al.] Of or pertaining to the mesosternum as, a *mesosternal sternite*.

mesosternerber (mes-ō-stēr'ne-bēr), *n* [*< NL mesosternebra*, < Gr *μέσος*, middle, + NL *sternebra*, sterniteber see *sternerber*.] Any one of the intermediate sternitebers or pieces of the breast-bone which intervene between the manubrium of the sternum and the xiphoid or ensiform appendage. There are usually several such bones in mammals and various reptiles, as the four composing the gladiolus in man.

mesosternebra (mes-ō-stēr'ne-brā), *n*, *pl mesosternebrae* (-brā) [NL] Same as *mesosternerber*.

mesosternal (mes-ō-stēr'ne-bral), *a* [*< mesosternerber* + -al.] Pertaining to a mesosternerber.

mesosternum (mes-ō-stēr'num), *n*, *pl mesosterna* (-nā) [NL, < Gr *μέσος*, middle, + NL *sternum*, *q v*.] 1 In *anat.*, the piece or pieces of a breast-bone which has several segments lying between the presternum and the xiphisternum said chiefly of the segmented sternum of mammals. In man it is the gladiolus or body of the sternum proper, as distinguished from the manubrium and the xiphoid cartilage. 2 In *entom.*, the ventral or sternal sclerite of the mesothorax; the under side of the mesothorax, opposite the mesonotum.

mesostethium (mes-ō-stē'thi-um), *n*, *pl mesostethia* (-iā) [NL, < Gr *μέσος*, middle, + *στήθιον*, dim. of *στήθος*, the breast.] In *entom.*, the metasternum, or large piece between the bases of the middle and the posterior legs. It is conspicuous in beetles. *Kirby*.

mesostylous (mes-ō-sti'lus), *a* [*< Gr μέσος*, middle, + *στυλος*, a pillar see *style*.] Same as *mid-styled*. See *heterostylism*.

Mesosuchia (mes-ō-sū'ki-ā), *n pl* [NL, < Gr *μέσος*, middle, + *σούχος*, a crocodile (a local name in Egypt).] A division of crocodiles having amphicealous vertebrae contrasted with *Eusuchia* and *Parasuchia*.

mesosuchian (mes-ō-sū'ki-an), *a* [*< Mesosuchia* + -an.] Of or pertaining to the *Mesosuchia*.

Crocodylians have developed into the *Mesosuchia* type. *Günther, Encyc. Brit.*, XX 466.

mesosuchious (mes-ō-sū'ki-us), *a* [*< Mesosuchia* + -ous.] Same as *mesosuchian*.

mesotarsus (mes-ō-tār'sus), *n*; *pl mesotarsi* (-sī) [NL, < Gr *μέσος*, middle, + NL *tarsus*, *q v*.] In *entom.*, the whole tarsus of the second or middle leg of a six-footed insect, coming between the metatarsus of the hind leg and the protarsus of the fore leg.

mesothelial (mes-ō-thē'h-āl), *a* [*< mesothelium* + -al.] Of or pertaining to mesothelium.

mesothelium (mes-ō-thē'h-ium), *n*. [NL, < Gr *μέσος*, middle, + NL (*epi*)*thelium*, *q v*.] The epithelium lining the entire primitive coelom or body-cavity of the embryo, the coelarium.

Mesotheriidae (mes-ō-thē-rī'dē), *n pl* [NL, < *Mesotherium* + -idae.] A family of extinct quadrupeds from the Pliocene of South America, representing a very generalized type, allied on the one hand to the rodents and by some made a suborder, *Hebidentata*, of *Rodentia*, by others referred to the *Subungulata* or polydaetyl ungulates. There are clavicles, as in no other known ungulates, and four lower incisors, as in no known rodents the mandibular condyle is transverse and the maxillaries articulate with the nasals. There are in each upper half jaw 1 incisor, no canines, 2 premolars, and 3 molars, and in each lower half jaw 2 incisors, no canines, 1 premolar, and 3 molars—in all, 24 teeth.

Mesotherium (mes-ō-thē'rī-um), *n* [NL, < Gr *μέσος*, middle, + *θηρίον*, a wild beast.] A genus of fossil rodent-like ungulate quadrupeds, typical of the family *Mesotheriidae*, upon which is based the prime division *Hebidentata*. *M. cristatum* is the type species. *Typotherium* is a synonym.

mesotherm (mes-ō-thērm), *n* [= *F mesotherme*, < Gr *μέσος*, middle, + *θερμός*, hot, *θερμῆς*, heat.] In Alphonse de Candolle's classification of plants with regard to their geographical distribution, a plant of his third "physiological group." The plants of this group require a moderate degree of heat, from 15 to 20 °C. They are very numerous, including most of the plants of the warmer parts of the temperate zones of both hemispheres exclusive of the mountainous districts.

mesothesis (me-soth'e-sis), *n* [*< Gr μέσος*, middle, + *thesis*, a putting, proposition see *thesis*.] Middle place, mean [Rare.]

Imitation is the *mesothesis* of likeness and difference. *Coleridge*

mesothoracic (mes-ō-thō-ras'ik), *a* [*< mesothorax* (-ac-) + -ic.] Of or pertaining to the mesothorax of an insect—*Mesothoracic case*. Same as *mesothoracotheca*.

mesothoracotheca (mes-ō-thō'ra-kō-thē'kā), *n*, *pl mesothoracothecae* (-sē) [NL, < *mesothorax* (-ac-) + Gr *θήκη*, a case.] In *entom.*, the mesothoracic case, or that part of the integument of a pupa covering the mesothorax. In the *Lepidoptera* and *Diptera* the other thoracic cases are indistinguishable from this, and it is then called the *thoracotheca*.

mesothorax (mes-ō-thō'raks), *n* [NL, < Gr *μέσος*, middle, + *θώραξ*, chest see *thorax*.] In *entom.*, the second or middle one of the three divisions of the thorax, situated between the prothorax and the metathorax, and bearing the second pair of legs and the first pair of wings.

When very large, as in dipterous insects, it is simply called the *thorax*.

mesotrocha (me-sot'ro-kā), *n pl*. [NL, < Gr *μέσος*, middle, + *τροχή*, anything round or circular see *trochee*.] Ciliated embryos of polychaetous annelids in which one or many bands of cilia encircle the middle of the body. See *atrocha*, *telotrocha*.

mesotrochal (me-sot'rō-kal), *a*. [*< mesotrocha* + -al.] Pertaining to or resembling mesotrocha, mesotrochous.

The actively locomotive embryo of *Sipunculus* resembles a Rotifer or a mesotrochal annelidan larva. *Huxley, Anat. Invert.*, p. 217.

mesotrochous (me-sot'rō-kus), *a* [As *mesotrocha* + -ous.] Same as *mesotrochal*.

mesotympanic (mes-ō-tim-pan'ik), *a* and *n*. [*< Gr μέσος*, middle, + *τύμπανον*, a drum (see *tympanum*), + -ic.] I. *a*. Situated in the

Sternum of Fig. showing ms, mesosternum or gladiolus, ps, presternum or manubrium, xs, xiphisternum or xiphoid appendage.

Mesothorax shaded, between prothorax (a) and metathorax (b); c, head; d, two abdominal segments.

midst of the bones forming the tympanic pedicle of a fish; symplectic: correlated in Owen's nomenclature with *epitympanic*, *hypotympanic*, and *pretympenic*.

II. *n* The mesotympanic bone, now called the *symplectic*. See cut under *palatoquadrate*.

The steryoid abutting upon the hypotympanic, between this and the epitympanic are the *mesotympanic* and the *pretympenic*. Owen, Anat. Vert. (1886), I 105.

mesotype (mes-ō-tīp), *n* [NL, < Gr μέσος, middle, + τύπος, impression, type. see *type*] In *mineral*, a name early given to several minerals of the zeolite group which are now recognized as distinct species. It included natrolite or soda-mesotype, scolecite or lime-mesotype, mesolite or lime-soda mesotype, and also thomsonite.

mesovarian (mes-ō-vā-rī-an), *a* [*<* mesovarium + -an] Of or pertaining to the mesovarium.

mesovarium (mes-ō-vā-rī-um), *n*, pl *mesovaria* (-a) [NL, < Gr μέσος, middle, + NL ovarium, ovary see *ovary* Cf *mesovarium*] The mesentery of the ovary, a fold of peritoneum holding the ovary in place, and representing in the female the mesorchium of the male.

mesoventral (mes-ō-ven-tral), *a* [*<* Gr μέσος, middle, + E ventral] Median and ventral in position, situated on the ventrimeson.

mesoventrally (mes-ō-ven-tral-i), *adv* In a mesoventral position or direction, ventrimesad.

mesoxalate (me-sok-sal-āt), *n* [*<* mesoxalic + -ate] A combination of mesoxalic acid with a base.

mesoxalic (mes-ok-sal-ik), *a* [*<* Gr μέσος, middle, + E oxalic] Of, pertaining to, or derived from oxalic acid as, *mesoxalic acid*, C(OH)₂(CO₂H)₂, a crystalline solid which readily breaks up into carbonic acid and oxalic acid.

Mesozoa (mes-ō-zō-ā), *n* pl [NL, pl of *mesozoön*] A provisional primary division of animals, considered intermediate between the *Protozoa* and the *Metazoa*, and based upon the characters of the *Dicemida* alone. These animals have no mesoderm, yet develop metazoic embryos by epiboly. Huxley, Anat. Invert., p 578.

Mesozoic (mes-ō-zō-ik), *a* [*<* Gr μέσος, middle, + ζῷον, life] In *geol.*, lying, as a part of the geological series so designated, between the Paleozoic and the Tertiary rocks. It is a synonym of *Secondary* as that term is employed by geologists. The whole series of fossiliferous rocks is divided into Paleozoic, Mesozoic or Secondary, and Tertiary. The principal subdivisions of the Mesozoic are the Trias or Triassic, the Jura or Jurassic, and the Cretaceous. (See these terms.) The Mesozoic is distinguished for the great development of the *Reptilia* and its period has hence been called the "Age of Reptiles." In the Mesozoic occur the first traces of mammals, of birds, and of fishes with bony skeletons as well as the first palms and angiosperms.

mesozoön (mes-ō-zō-on), *n* [NL, < Gr μέσος, middle, + ζῷον, animal.] One of the *Mesozoa*.

Mespilus (mes-pī-lus), *n* [NL (Tournefort, 1700), < L *mespilus*, also *mespila*, *mespilum*, < Gr μέσπιλον, medlar-tree, a medlar, μεσπίλη, medlar-tree see *medlar*] A genus of rosaceous plants of the tribe *Pomeae*, characterized by the bony endocarp of the fruit and the expanded mouth of the leafy calyx. They are shrubs or small trees, which are more or less thorny when wild, and have undivided, nearly sessile leaves, and large white or pinkish flowers, solitary and sessile on short leafy branches. The fruit is nearly globular or pear shaped, and is crowned by a broad, hairy disk, from which the five bony cells slightly protrude. The genus includes one (or perhaps two) species, found in various parts of Europe and western Asia. *M. germanica* is the common medlar, cultivated in many varieties for its fruit. See *medlar*.

mespriset, *n* See *mesprize*.

mesquit¹, *n* [Also *mesquite*, *meskit*, *mesquite*, *meschit*, *mesquite*, < Sp *mesquite*, *mezquite*, < Ar *masjid*, a mosque see *mosque* and *masjid*] A mosque.

The *Mesquit* (for many of them are Mahometans) is of bricks. Purchas, Pilgrimage, p 461.

This foresaid late prince Ismael lieth buried in a faire *Meskit*, with a sumptuous sepulchre in the same. Hakluyt's Voyages, I 347.

The very Mahometans have their sepulchres near the *Mesquite*, never in it. Bp Hall, Works, V 414 (Davies)

mesquit², *mesquite² (mes-kēt or mes-kēt'), *n* [Also *mesquite*, *meskit*, etc.; < Sp *mesquite*, of Mex. (?) origin.] 1 An important leguminous tree, or often shrub, *Prosopis juliflora*, growing from Texas to southern California, and thence southward to Chili. It reaches a height of 30 or 40 feet, but is often scrubby, forming dense clumps of chaparral. Under the action of prairie fires it is reduced to a low shrub, developing then an enormous mass of roots, locally known as *underground forest*, of great value as fuel. The wood is heavy and very hard, almost indestructible in contact with the ground, it is used for the*

beams and underpinnings of adobe houses, for posts and fencing, for fuel, and for furniture. It is of a brown or red color, handsome when polished but difficult to work. The bean like pods, before maturity become pulpy and exceedingly rich in grape-sugar. They are eaten by the Indians as well as by whites, and furnish a valuable fodder for horses. The shrub also exudes a gum resembling gum arabic, which in Texas and Mexico is collected in considerable quantities for export. Also called *honey mesquit*, *honey-locust*, *honey pod*, and *July flower*. The Spanish name is *algarroba*.

2 Same as *mesquit-grass* — *Screw-pod mesquit*, a tree *Prosopis pubescens*, similar to *P. juliflora* found from New Mexico to southern California, and in Mexico its pods are twisted into spiral cylinders, whence the above name, and that of *screw-pod*. They are ground into meal and used as food by the Indians, also serving as fodder. The Mexican name is *toronilla*.

mesquit-bean (mes-kēt-bēn), *n*. The fruit of the mesquit-tree.

mesquite¹, *n*. See *mesquit*¹.

mesquite², *n*. See *mesquit*².

mesquit-grass (mes-kēt-grās), *n* A grass, properly of the genus *Bouteloua*, growing on the plains east of the Rocky Mountains, and forming a rich wild pasture. *B. oligostachya* is the most useful species. *Buchloe dactyloides*, included under the name, is sometimes distinguished as *false mesquit*. Also called *buffalo grass* and *granna grass*.

mesquit-gum (mes-kēt-gum), *n* See *mesquit*².

mesquit-tree (mes-kēt-trē), *n* Same as *mesquit*².

metabranial (met-a-bran'ki-al), *a* [< Gr μετα, behind, + βραγχία, gills see *branchial*] Situated behind the gills specifically applied to a posterolateral subdivision of the branchial region of the carapace of a crab, behind and to one side of the metabranchial division, called the *metabranial lobe*. See cut under *Brachyura*

metabrushite (met-a-brush'it), *n* [< Gr μετά, along with, + Ε brushite] In *mineral*, a calcium phosphate allied to brushite, found in the guano of Sombiero, West Indies

Metacanthidae (met-a-kan'thi-dē), *n* pl [NL, (Douglas and Scott, 1865), < *Metacanthus* + -idae] A family of heteropterous insects, typified by the genus *Metacanthus*. They have the head long, the crown quadrangular, the sides lobe like, the first antennal joint clavate, the fourth funiform, and the corium opaque with large transverse depressions between the strong veins

Metacanthus (met-a-kan'thus), *n* [NL (Costa, 1848), < Gr μετά, beyond, + κανθός, the corner of the eye see *canthus*, *can't*] The typical genus of *Metacanthidae*, containing a few European bugs. They are chiefly characterized by the small triangular vertexal face, globose eyes, and large distant ocelli

metacarpal (met-a-kar'pal), *a* and *n* [< *metacarpus* + -al] 1 *a* Of or pertaining to the metacarpus or a metacarpal — **Metacarpal saw**, a narrow bladed saw for dividing the metacarpal (or metatarsal) bones

II. *n* One of the bones of the metacarpus. They are not more than five in number, and are reckoned as first, etc., from the radial or thumb side to the other. When reduced in number they always disappear from the side, so that when but three are left the first and fifth are gone when there is but one it is the third or middle metacarpal. Two or more may fuse into one bone, as in the metacarpus of a cloven footed quadruped, as the ox. In recent birds, all of which have three ankylomedietal carpals, the compound bone is further complicated by fusion with it of certain carpal bones, constituting a carpometacarpus, like the tarsometatarsus of the foot

metacarpale (met'a-kar-pā'lē), *n*, pl. *metacarpalae* (-li-ā) [NL see *metacarpal*] A metacarpal bone, one of the metacarpals

metacarpophalangeal (met-a-kar'pō-fā-lan'-jē-ā), *a*. [< *metacarpus* + *phalanges* + -al]

Pertaining to the metacarpus and the phalanges.

metacarpus (met-a-kar'pus), *n*, pl. *metacarpi* (-pi) [NL (cf Gr μετακαρπιον, the part of the hand between the wrist and the fingers), < Gr. μετά, beyond, + καρπός, the wrist] In *anat*, the second segment of the manus or terminal division of the fore limb of a vertebrate, considered with reference to its bony structure, the segment which comes between the carpus and the phalanges, corresponding to the metatarsus of the foot. In man the metacarpus corresponds to the part of the hand between the wrist and the fingers or thumb, and has five metacarpal bones. In the horse it is the part of the fore leg between the so-called knee and the fetlock joint, and has but one functional bone

metacellulose (met-a-sel'ū-lōs), *n* [< Gr μετά, beyond, + Ε cellulose] Same as *junquus-cellulose*

metacenter, metacentre (met-a-sen'tēr), *n*. [< Ε metacentre, < Gr μετά, beyond, + κέντρον, center] The point at which an upward thrust could be equivalent to the pressure of water upon a floating body which has received a slight rotational displacement about one of the principal axes of its section of flotation. The equilibrium is stable or unstable according as the metacenter is above or below the center of gravity. The term is specifically applied to the point where the vertical line passing through the center of buoyancy of a ship, in the position of equilibrium, meets the vertical drawn through the new center of buoyancy when the ship is slightly tilted to one side or the other. The term was introduced into hydrostatics by Pierre Bouguer, a French geodesist (1698-1758). Also called *center of buoyancy*

metacentric (met-a-sen'trik), *a* [< *metacenter* + -ic] Of or pertaining to the metacenter

Generally speaking, decrease in *metacentric* height is accompanied by a lengthening of the period of an oscillation

metachloral (met-a-klo'ral), *n* [< Gr μετά, along with, + Ε chloral] A white tasteless solid body, insoluble in water, formed when chloral is kept for some time in contact with strong sulphuric acid. It is a polymerid of chloral. It seems to resemble chloral hydrate in its pharmacodynamic properties

metachonanite (met-a-kō'nā-nit), *a* and *n* [< NL *Metachonanites*, q v] 1 *a* Having retrorse septal funnels, as a nautiloid, belonging to the *Metachonanites*

II. *n* A cephalopod of the group *Metachonanites*

Metachonanites (met-a-kō'nā-ni'tez), *n* pl [NL, < Gr μετά, behind, + χωνία, a funnel see *choana*, *choanite*] A group of holochordoid nautiloid cephalopods whose septal funnels are retrorse contrasted with *Prochonanites*. *Huxley, Proc Rost Soc Nat Hist*, 1881, p 260

metachronism (me-tak'ro-nizm), *n* [= F. *metachronisme*, < Gr μεταχρονος, after the time, < μετά, beyond, + χρόνος, time Cf *anachronism*] An error committed in chronology by placing an event after its real date

metachrosis (met-a-krō'sis), *n* [NL, < Gr μεταχρᾶνναι, change the color of a thing, < μετά, beyond, + χρᾶνναι, later form of χρώειν, tinge, stain (> χρᾶναι, a coloring, tinting), < χροία, χροα, surface, skin, color] Color-change, as that of a chameleon

metacinnabarite (met-a-sin'a-bār-it), *n* [< Gr μετά (see *meta-*) + Ε cinnabar + -ite²] Native mercuric sulphid, crystallizing in tetrahedral crystals, resembling those of the zinc sulphid sphalerite, also occurring massive of a black or grayish-black color. It is found with the red mercuric sulphid cinnabar in California

metacism (met'a-sizm), *n*. See *mytæcism*

metacolia (met'a-sē-lī), *n* Same as *metacolia*
metacole (met'a-sē-lī), *n*, pl. *metacoliae* (-ē) [NL, < Gr μετά, beyond, + κολία, a hollow (ventricle)] The fourth ventricle of the brain, especially its posterior portion

 Acts have very lately passed in relation to the admeasurement of *metage* of coals for the city of Westminster. *Dafos, Tour through Great Britain, II 146 (Davies)*
 2. Charge for or price of measuring.
Metageitnion (met-a-gīt'ni-on), *n* [*< Gr Metageitnion, the second month of the Athenian year, said to be so called because it was the moving-month, when people 'changed their neighbors,' < metá, over, + γείτων, neighbor*] The second month of the Athenian calendar, having twenty-nine days, and corresponding to the last part of July and the first part of August
metagelatin, metagelatine (met-a-jel'a-tin), *n* [*< Gr metá, along with, + E gelatin*] In *photog*, a substance which has been used as a preservative in a certain dry collodion process, consisting of a strong solution of gelatin boiled and cooled several times till it ceases to gelatinize and remains fluid
metagenesis (met-a-jen'e-sis), *n*. [NL, *< Gr metá, beyond, after, + γένεσις, production* see *genesis*] In *bot*, that modification of parthenogenesis or alternate generation which is exhibited when an organism passes from the egg to the imago through a series of successively generated individuals differing from one another in form distinguished by Owen from *metamorphosis*, or the transformation of any one individual by the modification of its form as a whole. Metagenesis of one or another kind is exhibited by some insects, as aphids, in which the process

is commonly called *parthenogenesis*, by various internal parasites, as *Diatoma* (see *cuts* under *cerosia*), and strikingly by various hydroids. In the last the cycle includes (1) the free-swimming impregnated ovum, (2) the fixation of this ovum to some submerged object and its development into an organism, (3) the formation by such organism of various zooids, as nutritive and generative zooids, unlike each other and unlike the parent, the whole forming a hydroid colony, and (4) the formation by generative zooids of ova, which on being set free complete the cycle. Thus, in a germinating polyp the ovum is a free-swimming ciliated body, which on fixation develops a mouth and tentacles, and by continued gemination produces two sets of buds, of which the generative set reproduces the free swimming ciliated ova. In other polyps, as *Corymba*, the set of generative buds themselves become detached as free medusoids like jelly fish (see *cut* under *medusoid*), whose eggs develop not into bodiles like the parent medusoid, but into the polypide or polypidom of the hydroid colony on which they were produced. In the *Lucernaria* a similar metagenesis occurs by fission. Herbert Spencer adopts Owen's metagenesis as one of three kinds of his agamogenesis, and considers it as (1) *external*, where new individuals bud from unspecialized parts of the parent, and (2) *internal*, as in the case of the transformations of *Diatoma*. See *metamorphosis*

able, and which possesses opacity, luster of a peculiar kind (commonly called *metallic*, because very characteristic of the metals), conductivity for heat and electricity, and plasticity, or capability of being drawn, squeezed, or hammered with change of shape but no loss of continuity. Examples of metals possessing all these qualities, although in varying degree, are gold, silver, copper, iron, lead, and tin, all of which have been known from remote antiquity, and on the characters which they possess the idea of a metal was, and mainly still is, founded. These metals also have a high specific gravity, the lightest of them (tin) being over seven times as dense as water. Of the prehistorically known metals, gold, silver, and copper occur more or less abundantly in the native or metallic form, and must have been noticed, and in all probability utilized, in the most remote antiquity, by various nations and over widely extended areas. Iron also occurs native, especially in the form of meteoric iron, and in this way may have first become known and utilized. But iron is now, and has been from time immemorial, smelted from its ores in countries which, from almost every other point of view than the metallurgical, might properly be regarded as uncivilized. The use of iron other than meteoric was not, however, known in the New World before the advent of Europeans. Tin and lead do not occur in the metallic form in nature, unless in very minute quantity, hence, where used, these metals must have been obtained by the metallurgical treatment of their ores. In the case of tin and zinc, as well as of other metals not occurring native, it was not until long after some knowledge had been attained in regard to the practical use of their ores, either by themselves or as ingredients in various alloys, that any accurate idea was obtained of the metals themselves. Thus, brass was certainly made long before anything definite had been learned in regard to the metal zinc, and it is not at all unlikely that the same was the case with bronze and one of its constituents, tin. In addition to the six metals already mentioned, quicksilver was known to the Greeks and Romans in classical times, and this metal also occurs not infrequently in the metallic form, so that its early discovery is not a matter to excite surprise. The anomalous occurrence of quicksilver as a liquid at the ordinary temperature was the reason why neither Pliny nor Isidore nor Geber included it among the metals, nor was it so included by writers on chemistry and metallurgy until after it had been discovered that this fluid could be frozen at a not very low temperature, and that when frozen it was malleable. It was not until the fifteenth and sixteenth centuries that antimony, bismuth, and zinc became known, but their ores had long been in use, although, in the case of the two former metals, only to a very limited extent. The discovery of these metals considerably enlarged the scope of the word *metallic*, since it became necessary to admit that metals could be brittle, this was still further exemplified in the case of the metal arsenic, discovered in 1649 (its oxidized combinations had long been known and utilized), which, although having a metallic luster, is decidedly brittle. This brittleness of substances otherwise metallic in appearance led to their being placed in a class by themselves as 'semi metals,' the idea that malleability was a necessary attribute of a metal having come down from the Arabian chemists, and maintaining its hold for many centuries. About the middle and in the latter half of the eighteenth century the number of known metals was greatly increased. In 1741 platinum was discovered, but the metals which are always associated with it—osmium, iridium, rhodium, ruthenium, etc.—were not detected until much later. At about the same time as platinum, nickel and cobalt were recognized as elements—that is, were first separated and distinguished from their ores, which had been long known and (in the case of cobalt, at least) utilized to a limited extent. Toward the end of the eighteenth century manganese, molybdena, tellurium, uranium, titanium, and chromium became known. About the beginning of the nineteenth century several of the metals of the platinum family—palladium, iridium, osmium, rhodium—were separated from the complex alloy known as *native platinum*. Up to this time all the known substances to which the name *metal* was applied were much heavier than water, and also decidedly heavier than those considered as non-metallic. Hence, as the old and long prevailing idea that all metals were malleable had been done away with, a high specific gravity began to be considered as their most important characteristic. Thus we find Cronstedt, who was one of the earliest systematic writers on mineralogy (the first edition of his work was published in 1758), defining metals as "those mineral bodies which with respect to their volume are the heaviest of all hitherto known bodies." With the discovery, by Davy, in 1807, of the metallic nature of the bases of the alkalis a great change took place in this respect, for these substances, metallic from many points of view, especially with reference to their chemical affinities, are lighter than water, and at first, on this account, were by some chemists not admitted to rank as metals. The discovery of the metallic bases of the alkalis was followed by that of the bases of the earths—calcium, barium, and strontium, 1807, rhenium, 1824, aluminum, glucinum, and yttrium, 1828. These metals are all light as compared with the older metals, but heavy in comparison with the metallic bases of the alkalis, the lightest of which—lithium, discovered in 1818—has only a little more than half the specific gravity of water. Cadmium, another heavy metal associated with zinc in its mode of occurrence and of some importance in the arts, was also separated from its oxide in 1818. Many metals have been discovered within the past few years, all of great interest from the scientific point of view, but no one of them of economical importance, or occurring in sufficient quantity to be utilized to any extent even if possessing valuable properties. So doubtful and difficult are the chemical reactions of some of these elements that their exact number cannot be stated. Several have been worked over by chemists for years without any definite conclusion having been reached, several, after having been accepted for a while, have been dropped from the list. There are about seventy generally recognized elements (see *element*), although some three or four of these may still be considered as more or less doubtful. Of the seventy thirteen are decidedly non-metallic, these

are sulphur, phosphorus, fluorine, chlorine, iodine, bromine, silicon, boron, carbon, nitrogen, hydrogen, oxygen, and selenium, all the other elements are considered to be metals, and selenium was formerly generally so considered, but latterly it has been decidedly included among the non-metals, and the name has been changed by some to *selenion*, to make it correspond with *carbon*, *boron*, and *silicon*, with which elements it is to a certain extent chemically affiliated. Tellurium, on the other hand, although closely related chemically to sulphur and selenium, has always been classed among the metals, chiefly because, although brittle, it has a decided metallic luster. The names of the metals, so far as is possible, all end in *-um*, even platinum is frequently written *platinum*. A division of the elements into metals and non-metals is recognized by chemists at the present time as being rather a matter of convenience from the popular point of view than as one capable of exact scientific definition. The words *metalline* and *metal*, however, cannot be dispensed with in common life and the arts, and their use can very rarely lead to any confusion. The exceptions to this general statement that the metals have a "metallic" luster, and that the non-metals do not, are, on the whole, extremely insignificant. Only in the case of selenium and phosphorus in certain of their allotropic forms could there be any question as to whether the term *metalline luster* could properly be used with reference to a non-metal.

Alch metal, or **Alch's metal**, an alloy of about two parts of zinc with three of copper, to which about two per cent of iron is added. This alloy is very malleable at a red heat, and can be hammered, rolled, or drawn into fine wire. It has been used in Austria for cannon, and is believed to have been known to the Chinese—**Antifriction metals**. See *antifriction*.—**Babbitt metal**. [Named from Isaac Babbitt, the inventor (1790-1882).] An alloy of tin with copper and antimony, used for bearings, bushings, or pillow blocks. This alloy consists of 88 per cent of tin, the remaining 12 per cent being made up of the two other metals. Sometimes called *babbitting*.—**Base metals**, in *metal*, the metals not classed as noble especially lead, zinc, copper, and iron.—**Bath metal**. [Named from Bath, England.] A white brass consisting of 65 parts of copper and 45 of zinc. The name is also given to other combinations of the same metals.—**Blue metal**. (a) A well sinkers' name for blue clay. (b) See *blue*.—**Bowl-metal**, a name given to antimony in the second stage of the English smelting process of that metal.—**Britannia metal**, an alloy containing tin, antimony, and copper, to which bismuth, zinc, and lead are occasionally added. The essential metal is tin, which usually constitutes nine tenths or more of the mass, the antimony and copper being added to give the desired hardness. This alloy is extensively used for table ware, being usually, for that purpose, covered with a thin coating of silver, and sold as silver plate. In the best plated ware, however, the silver is laid on a body of German silver.—**Coarse metal**, the technical name of the product of the second operation in the process of smelting mixed cupriferaous ores in Great Britain, especially at Swansea. The product of this operation, which is performed in a reverberatory furnace, is a matte or regulus containing iron and copper in combination with sulphur in about the same proportion in which they are present in copper pyrites, together with slag.—**Composition metal**. See *composition*.—**Dutch metal**. See *Dutch*.—**Fusible metal**, a metallic alloy that fuses at a very low temperature. Such alloys are usually composed of lead, tin, and bismuth. Among those best known are—Newton's metal, containing 8 parts of bismuth, 5 of lead,

and 3 of tin, which fuses at 302°. Rose's metal, 2 parts of bismuth, 1 each of tin and lead, fusing at 301°, and an alloy of 5 parts of bismuth, 3 of lead, and 2 of tin, fusing at 197°. The addition of cadmium to alloys of bismuth, tin, and lead lowers their fusing point considerably. Thus, if from 8 to 10 per cent of cadmium is added to Rose's metal, the melting-point is reduced to 167°. The alloys known as Wood and Wood and Lipinsky's metals are such alloys of cadmium, bismuth, tin, and lead. One of these, containing cadmium 4 parts and tin, lead and bismuth each 5 parts, melts at 160°. The addition of mercury to fusible alloys like Newton's and Rose's metals is said also to lower their fusing point considerably.—**Gathered metal**. See *laden metal*, under *laden*.—**Gedger's metal**. Same as *Alch metal*.—**Heavy metal**. See *heavy*.—**Kier's metal**, a gun metal composed of 100 parts of copper, 75 of zinc, and 10 of iron.—**Laden metal**. See *laden*.—**Light metal**, any metal of which the specific gravity is less than 5.—**Magnetic metals**, iron, nickel, cobalt, chromium, and manganese.—**Muntz's metal**. [Named from Mr. Muntz of Birmingham, the inventor.] Yellow metal, an alloy of 3 parts of copper and 2 of zinc, differing from common brass in being malleable when hot. It is cheaper and can be more easily rolled than copper, and has taken its place as the material used for sheathing, formerly one of the most important uses to which copper was put. Yellow metal is its general commercial name. Also called *patent metal*.—**Newton's metal**. See *fusion metal*, above.—**Noble or perfect metals**, gold, silver, and platinum, so called because when exposed to the air they do not oxidize like other metals, but retain their metallic luster.—**Organ- or pipe-metal**, an alloy of tin and lead, with or without zinc, used for the construction of organ pipes. The value of the metal depends principally upon the proportion of tin used, less than 50 per cent, making poor metal. A fair percentage of tin is indicated by a spotted surface, hence good metal is also called *spotted metal*.—**Patent metal**. Same as *Muntz's metal*.—**Pimple-metal**. See *white metal*.—**Point of fusion of metals**. See *fusion*.—**Prince's metal**, an alloy said to have been so called because first prepared by Prince Rupert (1619-82), nephew of Charles I. of England, who invented, or at least introduced into England, the so-called "Prince Rupert's drops." There is no certainty in regard to the composition of the alloy called prince's metal. By most writers it is said to have been a kind of brass, others describe it as an alloy of copper and arsenic.—**Rose's metal**. See *fusion metal*, above.—**To burn metals together**. See *burn*.—**White metal**, the product of the fourth operation in the smelting of mixed cupriferaous ores (according to the English process). The object of this stage of the process is to remove the iron, and the work is done in a reverberatory furnace, the third stage having been a calcination of the coarse metal, with the object of converting the sulphur of iron into an oxide. The product of the fourth operation is variously designated as *blue white*, or *pimple metal*, according to the percentage of copper contained and the peculiar appearance exhibited. Portions having a smooth lustrous fracture, and containing from 60 to 70 per cent of copper, are designated as *blue metal*; those of grayish white color, with granular fracture, and containing from 75 to 78 per cent of copper, are called *white metal*. *Pimple metal* is that which contains more than 78 per cent of copper, and has its surface pimpled from the escape of sulphurous acid gas.—**Wood's metal**. See *fusion metal*, above.—**Yellow metal**. Same as *Muntz's metal*.

metal (met'al), *v* *t*, pret and pp *metaled* or *metalled*, ppr *metaling* or *metalling* [*< metal*, *n*] To put metal on, cover, as roads, with broken stones or metal.

metalliform (me-tal'i-fōrm), *a* [= *F* *metalliforme*, < *L.* *metallum*, a metal, + *forma*, form] Having the form or properties of metal, like metal

metallify (me-tal'i-fi), *v t*, pret and pp *metallified*, ppr *metallifying* [*< metal + -fy*] To convert into metal

The Augustin process of silver extraction is only a peculiar mode of *metallifying* and collecting the silver of an ore after it has been by some preliminary operation converted into chloride or sulphate. *Encyc Brit*, XXII 70

metallikon (me-tul'i-kon), *n* [*< Gr* *μεταλλικόν*, neut of *μεταλλικός*, of metal, metallic see *metallie*] An English art of intellectual surface-decoration, consisting of glass plates on which are cemented ornaments of glass, terra-cotta, etc

metalline (met'al-in), *a*. [= *F* *metallin* = *It* *metallino*, as *met* + *-ine*¹] Of a metallic nature or quality, consisting of or like metal, containing metal as, *metalline* water

The quicksilver [was] by this means brought to appear a very close and lovely *metalline* cylinder, not interrupted by interspersed bubbles as before. *Boyle, Works*, I 49

metalling, *n* See *metaling*

metallist, **metallist** (met'al-ist), *n* [*< metal* (*L.* *metallum*) + *-ist*] 1 A worker in metals, or one skilled in the knowledge of metals

The skillful *metallist* that findeth and refineth those precious veins for public use, is rewarded, is honoured. *Rp Hall, Epistles*, v 7

2. An advocate of the use of metal (silver or gold) as currency. Compare *bimetallist*, *monometallist*

Perhaps for this reason he has recently reaped a golden harvest by carrying out the principles of the silver *metallists*. *Science*, VIII 75.

metallization (met'al-i-zā'shon), *n* [= *F* *métallisation* = *Sp* *metallización* = *It* *metallizzazione*, as *metallize* + *-ation*] The act or process of metallizing, or forming or transforming into a metal. Also spelled *metallisation*. — **Metallization of wood**, the impregnation of wood with an inorganic substance, by which the pores become so completely filled that the wood acquires, to a certain extent, the qualities of a mineral

metallize (met'al-iz), *v t*, pret and pp *metallized*, ppr *metallizing* [= *F* *metalliser* = *Sp* *metallizar* = *It* *metallizzare*, as *met* + *-ize*] To form or transform into metal, render metallic. Also spelled *metallise*. — **Metallized glass**. See *glass*

metallochrome (me-tal'o-krom), *n* [*< Gr* *μεταλλοχρῶμα*, a metal, + *χρῶμα*, color] A beautiful prismatic tinting imparted by electrolytic action to polished steel plates by depositing on them a thin film of oxid of lead

metallochromy (met'al-o-kro'mi), *n* [As *metallochrome* + *-y*³] The art or process of coloring metals

Metallochromy is used to produce decorative effects upon objects of copper, tombac, and brass, previously treated to a thin electroplating. *W H Wahl, Galvanoplastic Manipulations*, p 407

metallographic (met'al-o-gru'fik), *a* [*< metallograph-y* + *-ic*] Of or pertaining to metallography

metallographist (met'al-o-gra-fist), *n* [*< metallograph-y* + *-ist*] A writer on metallography

metallography (met'al-log'ra-fi), *n* [= *F* *métallographie* = *Sp* *metallografía* = *Pg* *metallographia*, < *Gr* *μεταλλογραφία*, a metal, + *-γραφία*, < *γραφειν*, write] 1 An account of metals, or a treatise on metallic substances, the science of metals — 2 A process of decorating metals. It consists of a simple system of printing from wooden blocks in such manner as to produce an imitation of the grain of the wood

3. A method of engraving, allied to lithography, in which metallic plates are substituted for stones

metalloid (met'al-oid), *a* and *n* [= *F* *métalloïde*, < *Gr* *μεταλλοειδής*, metal, + *ειδής*, form] 1. *a* Relating to metalloids, like metal; having the form or appearance of a metal

II. *n* In *chem*, a term which has been variously applied as, (*a*) to the metallic bases of the fixed alkalis and alkaline earths, probably in consequence of their low specific gravity, and (*b*) to all the non-metallic elementary substances. In the latter sense it is now used by chemists. The metalloids are thirteen in number: oxygen, hydrogen, nitrogen, carbon, chlorine, bromine, iodine, fluorine, sulphur, selenium, phosphorus, boron and silicon. The distinction between a metal and a metalloid is, however, purely artificial, being based on physical rather than chemical criteria. But, broadly, a metal may be said to differ from a metalloid in being an excellent conductor of heat and electricity, in reflecting light more or less powerfully, and in being electropositive. Though a metalloid may possess one or more of these characters, it will not be

found to unite them all. Berzelius, in his classification, restricts the term *metalloid* to the inflammable non-metallic elements—sulphur, phosphorus, carbon, and boron. See *element*, 3, and *metal*, 1

metalloidal (met'al-oi'dal), *a*. [*< metalloïd* + *-al*] Of or pertaining to a metalloid or metalloids, of the nature of a metalloid

Long heat-waves in their action upon *metalloidal* molecules only produce bands and fluted spaces. *J N Lockyer, Spect Anal*, p 175

metallophone (me-tal'ō-fōn), *n* [*< Gr* *μεταλλοφων*, a metal, + *φωνη*, a sound] 1 A piano-forte with graduated metal bars instead of strings. — 2 An instrument like the xylophone, but with metallic instead of wooden bars

metalloplastic (met'al-lō-plas'tik), *a* [*< Gr* *μεταλλοπλαστικός*, metal, + *πλάσσειν*, mold, form] Pertaining to the arts of depositing metals or obtaining metal casts by either electric or chemical methods

metalloscopic (met'al-lō-skop'ik), *a* [*< metalloscop-y* + *-ic*] Of or pertaining to metalloscopy

Metalloscopic phenomena are most analogous to those here described. *Amer Jour Psychol*, I 503

metallurgy (met'al-lō-skō'pī), *n* [*< Gr* *μεταλλουργία*, metal, + *σκευαίνω*, view] The art of determining by external application what metals or metallic substances act most easily and favorably upon a given person. *Buck's Handbook of Med Sciences*, IV 749

metallotherapeutic (met'al-lō-ther-a-pū'tik), *a* Pertaining to metallotherapy

metallotherapy (met'al-lō-ther'a-pi), *n* [*< Gr* *μεταλλοθεραπεία*, metal, + *θεραπεία*, medical treatment] The treatment of disease by the external application of metals. First formulated as a system by Burq in 1818, and hence often called *Burqism*, it has been recently revived by Charcot. Simple disks of various metals are employed in contact with the external parts of the body, from which different therapeutic results are claimed. Other observers assert that all the phenomena described as following the application of metals may be produced by disks of wood, and that whatever curative results are attained are due to mental effects, rather than to any special virtues emanating from the metals themselves.

metallurgic (met'al-lér'jik), *a* [= *F* *metallurgique* = *Sp* *metallurgico* = *It* *metallurgico*, < *NL* *metallurgicus*, < *metallurgia*, metallurgy see *metallurgy*] Pertaining to metallurgy, or the art of working metals. — **Metallurgic chemistry**, that part of chemistry which teaches the combinations and analyses of metals

metallurgical (met'al-ér'ji-kal), *a* [*< metallurgic* + *-al*] Relating to or connected with metallurgy, belonging to the working of metals as, *metallurgical* investigations or pursuits

metallurgically (met'al-ér'ji-kal-i), *adv* By metallurgical methods, as regards metallurgy

metallurgist (met'al-ér-just), *n*. [= *F* *metallurgiste* = *Sp* *metallurgista* = *Pg* *metallurgista*, as *metallurg-y* + *-ist*] One who is versed in the science of metallurgy, one who scientifically studies the operations of the smelter

metallurgy (met'al-ér-ji), *n* [= *F* *metallurgie* = *Sp* *metallurgia* = *Pg* *It* *metallurgia*, < *NL* *metallurgica*, < *Gr* *μεταλλουργία*, working metals, a minor, < *μεταλλο*, a mine (metal), + *εργον*, work] The science of smelting. In smelting, the metals are separated by known methods from the mineralizing substances with which, with few exceptions, they naturally occur combined. Thus, the common ore of lead is galena, a combination of sulphur with that metal. The smelter treats this combination in the furnace, and the result is metallic lead. The treatment of some ores is simple and easy, that of others is difficult and complex. Smelting implies the use of fire, or separation of the metal in the dry way, but processes carried on in the humid way are not unfrequently employed in the treatment of metallic ores. This is not ordinarily called smelting, but metallurgical treatment. The ores of many mining regions are treated at or near the place where they are mined, but it is not at all uncommon for ores to be carried to a great distance to be smelted. Thus, until within a few years, a large part of the copper used in the world was smelted at Swansea, in Wales, from ores brought from various countries, metallurgical skill and the command of cheap fuel making it desirable to have the ore treated there rather than at the place where it was mined. Abbreviated *metall.*

metalmant (met'al-man), *n* [*< metal* + *man*.] A worker in metals; a coppersmith or tinman.

A smith, or a *metalmant*, the pot's never from his nose. *Burton, Anat of Mel*, p 110

metalogic (met'al-ōj'ik), *n* [*< Gr* *μετάλογος*, after, + *E* *logos*] The part of metaphysics which concerns logic

metalogical (met'al-ōj'i-kal), *a* [As *metalogic* + *-al*] Beyond the province of logic, transcending the sphere of logic

metal-plane (met'al-plān), *n* A form of plane used to face soft metal plates by taking fine shavings from them. The angle of the cutter

with the sole is adapted to the hardness of the metal to be worked

metal-saw (met'al-sā), *n*. A hard steel saw with fine teeth, stretched in a frame and used for sawing metal

metal-wheel (met'al-hwēl), *n*. In *grinding* and *polishing*, a lap

metal-work (met'al-wérk), *n* Work, especially artistic work, in metal

metamathematics (met-a-math-ē-mat'iks), *n* [*< Gr* *μεταμαθηματικά*, mathematics] The metaphysics of mathematics; the philosophy of non-Euclidean geometry and the like

metamer (met'a-mēr), *n* [See *metamere*] A compound which is metameric, or exhibits the property of metamorphism

The two methyl and ethyl *metamers* seem distinguishable. *Philos Mag*, XXV 285

metamere, *n*. Plural of *metameron*.

metameral (met'a-mē-ral), *a* [*< metamere* + *-al*] 1. Pertaining to or comprising metameres, having correspondence or agreement between parts — 2 In *zool*, same as *metameric*.

metamere (met'a-mēr), *n* [Also *metameron*, < *Gr* *μετά*, after, + *μέρος*, a part] In *zool*, one of a longitudinal series of parts which are serially homologous with one another. See *metamerism*, *metamerism*

The construction of bilaterally symmetrical bodies by metameres is common and usual in the animal kingdom, and is exhibited in such diversity of details that metameres have received several different names. The most general name is *segment*, but, since several morphologically distinct metameres may coalesce in one segment, the stricter term for an individual metamere, such as each morphological segment or ring of an annelid, crustacean, insect, or other articulate animal, is *somite* or *arthromere*. A morphological metamere of a vertebrate has been called a *dermatomere*. Compare *actinomere* and *antimer*. **Ambulacral metameres**. See *ambulacral*

metameric (met-a-mēr'ik), *a* [As *metamere* + *-ic*] 1. In *chem*, pertaining to or characterized by metamorphism — 2 In *zool*, of or pertaining to a metamere or metameres, being a metamere, or resulting from metamorphism; situated in the long axis of the body as one of a longitudinal series of like parts, segmental, somitic

metamerically (met-a-mēr'ik-al-i), *adv* So as to be metameric, in or by way of metamorphism, as a metamere

metamerism (met'a-mēr-izm), *n* [As *metamere* + *-ism*] 1 In *chem*, a form of isomerism, that property of certain compound bodies by which they have the same chemical elements combined in the same proportion and with the same molecular weight, while differing in chemical properties. Thus, acetylene and ethylene oxide have their elements in the same proportion, C₂H₂O, and the same molecular weight, 44, but are very different in their chemical properties. Two metameric bodies do not, however, belong to the same class or series of compounds. See *isomerism*, *polymerism*.

2 In *zool*, a metameric condition, the state of being metameric, segmentation of the body of an animal along the primary or longitudinal axis, resulting in a series of more or less similar consecutive parts which are serially homologous. See *metamere*, *antimer*

metamerization (met-a-mēr-i-zā'shon), *n* [*< metamere* + *-ation*.] Division into metameres

A very regular internal *metamerization*. *Encyc Brit*, XVII 322

metamerize (met'a-mēr-iz), *v t*, pret and pp *metamerized*, ppr *metamerizing* [*< metamere* + *-ize*] To make metamorous, divide into metameres

Although the vertebrate body is a metameric one, this archinephric duct is not a *metamerized* organ. *Gegenbaur, Comp Anat (trans)*, p 602

metamorphic (met-a-môr'fik), *a*. [= *F* *métamorphique*, as *Gr* *μετά*, among (denoting interchange), + *μορφή*, form, + *-ic* Cf *metamorphosis*] 1. Producing metamorphosis; changing the form or structure; transforming as, a *metamorphic* cause or agency; *metamorphic* action — 2 Exhibiting metamorphosis or metamorphism, changed in form or structure; metamorphosed. — **Metamorphic rocks**, in *geol* See *metamorphism*.

metamorphism (met-a-môr'fizm), *n*. [As *metamorph-ic* + *-ism*.] The process of metamor-

phosing, or changing the form or structure; specifically, chemical change and rearrangement of the constituents of a rock by which they are made to assume new forms and enter into new combinations, the most important result of these changes being that the rock becomes harder and more crystalline in structure. Thus, the metamorphic slates are crystalline schists. The sedimentary rocks, especially those made up of the debris of feldspathic minerals, are those most liable to undergo metamorphism, hence it is that the argillaceous rocks offer the most conspicuous examples of this process, and it is these which are most altered in external characters by it, foliation and slaty cleavage being often highly developed in the process. Volcanic rocks also are subject to metamorphic changes, although the results are usually much less conspicuous to the eye unaided by a microscope than in the case of the sedimentary deposits. Examples of metamorphism are the conversion of ordinary earthy limestone into crystalline marble, of argillaceous shales into various kinds of schists (mica-schist, talc-schist, etc.), and of sandstone into quartzite. Closely connected with the phenomena of metamorphism is the development in a rock of a slaty cleavage or of a foliated structure. Metamorphic agencies and the results which they have brought about have been much studied of late years by geologists, and the modern methods of lithological research have been most important aids in this direction. The most obvious and generally accepted classification of metamorphic action is into "contact" and "regional" metamorphism. In the case of contact metamorphism the changes observed are apparently due—in large part, at least—to the presence of an adjacent mass of rock, usually of an intrusive character, as when the strata are seen to have been altered along the walls of a dike. In the case of regional metamorphism, when large masses of rock are found to have been affected and rendered crystalline without any special cause being visible in the form of adjacent intrusive or igneous material, the phenomena are more difficult of explanation than in the case of contact metamorphism. In the course of the numerous discussions of this subject a great number of new terms have been introduced, the meaning of which is, owing to the complexity of the phenomena and the imperfection of the observations, often rather obscure, some of these terms may here be cited. As synonyms of "regional" metamorphism, the epithets "normal" and "general" have been used by some authors, while others have indicated a desire to specialise in their application. Thus, Prestwich limits "normal metamorphism" to the changes due to central heat, and "regional metamorphism" to changes effected by the heat produced locally within the crust of the earth by transformation into heat of the mechanical work of compression or of crushing of parts of the earth. Bonney desires to reserve the phrase "regional metamorphism" for those ancient rocks occupying extensive areas of the earth's surface "which, whatever be their history, are in all probability by no means in their original condition." Dana prefers "local" to "contact," but does not use the two exactly as synonyms, since he makes local "include changes due to heated emanations and other conditions where there are no contacts"—in other words he uses "local" rather as the opposite of "general," ignoring the idea embodied in the term "contact," namely that a visible cause of the observed metamorphism is present in the form of an adjacent mass of intrusive or heterogeneous rock. Kinahan proposes "metapopsis" and "paroptosis" as the synonyms of regional and contact metamorphism. "Why we need to go to the Greek for [the] two words is not clear" (Dana). Many geologists are of the opinion that the movements which the rocks composing the earth's crust have undergone in certain regions, which movements must necessarily have been accompanied by pressure, stress, shearing, or "flow," have been among the most important causes of metamorphic change. The most comprehensive term by which metamorphism originating in conditions of this kind has been designated is that introduced by Rosenbusch, "dynamical." Other writers on this subject have used as being nearly or quite synonymous with "dynamical" the following: "pressure," "compression," "mechanical," "friction," "dislocation." Judd has introduced the term "static metamorphism" as indicating changes which may have taken place in deep seated rocks quite independently of any movement to which they have been subjected. As designating and discriminating between various kinds of metamorphic changes, with special reference to the character of the results produced, Dana has introduced the terms "crystalline," "paramorphic," and "metaschismic." The first of these implies a simple development of a crystalline condition in the original material, such, for instance, as takes place in the conversion of limestone into marble ("marmorosis" of Gekko), the second, a change from one paramorphic state to another, as from augite to hornblende, the third, a change through chemical transformations, as of chrysotile to serpentine. "Metasomatic metamorphism" (or, in one word, "metasomatosis") and "methylosis" are terms which have been suggested in this connection but which have met with little favor. They were apparently intended by their authors to include chemical changes similar to those which take place in the formation of pseudomorphs, and are allied to the "metaschismic" of Dana. "Metastasis" and "metaschismic" are terms which have been coined, but have not become current—the one to denote changes somewhat similar to those included by Dana under "crystalline," the other (as defined by that author) to "denote changes like the conversion of a mass of mud into a mass of quartz with mica and other silicates."

metamorphize (met-a-môr'fiz), *v. t.*, pret. and pp. *metamorphized*, ppr. *metamorphizing* [As *metamorpho*-to + *-ize*.] To change; transform; metamorphose. *De Quincey.*

metamorphology (met'a-môr-fol'ô-jî), *n.* [*Gr. μεταμορφωσις* (metamorphôsis), a transformation (see *metamorphosis*), + *-λογία* (lóγια, *logy*, speak see *-ology*.)] In *bot.*, the science of the metamorphoses or changes which an individual undergoes from

the time it ceases to be an embryo to the time it ceases to live as a bodily organism. Metamorphology and embryology together constitute ontogeny.

As soon as the organism has left [the egg-coverings], it is no longer an embryo. The later changes of this form the subject of the science of metamorphoses, or metamorphology. *Haeckel, Evol. of Man* (trans.), II 460

metamorphopsia (met'a-môr-fop'si-ä), *n.* [*Gr. μεταμορφωσις* (metamorphôsis), + *ὥψ*, eye] A pathological condition of the eyes in which objects appear elongated, irregular, or confused.

metamorphoscope (met-a-môr'fô-skôp), *n.* [*Gr. μεταμορφωσις* (metamorphôsis), + *σκοπεῖν*, view] A toy in which pictured forms of human beings or other animals are made to interchange heads, bodies, legs, or wearing-apparel. The pictures are drawn or painted on a series of bands of muslin or paper, each having independent motion on rollers in a box, and each of a different length from the others. The bands are arranged with their edges as near together as possible, and the figures are painted across the entire series. The motion of the bands is made constantly to displace the parts of the different figures and recombine them in ludicrous fashion at a slot in the cover of the box.

metamorphose (met-a-môr'fôz), *n.* [*F. métamorphose* = *Sp. metamorfosis* or *metamorfosis* = *Pg. metamorphose* = *It. metamorfosi*, *L. metamorphosis*, *Gr. μεταμορφωσις*, a transformation (see *metamorphosis*)] A transformation in shape or character, metamorphosis.

My metamorphose is not held unfit.

Middleton, Family of Love, iv 2.

metamorphose (met-a-môr'fôz), *v. t.* pret. and pp. *metamorphosed*, ppr. *metamorphosing*. [= *F. métamorphoser*, *Gr. μεταμορφώω*, *n., metamorphosis*] To change into a different form; alter or modify the shape or character of, transform; transmute.

Thus men (my lord) be metamorphosed.

From seemly shape, to byrds, and ougly beasts.

Gauecigne, Complaint of Philomena

Thou, Julia, thou hast metamorphosed me.

Shak., T. G. of V., I 1 66.

The priest was metamorphosed into knight.

Browning, Ring and Book, I 186

= *Syn. Transmute*, etc. See *transform*.

metamorphoser (met-a-môr'fô-zér), *n.* One who or that which metamorphoses.

What shall I name this man but a beastly metamorphoser, both of himself and of others?

Gauecigne, Delicate Diet for Dronkarles.

metamorphosis (met'a-môr'fô-sis), *a.* [*Gr. μεταμορφωσις* + *-ισ*] Causing metamorphosis, transforming, relating to or depicting metamorphoses.

All the metamorphosis fables of the ancients, turning policed and commercial people into horrid and savage monsters, will like clouds before the sun, dispel and evaporate before the light of truth.

Pennell, On Antiquities, p 69 (*Latham*)

metamorphosis (met-a-môr'fô-sis), *n.*; pl. *metamorphoses* (-séz) [Formerly also *metamorphose*, *q. v.*, *L. metamorphosis*, *Gr. μεταμορφωσις*, a transformation, *Gr. μεταμορφωσθαι*, be transformed, *Gr. μετά*, over, + *μορφή*, form, shape] 1 Change of form or structure, transmutation or transformation. Used most frequently in literature with reference to the old or poetic conception of a miraculous transmutation of a person, animal, or thing into a different and often antagonistic or contrasting form, either with or without a corresponding change of nature.

With Severn she along doth go,

Her metamorphosis to show.

Drayton, Polyolbion, vi 1, Arg

I wondered at such a *Metamorphosis* in so short a time, he told me it was for the Death of his Wife that Nature had thus antedated his Years. *Hovell, Letters*, I iv 26.

Where is the gloriously decisive change,

The immeasurable metamorphosis

Of human clay to divine gold?

Browning, Ring and Book, II 217

2 A marked change in the form or function of a living body, a transformation resulting from development, specifically, in *zool.*, the course of alteration which an animal undergoes after its exclusion from the egg, and which modifies extensively the general form and life of the individual, particularly, in *entom.*, the transformations of a metableous insect.

The term *metamorphosis*, in its technical entomological sense is applied only to that succession of changes of which a definite pupal condition forms the middle term. *Huxley, Anat. Invert.*, p 361

3, In *chem.*, that chemical action by which a given compound is caused, by the presence of a peculiar substance, to resolve itself into two or more compounds, as sugar, by the presence of yeast, into alcohol and carbonic acid.—4 In *bot.*, the various changes that are brought

about in plant-organs, whereby they appear under changed or modified conditions, as when stamens are metamorphosed into petals, or stipules into leaves. Metamorphosis does not imply that the petal for example, has ever been a stamen, but it implies an alteration in the organizing force, which took effect at a very early period in the life of the organ, at or before the time when the primitive aggregation of cells became differentiated into the several parts of which it is normally composed. It is due merely to the fact that the development of the organ has pursued a different course from what is usual. The various kinds of metamorphoses are described under the names of *chlorosis*, *petalody*, *phyllody*, *stomatody*, *sepalody*, *stamody*, etc. (which see). — **Coarctate metamorphosis**. See *coarctate*. — **Complete metamorphosis**. See *holometaboly* and *complete*. — **Imperfect or incomplete metamorphosis**. See *hemimetaboly* and *imperfect*. — **Metamorphosis of organs**, in *bot.*, the progressive adaptation of one organ to several different purposes, connected with which are changes in size, color, and other particulars. Thus, all the parts of a plant are reducible to the axis and its appendages, the other parts developing themselves from these. See *morphology*. — **Progressive metamorphosis**, transformation from a lower or more simple to a higher or more complex substance, anabolism. — **Retrogressive metamorphosis**, transformation from a higher or more complex to a lower or more simple substance, catabolism (often called *retrograde metamorphosis*). = *Syn.* 1 See *transform*, *v. t.*

metamorphostical (met'a-môr-fost'ik-al), *a.* [Irreg. < *metamorphosis* + *-t-* + *-al*] Pertaining to or effected by metamorphosis. *Pope*

metamorphotic (met'a-môr-fot'ik), *a.* [*Gr. μεταμορφωσις* (-ot-) + *-ic*] Pertaining to or of the nature of metamorphosis, consisting in transformation.

The epithelial cells lining the uterine tubules undergo metamorphotic changes. *N. Y. Med. Jour.*, XL 402

Metamorphotic system, in *entom.*, a scheme of classification first proposed by Swammerdam based on the characters of the metamorphoses and the condition of the larva and pupa, whether resembling the adult or differing from it more or less widely. This scheme, improved by subsequent authors and combined with characters drawn from the study of perfect insects, is the basis of the best modern systems of entomological classification.

metamorph (met'a-môr'h), *n.* [*Gr. μετα*, beyond, + *μορφή*, form] Same as *metamorphosis*, 4.

metanauplius (met-a-nâ'pli-us), *n.*, pl. *metanauplii* (-i) [NL, < *Gr. μετά*, after, + NL *nauplius*, *q. v.*] A later stage in the development of some crustaceans, after the first nauplius form, and before the zoea stage is reached, a crustacean of this later naupliiform character.

metanephron (met-a-nef'ron), *n.*, pl. *metanephra* (-râ) [NL, < *Gr. μετά*, behind, + *νεφρός*, kidney, see *nephritis*] The most posterior and latest-formed segment of an embryonic renal organ, or section of the Wolffian body from which the permanent kidney is derived, and whose duct becomes a ureter distinguished from *pronephron* and *mesonephron*.

metanotal (met-a-nô'tal), *a.* [*Gr. μετανότος* + *-al*] Situated on or pertaining to the metanotum as, a *metanotal* sclerite.

metanotum (met-a-nô'tum), *n.*, pl. *metanota* (-tâ) [NL, < *Gr. μετά*, behind, + *νῶτος*, vótos, the back] The dorsal part of the metathorax of an insect, succeeding the mesonotum and preceding the abdomen, the third and last segment of the notum. It is divided typically into four sclerites, called *praescutum*, *scutum*, *acutellum*, and *postscutellum*, most of which are usually distinguishable. — **Lateral callosities of the metanotum**. See *lateral*.

metapapapteron (met'a-pa-rap'te-ral), *a.* [*Gr. μεταπατερων* + *-al*] Of or pertaining to the metapapapteron.

metapapapteron (met'a-pa-rap'te-ron), *n.*, pl. *metapapaptera* (-ra) [NL, < *Gr. μετά*, with, + NL *papapteron*] In *entom.*, the papapteron of the metathoracic segment, the third sclerite of the metapleuron.

metapepsis (met-a-pep'sis), *n.* [NL, < *Gr. μετά*, beyond, + *πέψις*, a cooking (boiling), < *πέπτω*, cook, boil see *peptic*] In *lithol.*, a term suggested by G. H. Kinahan, but not generally adopted, as a synonym for what is generally called *regional metamorphism*. See *metamorphism*.

One kind of Metamorphism is Regional, or extends over large areas. The rocks affected by it seem to have been under the influence of intensely heated water or steam, which, as it were, stewed them, from which the action may be called *metapepsis*.

G. H. Kinahan, *Geol. of Ireland*, p 175.

metaph. An abbreviation of *metaphysics*.

metaphery (me-taf'e-ri), *n.* [*Gr. μεταφύρειν*, carry over, transfer, see *metaphor*. Cf. *periphery*] In *bot.*, the transposition or displacement of various floral organs, as when petals that are normally alternate with the sepals are placed in front of them, as rarely occurs in *Fuchsia*.

metaphor (met'-a-for), *n* [= F *métaphore* = Sp *metáfora* = Pg *metáfora* = It *metafora*, < L *metaphora* < Gr *μετάφορα*, a transfer to one word of the sense of another (L *translatio*), < *μετα-φerein* carry over, transfer, < *μετα*, over, + *φerein*, carry, = E *bear*!] A figure of speech by which, from some supposed resemblance or analogy, a name, an attribute, or an action belonging to or characteristic of one object is assigned to another to which it is not literally applicable, the figurative transfer of a descriptive or affirmative word or phrase from one thing to another, implied comparison by transference of terms as, the ship spread its wings to the breeze, "Judah is a lion's whelp," Gen xlix 9 If Jacob had said, "as like or resembles a lion's whelp," the expression would have been a simile instead of a metaphor. A simple metaphor is contained in a single word or phrase, like those in italics above, a *concealed* metaphor is one in which the figurative description or characterization is maintained throughout a variety of phrases or applications. See *simile* and *trope*.

What else is your *Metaphor* but an inversion of sense by transport, your allegories by a duplicity of meaning or dissimulation vnder covert and dark intentions?

Puttenham, *Arte of Eng Poesie*, p 128

Whatever here seems beautiful, seem'd to be
But a faint *Metaphor* of Thee

Onley, *The Mistress*, Not Fair

A metaphor is no argument, though it be sometimes the gunpowder to drive one home and hush it in the memory

Lowell, *Democracy*

Mixed metaphor, a figurative expression in which two or more metaphors are confused, as in the following quotation

Where still to use your lordship a trope
The level of obedient slopes
Upward and downward, as the stream
Of hydra faction ticks the beam!

T. Moore, *To Lord Castlereagh*

= *Syn. Comparison, Allegory* etc. See *simile*
metaphoric (met'-a-for'-ik), *a*. [= F *métaphorique* = Sp *metáforico* = Pg *metáforico* = It *metaforico*, < L *metaphoricus* (in adv *metaphorice*), < Gr *μεταφορικόν*, relating to metaphor, < *μεταφορα*, metaphor. See *metaphor*] Same as *metaphorical*

metaphorical (met'-a-for'-i-kal), *a* [*metaphoric* + *-al*] Pertaining to or of the nature of metaphor, consisting of or abounding in metaphor, not literal as, a *metaphorical* expression, a *metaphorical* use of words

How dangerous it is in sensible things to use *metaphorical* expressions unto the people, and what absurd conclusions they will swallow in their literals

Sir T. Browne, *Vulg Err*, iv 10

metaphorically (met'-a-for'-i-kal-i), *adv* In a metaphorical manner or sense, by way of metaphor, not literally

metaphoricalness (met'-a-for'-i-kal-nes), *n* The state or quality of being metaphorical

metaphorist (met'-a-for-ist), *n* [*metaphor* + *-ist*] One who coins or uses metaphors

Let the poet send to the *metaphorist* for his allegories

Martinius Scriblerus

metaphosphate (met'-a-fos'-fāt), *n* [*metaphosphoric* + *-ate*] A salt formed by the union of metaphosphoric acid with a base

metaphosphoric (met'-a-fos-for'-ik), *a* [*Gr. μετὰ*, with, + E *phosphoric*] Pertaining to, produced from, or resembling phosphorus or phosphoric acid — **Metaphosphoric acid**, *HPO₃*, an acid obtained by burning phosphorus under a bell glass filled with air or oxygen and absorbing the fumes in water, or by heating orthophosphoric acid to redness. When the water is evaporated the acid is left as a soft, very deliquescent mass. The glacial phosphoric acid of commerce is metaphosphoric acid with soda as an impurity

metaphragm (met'-u-frām), *n* [*NL. metaphragma*, partition, < Gr *μετὰ*, over, + *φραγμα*, fence, screen. See *diaphragm*] In *entom*, the metapostscutellum, which is visible exteriorly in some insects, but in others is internal, forming a transverse partition at the base of the abdomen

metaphragma (met'-a-frag'-ma), *n*, pl *metaphragmata* (-ma-ta) [*NL.*] Same as *metaphragm*

metaphrase (met'-u-frāz), *n* [= F *métaphrase* = Sp *metáfrasis* = Pg *metáfrase*, < NL *metaphrasis*, < Gr *μετὰφρασις*, a translation or paraphrase, < *μετὰφραζειν*, change from one style to another, as from poetry to prose, < *μετὰ*, over, + *φραζειν*, speak. See *phases*. Cf *paraphrase*, *periphrase*] 1 A translation, specifically, a verbal translation, a close version or translation from one language into another opposed to *paraphrase*

His *metaphras* of the Psalms is still in our hands

Bp Hall, *To Mr Burton*

metapophysis (met-a-pōf'-i-sis), *n.* [*< Gr. μετά, after, + απόφυσις, a process see apophysis*] In *anat.*, a dorsolateral apophysis developed on the prezygapophysis or anterior articular process of a vertebra, especially in the lumbar region. It corresponds to the inner tubercle of the diapophysis of a thoracic vertebra. It is sometimes very highly developed, as in the armadillo, when it assists in

the support of the carapace. In man, in whom it is rudimentary yet is endogenous or enveloped from an independent center of ossification, it is found in the lumbar region, as the mammillary process or mammillary tubercle. See *cut under lumbar*

metapore (met'-a-pōr), *n.* [*< NL. metaporus, < Gr. μετά, behind, + πόρος, passage. see poric*] A small blind pore in the median line of the medulla oblongata immediately behind the pons Varoli, the so-called foramen of Magendie.

metapostscutellar (met'-a-pōst-skū'tel-ār), *a.* [*< metapostscutellum + -ar*] Of or pertaining to the metapostscutellum

metapostscutellum (met-a-pōst-skū'tel'-um), *n.* pl *metapostscutella* (-ā) [*< NL. < Gr. μετά, behind, + NL. postscutellum, q. v.*] The postscutellum of the metanotum; the postscutellar sclerite of the metathorax of an insect

metapræscutal (met'-a-præ-skū'tal), *a.* [*< metapræscutum + -al*] Of or pertaining to the metapræscutum

metapræscutum (met'-a-præ-skū'tum), *n.* pl *metapræscutula* (-tā) [*< NL. < Gr. μετά, behind, + NL. præscutum, q. v.*] In *entom.*, the præscutum of the metanotum, the præscutal sclerite of the metathorax

metapsyche (met-ap-sī'kē), *n.* [*< Gr. μετά, behind, + ψυχή, soul see Psyche*] Haeckel's name for the hind-brain or cerebellar segment of the encephalon, the metencephalon or ependecephalon

metapsychosis (me-tap-sī-kō'sis), *n.* pl *metapsychoses* (-sēz) [*< Gr. μεταψυχωσις, a transference of soul from one body to another, < μετά, over, + ψυχή, a giving of life or spirit see psychosis*] The supposed action of one mind upon another without any known physical means of communication, or its effect. See *psychosis* and *telepathy*

It would be a grave retardation of science were it assumed that this strange metapsychosis was a medical curiosity alone
Proc. Soc. Psych. Research, III, 422

metapterygial (me-tap-te-ryj'-i-al), *a.* [*< metapterygium + -al*] Of or pertaining to the metapterygium as, metapterygial basalia

metapterygium (me-tap-te-ryj'-i-um), *n.* pl *metapterygia* (-ā) [*< NL. (Huxley, 1871), < Gr. μετά, behind, + NL. pterygium, q. v.*] The hindmost of several basal cartilages which the pterygium of a fish, as an elasmobranch, may present. See *pterygium*

metapterygoid (met-ap-ter'i-goid), *a.* and *n.* [*< Gr. μετά, after, + E. pterygoid*] I. *a.* Coming after or situated behind the true pterygoid

II. *n.* A metapterygoid bone

metaptosis (met-ap-tō'sis), *n.* [*< Gr. μετά, πτώσις, a change, < μεταπίπτειν, change, < μετά, over, + πίπτειν, fall, > πτῶσις, a falling*] In *logic*, the change of a proposition from being false to being true, or the reverse

metarabin (me-tar'-ā-bin), *n.* [*< Gr. μετά, beyond, + E. arabin*] The gum of cherry-plum, and almond-trees. Its chemical relations are not yet determined

metargon (me-tar'gon), *n.* [*< Gr. μετά, beyond, + argon*] An elementary substance obtained, in a gaseous form, by the volatilization of the white solid which remains after liquid argon has boiled away

Metarrhipha (met-a-rīp'tē), *n.* pl [*< NL. < Gr. μεταρρίπτην, turn over, turn about, < μετά, over, + ρίπτειν, throw*] An order of accephalous or conchiferous mollusks founded upon the family *Tridacnida*. In these gigantic bivalves the body is apparently turned half way round, whence the name. There is a subcentral adductor muscle, and the foot protrudes in front of the beak or umbo of the shell. *Gill*

metarrhiphosus (met-a-rīp'tus), *a.* Of or pertaining to the *Metarrhipha*, or having their characters

metascuta, *n.* Plural of *metascutum*

metascutal (met-a-skū'tal), *a.* [*< metascutum + -al*] Of or pertaining to the metascutum

metascutellar (met-a-skū'tel-ār), *a.* [*< metascutellum + -ar*] Of or pertaining to the metascutellum

metascutellum (met'-a-skū'tel'-um), *n.* pl *metascutella* (-ā) [*< NL. < Gr. μετά, beyond, + NL. scutellum, q. v.*] In *entom.*, the scutellum of the metanotum, the scutellar sclerite of the metathorax

metascutum (met-a-skū'tum), *n.* pl *metascutula* (-tā) [*< NL. < Gr. μετά, beyond, + NL. scutum, q. v.*] In *entom.*, the scutum or second division of the metanotum. The name is principally used in descriptions of *Hymenoptera*, *Diptera*, and *Neuroptera*, in which the metascutum generally forms an oblique or vertical surface behind the wings and above the insertion of the abdomen

metasilicate (met-a-sil'-i-kāt), *n.* [*< metasilicic + -ate*] A salt of the hypothetical metasilicic acid H_2SiO_3 often called in mineralogy a bisilicate as, calcium metasilicate (the mineral wollastonite, $CaSiO_3$ or $CaO \cdot SiO_2$)

metasilicic (met-a-sil'-i-kik), *a.* [*< Gr. μετά, with, + E. silicic*] A word used only in the phrase *metasilicic acid*. See *metasilicate*

metasoma (met-a-so'mā), *n.* pl *metasomata* (-mā-tā) [*< NL. see metasoma*] Same as *metasom*

metasomatic (met'-a-so-mat'-ik), *a.* [*< metasoma (-soma-) + -ic*] 1 Of or pertaining to the metasome of a cephalopod — 2 Pertaining to or resulting from metasomatism as, *metasomatic rocks*

metasomatism (met-a-so'mā-tizm), *n.* [*< metasomat(-ism) + -ism*] Same as *metasomatosis*

metasomatosis (met-a-so'mā-tō'sis), *n.* [*< Gr. μετά, over, + σῶμα (σώματ-), body*] In *lithol.*, a term used by a few writers on chemical geology with various shades of meaning, but chiefly in propounding certain theories of the transformation of one rock into another of a very different kind (as of limestone into granite), changes recognized as possible by but few geologists. See *metamorphism*

Although the crystalline rocks have been supposed to be occasionally the subject of wide spread *metasomatosis*, we may properly restrict the title of a general metasomatic hypothesis to that which seeks to explain the derivation of the principal crystalline silicated rocks from limestones.

T. S. Hunt, Min. Physiology and Physiography, p. 106

metasome (met'-a-sōm), *n.* [*< NL. metasoma, < Gr. μετά, after, + σῶμα, body*] The posterior part of the body of a cephalopod, which is enveloped in the mantle and contains the viscera. The name is also given to the posterior part of the body of bivalve mollusks behind the mesosome and the foot, containing the posterior adductor muscle

metastannate (met-a-stan'tat), *n.* [*< metastannum + -ate*] A salt of metastannic acid

metastannic (met-a-stan'tik), *a.* [*< Gr. μετά, beyond, + E. stannic*] An epithet applied to the hydrate or acid produced by digesting tin in nitric acid. It is isomeric with stannic acid, but quite different in its properties

metastasis (me-tas'tā-sis), *n.* [*< NL. < Gr. μεταστασις, a removal, change, departure, < μετα, put in another place, change, remove, < μετά, over, + ιστάω, place see stasis*] 1 Change of substance, conversion of one substance into another

He considers what not unfrequently happens in distended bodies by the metastasis of the morbid matter
Boyle, Works, II, 197

2 In *pathol.*, the production of local disease in some part of the body from a focus of more or less similar disease in some other part not immediately adjacent — 3 In *bot.*, metabolism

metastatic (met-a-stat'-ik), *a.* [*< metastasis (-at-) + -ic*] Of or pertaining to metastasis, characterized by or consisting in metastasis

Those *metastatic* changes which take place in the ordinary growth of plants or the storing of reserve material
Deasy, Botany, p. 186

metastatically (met-a-stat'-i-kal-i), *adv.* By metastasis

metasternal (met-a-stér-nal), *a.* [*< metasternum + -al*] In *entom.*, metathoracic and sternal or ventral, as a sclerite of an insect's thorax, of or pertaining to the metasternum — **Metasternal epimera** and **episterna**, the side pieces of the metathorax, adjoining the sternum — **Metasternal pores**, minute openings at the sides of the metasternum found in certain beetles of the family *Cerambycidae*. They exude a musky odor produced by scent organs within the body. Also called *acrid pores*

metasternum (met-a-stér-num), *n.* pl *metasterna* (-nā) [*< Gr. μετά, behind, + στήνιον, breast*] NL *sternum, q. v.* 1 In *anat.*, the hindmost segment or last sternite of the breast-bone, the xiphisternum, in man represented by the *xiphoid cartilage* or *ensiform appendage* — 2 In *entom.*, the sternite of the metathorax, the median part of the postpectus

metasthenic (met-a-stēn'-ik), *a.* [*< Gr. μετά, behind, + σθένος, strength, might*] Strong in the hinder parts, having the strength or weight of organization behind the middle of the body, as a kangaroo

metastibnite (met-a-stīb'nit), *n.* [*< Gr. μετά, along with, + E. stibnite*] Antimony trisulphide, occurring as an amorphous reddish coating upon siliceous sinters at the Steamboat Springs, Washoe county, Nevada

metastoma (me-tas'tō-mā), *n.* pl *metastomata* (met-a-stō'mā-tā) [*< NL. < Gr. μετά, behind,*

+ *στίμα*, mouth.] In *Crustacea*, a median development, often bifid, of the ventral part of a somite immediately behind the mouth. It is the so-called labium or under lip, composed of small pieces immediately below or behind the mouth. Also called *hypostoma*. See the quotation, and cut under *cephalothorax*.

On each side of and behind, the mouth [of the crawfish] are two little elongated oval calcified plates, between which an oval process, setae at its extremity, proceeds downward and forward, and lies in close apposition with the posterior face of the mandible of its side. This is one half of what is termed by most authors the labium, but, to avoid confusion with the labium of Insecta, from which it is wholly different, it may be called the *metastoma*. Huxley, *Anat. Invert.*, p. 272

metatarsal (met-a-tār'sal), *a* and *n* [*< metatarsus + -al*] *I. a* Of or pertaining to the metatarsus, or to one of the bones that form it

II. n One of the bones of the metatarsus. They are not more than five in number, reckoned as first, etc., from the inner to the outer side of the foot. When there are fewer than five, it is always the lateral metatarsals which have disappeared, so that an animal with three metatarsals has lost the first and fifth. In one with a single metatarsal the third or middle one remains. Metatarsals may ankylose together, as two do in the metatarsus of the ox, and three in that of any recent bird. In the latter case the compound bone is further complicated by fusion with it of tarsal elements, constituting a tarsometatarsus (which see). See cut at *metatarsus*—*Accessory metatarsal*, in *ornith.* See *metatarsus*, 1

metatarsale (met-a-tār-sā'lō), *n*; *pl metatarsalia* (-lī-ā). [*NL.* see *metatarsal*] A bone of the metatarsus, one of the metatarsals

metatarsalgia (met-a-tār-sal'jī-ā), *n* [*NL.* *< metatarsus + Gr ἄλγος*, pain] In *pathol.*, pain in the metatarsus. *Lancet*, No 3423, p. 707.

metatarses (met-a-tār's), *n* [*< NL metatarsus, q. v.*] The metatarsus

metatarsi, *n* Plural of *metatarsus*

metatarsodigital (met-a-tār-sō-dij'i-tal), *a* [*< NL metatarsus + I. digitus*, finger, + *-al*] Same as *metatarsophalangeal*

metatarsophalangeal (met-a-tār'sō-fā-lan'jō-āl), *a* [*< NL metatarsus + phalangeus + -al*] Of or pertaining to the metatarsus and to the phalangeus, as, a *metatarsophalangeal* articulation or ligament.

metatarsus (met-a-tār'sus), *n*, *pl metatarsi* (-sī) [*NL.* *< Gr. μέτα*, beyond, + *ταρσός*, in mod. sense 'tarsus' see *tarsus*] 1 The middle segment of the three of which the foot, or third division of the hind limb, consists, considered with special reference to its bony structure. It is the part of the foot between the tarsus and the toes, in man corresponding closely with the instep, and composed of five bones. (See cut under *foot*)

In a horse it is the part of the hind leg between the hock and the fetlock and has but one functional bone. In birds it is the part popularly called the *shank*, and in descriptive ornithology known as the *tarsus*. In most birds the metatarsus is naked and scaly, and extends from the bases of the toes to the sursty or first joint above. It usually consists of a single stout bone, representing three metatarsals fused together, and further complicated by the fusion of distal tarsal elements with its proximal end. In birds with four toes the metatarsus includes a small separate bone known as the *accessory metatarsal*, which is the metatarsal bone of the hallux or hind toe, the metatarsal hallux.

2 In *entom.* (a) The first one of the joints of the tarsus, when it is large or otherwise distinguished from the rest, which are then called collectively the *dactylus*. Also called *planta*, in which case the other joints are collectively known as the *digitus*. The peculiarly expanded and bristly metatarsus or planta of bees is known as the *scopula*. (b) With some authors, the hind foot, the entire tarsus of each hind leg, each of the third pair of tarsi. When this nomenclature is used, the tarsus of the middle leg is called *mesotarsus* and that of the fore leg *protarsus*. (c) The sixth joint of a spider's leg, between the first of the two which form the foot.—*Flexor metatarsal*. Same as *peroneus tertius* (which see, under *peroneus*).

1 root of Left Tarsus (Tarsometatarsus) of Pinguin (*Aptenodytes longirostris*) natural size
a articular facet for inner condyle of tibia
b articular facet for outer condyle of tibia
c two foramina showing incomplete fusion of three metatarsals
d point of attachment of accessory metatarsal, a, 3, 4 articular facets for second, third, and fourth toes

metatarctic (met'a-tār-tar'ik), *a*. [*< Gr. μετά*, with, + *E tartaric*] A word used only in the following phrase.—*Metatarctic acid*, an amorphous form of ordinary tartaric acid, prepared by keeping it for some time at its melting temperature.

metatatic (met-a-tat'ik), *a*. [*< Gr μετά*, with, + *τάσις* ('*vari-*'), tension, intensity, force, *< τάρσις*, verbal adj. of *τενέω*, stretch. see *tend.*] Relating to a coincidence of directions of stress and strain.—*Metatatic isotropy, plane*, etc. See the nouns.—*Orthogonal or principal metatatic axes*. See *axes*.

metatatically (met-a-tat'i-kal-i), *adv* In a metatatic manner or sense

metatela (met-a-tē'lā), *n*; *pl metatelas* (-lēs) [*NL.* *< Gr μετά*, behind, + *NL. tela*, q. v.] The tela of the metencephalon, the inferior choroid tela, in man, a very delicate tissue of the brain, more commonly called *tela medullare posterior*. See *tela, volum*. Wilder and Gage.

Metatheria (met-a-thē'ri-ā), *n. pl* [*NL.* *< Gr μέτα*, between, + *θηρίον*, a wild beast] A subclass of *Mammalia* including the existing *Marsupialia* and their hypothetical extinct ancestors, as well as other mammals intermediate between marsupials and placental mammals. The marsupials are the only known examples, the term being thus equivalent to *Didelphia*. It is correlated with *Prototheria* and *Eutheria*.

metatherian (met-a-thē'ri-an), *a* and *n. I. a* Pertaining to the *Metatheria*, or having their characters as, a *metatherian* mammal, the *metatherian* type

II. n A member of the *Metatheria*

metathesis (me-tath'e-sis), *n* [*LL.* *< Gr μετάθεσις*, transposition, *metathesis*, *< μετάθεσις*, put over, transpose, *< μετά*, over, + *τίθεσις*, put see *thesis*] 1 In *gram.*, transposition, more especially of the letters, sounds, or syllables of a word, as in the case of Anglo-Saxon *æcean*, *æscian*, English *ax*, *ask*, Anglo-Saxon *brud*, English *bird*

The transposition of vowels and liquids—*metathesis*—is an ordinary and familiar phenomenon of language. J. Hadley, *Essays*, p. 150

2 In *surg.*, a change in place of a morbid substance, an operation removing a morbid agent from one part to another, as in couching for cataract.—3 In *logic*, same as *conversion*

metathetic (met-a-thet'ik), *a* [*< metathesis* (-thet-) + *-ic*] Of the nature of or containing metathesis

metathetical (met-a-thet'i-kal), *a* [*< metathetic + -al*] Same as *metathetic*

metathoracic (met-a-thō-ras'ik), *a* [*< metathorax + -ic*] Of or pertaining to the metathorax of an insect.—*Metathoracic case*, the metathoracotheca.—*Metathoracic legs*, the third pair of legs of any hexapod, the hind legs.—*Metathoracic wings*, the posterior or lower wings.

metathoracotheca (met-a-thō-ra-kō-thē'kū), *n*, *pl metathoracothecæ* (-sē). [*NL.* *< metathorax + theca*, a case] In *entom.*, the metathoracic case, or that part of the integument of a pupa covering the metathorax. It is generally indistinguishable in the *Lepidoptera* and *Diptera*.

metathorax (met-a-thō'raks), *n* [*NL.* *< Gr μέτα*, beyond, + *θώραξ*, the chest] In *entom.*, the third and last segment of the thorax, succeeding the mesothorax, preceding the abdomen, and bearing the third pair of legs and the second pair of wings.—*Declivity of the metathorax*. See *decivity*.

metatome (met'a-tōm), *n* [*< Gr μέτα*, among, + *τομή*, a cutting, *< τέμνω*, *ταίνω*, cut] In *arch.*, the space between two dentils. (*Gull*)

metaxin (me-tak'sin), *n* [*< Gr μετὰξιν*, between (*< μέτα*, between, + *-in*)] A distinct proteid substance entering into the composition of the fibrillar structure of chloroplastids

metaxite (me-tak'sit), *n*. [*< Gr μετὰξιν*, between, + *-itē*] In *mineral.*, a variety of serpentine occurring in fibrous or columnar forms with a silky luster

metayage (me-tā'yāz; F pron mā-tā-yāzh'), *n* [*< F metayage*, as *metay(er)* + *-age*] The cultivation of land on shares, the metayer system of agriculture

Metayage—that is to say, a kind of temporary partnership or joint venture, in which the proprietor supplies the

land and the *metayer* and the peasants do all the work with their own horses and implements.

D. M. Wallace, *Russia*, p. 519

metayer (me-tā'yēr; F pron mā-tā-yā'), *n*. [*< F. metayer*, *< ML. mediatarus*, one who tills land for half the produce, *< L. mediata* (-tā), middle place, half. see *mosity*, *medosity*.] A cultivator who tills a farm or piece of ground for the owner, on condition of receiving a share of the produce, generally a half, the owner generally furnishing the whole or a part of the stock, tools, etc. This system of cultivation, called *metayage* or the *metayer system*, prevails in the central and southern parts of France and in most of Italy, and is practised to a considerable extent in the southern United States.

The principle of the *metayer system* is that the labourer or peasant makes his engagement directly with the land owner, and pays, not a fixed rent, either in money or in kind, but a certain proportion of the produce, or rather of what remains of the produce after deducting what is considered necessary to keep up the stock. The proportion is usually, as the name imports, one half, but in several districts in Italy it is two-thirds. Respecting the supply of stock, the custom varies from place to place, in some places the landlord furnishes the whole, in others half, in others some particular part, as for instance the cattle and seed, the labourer providing the implements.

J. S. Mill, *Pol. Econ.*, II viii § 1

The *metayer* has less motive to exertion than the peasant proprietor since only half the fruits of his industry, instead of the whole, are his own.

J. S. Mill, *Pol. Econ.*, II viii § 2

metaynt, *n* A Middle English form of *mitten*

Metazoa (met-a-zō'ā), *n. pl* [*NL.* *pl of metazoon*, q. v.] All those animals which are above the *Protozoa*, and which in the course of their development undergo certain metamorphoses, consisting of the primary segmentation of a true egg or ovum, and the subsequent passage through an embryonic condition in which they possess at least two distinct germinal layers, animals exhibiting cellular differentiation. The *Metazoa* are distinguished from the *Protozoa* in that the substance of the body is differentiated into histogenic elements—that is to say, into cells. In all the *Metazoa* the ovum has the form of a nucleated cell, the first step in the process of development being the production of a blastoderm by the subdivision of that cell, the cells of the blastoderm giving rise in turn to two layers of cells, endoderm and ectoderm, between which, in most cases, a mesoderm appears, to be itself split in two layers, such a four layered germ developing finally all the histological elements of the adult body. With the exception of certain parasites, and the extremely modified males of a few species, all these animals possess a permanent alimentary cavity lined by a special layer of endodermal cells. Sexual reproduction is the rule, and very generally the male element has the form of filiform spermatozoa. The lowest term in the series of the *Metazoa* is represented by the *Forifera* or sponges. Those of the *Metazoa* which possess a notochord, and in the adult state have the trunk divided into segments or myotomes, constitute the subkingdom *Vertebrata*, the rest are the several subkingdoms of invertebrates. Compare *Protozoa*. See *Mesozoa*, and cuts under *Gastrulation*.

Meteoric astronomy, that branch of science which treats of meteors and meteoroids in their astronomical relations. — **Meteoric iron** *see iron* and *meteorite*. — **Meteoric ring**, a swarm of meteoroids more or less thickly scattered along the entire orbit in which they circulate about the sun or other central body, so as to form a ring around it. The rings of Saturn are probably thus constituted. — **Meteoric showers**, showers of meteors or shooting stars occurring periodically, and especially in the months of August and November. The maximum brilliancy occurs every thirty-three years, and then sometimes for four years in succession there are showers of unusual magnitude. They are now known to be connected with comets — **Meteoric stones**, *see meteorite* —

meteorite (mē-tē-ōr-it), *n*. [*< meteor + -ite*] A mineral or metallic mass of extraterrestrial origin, or which, to use the common expression, has "fallen from the heavens." Bodies of this kind were formerly often called *aerolites*, but *meteorite* is now their generally accepted name among scientific men. The fall of meteorites upon the earth is a by no means infrequent occurrence, and records of such events date back to many centuries before the present era. Traditions point to the very early use of meteoric iron for the manufacture of weapons, and it is also known that meteorites were not infrequently the objects of worship in various parts of the world. In spite of this, the fall of rocks or metals from the heavens seemed to be so improbable an event that full credence was not given by scientific men to stories of such occurrences until about the beginning of the present century, when several falls having taken place (at Barbotan, France, 1790; Siena, 1794; World Cottage, Yorkshire, Eng., 1795; Balis, France, 1798; Benares, 1798; L'Aigle, France, 1803), the details of some of which were thoroughly investigated, a further denial of their genuineness became impossible. From the time of the fall at L'Aigle all doubt in the matter was abandoned. There are now several collections of meteorites, each of which contains specimens of between 300 and 400 different falls, and the whole number known is not far from 400 although it is by no means the case with all these occurrences that the specimens were seen to fall. Many of them have been found on the earth's surface but have been recognized as being extraterrestrial by their peculiar appearance and composition. The most important facts with regard to meteorites may be concisely stated as follows. They have not been found to contain any element not known to occur on the earth; they have furnished no evidence of the existence of life on the body or bodies of which they originally formed a part; they bear no indications of having been formed in the presence of water, or of the existence of water beyond the earth's atmosphere. In the regions from which they came they do exhibit abundant evidence of having had what geologists would call an "igneous origin," they are never granitic in character, but resemble very closely certain volcanic rocks of not infrequent occurrence. With this difference, that in the case of the meteorites the iron is associated with the silicate combinations exists in the metallic form, while in the terrestrial volcanic rocks it is with rare exceptions, oxidized. Furthermore, meteorites almost without exception, show a certain family resemblance, so that it is necessary to admit either that they all originally formed a part of one celestial body, or else that, having come from various members of the solar system, or from other systems, these have a wonderful resemblance to each other and to the earth itself. The most obvious division of meteorites is into *metallic* and *stony*, but the passage from one class to the other is by no means abrupt one. All metallic meteorites agree in that the predominating metal is iron, with which nickel is almost invariably associated; indeed, it has not been proved that there is any meteoric iron entirely free from that metal. With the nickel cobalt is almost always found, as is the case in terrestrial combinations. Tin and copper are also frequently found in meteorites in small quantity. The precious metals have not been detected in them. Meteorites composed almost entirely of metallic (nickeliferous) iron, forming a nearly homogeneous mass, have been denominated *siderolites*. These, however, almost always contain irregular nodular masses of pyrrhotite, schreibersite (phosphure of iron and nickel), either one or both, and occasionally of graphite. In a large proportion of the meteorites iron etching the polished surface with an acid develops the so-called "Widmannstätten figures." The development of these figures on the polished surface of a mass of iron found upon the earth's surface, and in regard to the time of whose fall nothing was known was formerly considered to be sufficient evidence of the celestial origin of such a mass, especially if, in addition, the presence of nickel could be shown by chemical analysis. While most of the metallic masses thus referred have almost certainly been correctly classed among the meteorites, there may be cases in which such reference has not been justifiable, since it is now known that all celestial irons do not give the Widmannstätten figures, while the iron found in large quantity and over a wide area associated with and embedded in basalt, near Övifak in Greenland, contains nickel, and gives, when etched, figures which have generally been considered as Widmannstätten, although others have denied that they could properly be so denominated. The terrestrial origin of the Övifak iron is, however, now generally

admitted, although for a considerable time after its discovery this was not the case. The wide extent of the area over which this iron occurs, and its peculiarly intimate association with the minerals of which the basalt is made up, forbid the idea that the metal could have fallen from above into lava in process of eruption, which was at first the favorite theory of its origin. Next in order to the siderolites come the *pallasites*, so named from the fact that a large meteorite of this class was in 1772 discovered in Siberia by the distinguished traveler Pallas. Under the name of *pallasites* are comprehended those meteorites which consist of a spongy or vesicular mass of iron, the cavities of which are in most cases partly or entirely filled with olivine, with which various other minerals are frequently associated, enstatite and bronzite being the most common, while chromite is of not infrequent occurrence. Both siderolites and pallasites belong to the class of metallic meteorites. By far the larger part of the stony meteorites are included under the designation of *chondrites*. In these the iron is distributed in fine particles through a more or less intimate mixture of silicates, with which chromite and magnetic pyrites are frequently associated, the silicates being chiefly olivine and bronzite. The name *chondrite* has reference to the fact that in this class of meteorites the material of which they are composed occurs in the form of rounded grains (*chondri*). The chondritic meteorites have however, a quite varied structure, in some few cases passing into a breccia, they have been divided into numerous subgroups in accordance with these structural variations. Most of the stony meteorites contain iron disseminated through their mass in grains or nodules, but there are a few which are destitute of such metallic particles. There are also a few stony meteorites which do not exhibit any traces of a chondritic structure, the minerals of which they are made up do not, however, differ very essentially from those occurring in the chondrites. There are also a few very anomalous meteorites which contain carbonaceous matter associated with the stony chondritic material. This carbon is not graphitic, but is combined with hydrogen and oxygen in product resembling to a certain extent that resulting from the decay of organic matter, but no traces of vegetable tissue have been discovered in these carbonaceous meteorites, which are only five or six in number. One or two interesting facts remain to be mentioned. The first is that since the phenomena of meteorites began to be observed and studied there have been extremely few falls of metallic meteorites. Of all the meteoric falls in the various collections, those of Hraschina in Austria (1751), of Dickson county Tennessee (1856), of Braunau in Bohemia (1847), and a few others (in all probably about nine), are the only ones positively known to have fallen, all the others are considered meteoric on account of their peculiar appearance and chemical composition. The observed falls of stony meteorites, on the other hand, are numerous. Another remarkable fact is that all the meteorites which are known to have fallen are of infinitesimally small size as compared with the earth. In the fall of L'Aigle some 2,000 to 3,000 stones were estimated to have reached the earth and of these the largest weighed only seven or eight pounds. The largest meteorites of which the fall was observed are that of Ensisheim (1492), which weighed about 280 pounds, that of Juvinas (1821), 242 pounds, and that of Emmett county, Iowa (1879), when a considerable number of stones fell, the largest of them weighing 47 pounds. Some masses of iron believed to be meteoric, the date of whose fall is unknown, are much larger than this, but still utterly insignificant in size, not only as compared with the earth or its satellite but even with the smallest celestial body of which anything is definitely known, namely the outer satellite of Mars, which has been estimated at from five to twenty miles in diameter. The mass of iron on the river Ben de go in Brazil has been variously estimated at from seven to ten tons in weight, that of Tucuman (Campo del Cielo) is said to weigh fifty tons. The Santa Caterina iron appears to be still larger having been estimated at twenty five tons, but doubts have been expressed as to whether this is really of celestial origin. Neumann's lines, structural lines described by J. G. Neumann as occurring in the Braunau meteorite.

Burke, Letter to a Noble Lord

2. That which measures, or is used for measuring; specifically, an instrument that records or indicates automatically the quantity, force, or pressure of a fluid passing through it or actuating it used in composition, as in *gas-meter*, *water-meter* (see these words), or alone when the fluid to be measured, as gas or water, is understood — 3 In *fishery*, one of the two reinforcing ropes of a seine or gill-net, of which one is attached to the upper edge and carries the floats, and the other to the lower edge and bears the weights or sinkers — *Dry meter*, a gas-meter employing a bellows-like apparatus and no liquid — *Electric meter* See *electric*. — *Electromagnetic-control meters*, electrical measuring instruments (such as ampere- or volt-meters) the indications of which are controlled by the magnetic field produced by an electromagnet. In current instruments the electromagnet is usually excited by the current to be measured — *Grain-meter*, any one of a variety of automatic grain-measuring machines, by which a stream of grain flowing from a chute or hopper is received, and the quantity discharged is indicated. Most of these grain meters are automatic weighing machines, the standard weight of a bushel of the grain being the unit of the scale of measurement or, if the indications are in pounds, the latter divided by the weight of a bushel at once gives the delivery in bushels. — *Magnetic-control meters*, electromagnetic-control meters with permanent magnets substituted for electromagnets. — *Spring-control meters*, electrical measuring instruments in which

the indications are controlled by the elastic resistance of a spring (See also *ampere-meter*, *coulomb-meter*, *joule-meter*, *volt-meter*)

meter¹ (mē'tēr), *v. t.* [*< meter*¹, *n.*] To measure by means of a meter, test by the use of a meter

It was found that the real proportions of air and gas were not determinable, except by *metering* both

The sense of a measure of length is recent, from the *F*, but in comp. *diameter*, *perimeter*, etc., the lit. sense 'measure' is common. see *meter*³ and *meter*¹] 1 (a) Rhythm in language, rhythmic language as measurable by prosodic times or uttered syllables, more specifically, arrangement of language in a succession of rhythmic movements, readily appreciable as such by the ear, verse, as opposed to prose. Meter in this sense is the subject-matter of the science of metrics. (b) Measured verse or rhythmic language, rhythmic language as determined by or divided into fixed measures. (1) A measure foot, or dipody. See *metre*. [Rare.] (2) A line, verse, or period in ancient metrics specifically, a monocolic verse or a dactylic (or trochaic) period as opposed to a hypermetron. Meters are called *monometers*, *dimeters*, *trimeters*, etc., according to the number of measures in a verse also *acatalectic*, *catalectic*, *brachycatalectic*, etc., *metra*, according to the completeness or incompleteness of the feet or measures. (3) A kind of verse, a particular variety of poetic rhythm, as expressed by the kind of feet of which the verse consists as iambic, dactylic, ionic, *meter*, a particular form of metrical composition as, *Alcaic meter*, *elegiac meter*. In ancient metrics meters were called *monod*, *pure*, or *simple meters* when they consisted of one kind of foot through out, *compound* or *epanaphthetic meters* when composed of cola of different kinds of feet, *mixed meters* when uniting different kinds of feet within the same colon

Milton, P. I., Pref

Metre may be defined to be a succession of poetical feet arranged in regular order, according to certain types recognized as standards, in verses of a determinate length
G. P. Marsh, *Lects on Eng Lang*, xxv

2. In *music*, the division of a composition into parts of equal time-value and of similar essential rhythmic structure. The smallest part thus indicated is that between successive primary accents and is called a *measure*. In printed music this is marked by a bar before each primary accent. But meter includes also, in a general way, the division of a piece into equal and similar parts of more than one measure, such parts being called *phrases* or *strophes*. In this sense musical meter has obvious analogies with meter in verse, though the analogies cannot always be pressed with safety especially as the nomenclature is not strictly parallel (See *metre*², 2.) *Rhythm* may be distinguished from meter in that it deals primarily with the accents and the typical and actual acentual patterns, which meter gathers into groups and sections in accordance with their time value. This distinction, however, is not always observed or even acknowledged. Sometimes the meaning of the term is reversed, rhythm being made a matter of time, and meter one of accent. Sometimes, too, the two terms are made entirely interchangeable

3. In *Eng hymnology*, a pattern of versification, including the structure of the prosodial feet used, the grouping of those feet into lines, and the grouping of lines into stanzas or strophes, popularly called *verses*. See foot and *versification*. According to the kind of feet used, meters are usually either iambic, trochaic, or dactylic. The principal iambic meters are *Common Meter* (C M), having alternately eight and six syllables to the line, *Long Meter* (L M), having eight syllables to the line, *Long Meter* (L M), having two lines of six syllables, followed by one of eight, and then by another of six. Each of these meters has properly four lines to the stanza, so that their syllabic scheme is as follows: C M, 8, 6, 8, 6; L M, 8, 8, 8, 8; L M, 6, 6, 6, 6. Each of them may also be doubled, so as to make eight-lined stanzas, the meter then being called *Common Meter Double* (C M D), *Long Meter Double* (L M D), or *Short Meter Double* (S M D). Long meter may also have six lines to the stanza, and is then called *Long Meter*, *Six Lines*, or *Long Particular Meter* (L P M) with the syllabic scheme 8, 8, 6, 8, 8. Other meters of this class are *Common Particular Meter* (C P M), 8, 8, 6, 8, 6, *Short Particular Meter* (S P M), 6, 6, 8, 6, 6, 8, *Hallelujah Me-*

ter (H M), 6, 6, 6, 6, 8 (or 6, 6, 6, 6, 4, 4, 4, 4), *Sevens* and *Sixes*, 7, 6, 7, 6, *Tens*, 10, 10, 10, 10, etc. The principal trochaic meters are *Sevens*, 7, 7, 7, 7, *Eights* and *Sixes*, 8, 7, 8, 7, *Sixes*, 6, 6, 6, 6, *Sixes and Fives*, 6, 5, 6, 5, etc. The principal dactylic meters are *Elevens*, 11, 11, 11, 11, *Elevens and Tens*, 11, 10, 11, 10, etc. Numerous modifications of these schemes occur, especially in recent hymns. — *Accentual meters* See *accentual*. — *Hippocratic meter*, *Hymeneal meter*, *ionic meter*. meter³, **metre**² (mē'tēr), *n.* [Also sometimes, as *metre* F, *metre* = *Sp Pg It metro* (after F), *< F metrie* = *D G Sw Dan meter*, *< L metrum*, *< Gr μέτρον*, a measure. see *meter*²] The fundamental unit of length of the French metrical system. It is the distance, at the melting-temperature of ice, between the ends of a certain platinum bar preserved in Paris and called the *metre des Archives*. It was intended to be one ten millionth part of the earth's meridian quadrant and to be 443 200 lines of the toise of Paris, from which it really differs by a very small amount. The meter is equal to 39 370 971 in. according to Professor Rogers, and to 39 369 866 in. according to General Comstock. A new meter has been established by the principal nations, which is defined by the length at the melting point of ice between two lines drawn on a bar of platinum, which is to be kept at the International Bureau of Weights and Measures at the *palais de Breteuil* near Sèvres, France. This new meter is to be as nearly as possible of the same length as the old one. Abbreviated *m*

meterage (mē'tēr-āj), *n.* [*< meter*¹ + *-age*] 1 The act of measuring — 2 Measurement, the result of measuring. — 3 A charge for measuring

Bible of 1551, Ezek xl 6

meter-prover (mē'tēr-prō'vēr), *n.* A registering holder, or a gas-tank of known capacity, used for testing the accuracy of gas-meters.

meter-wheel (mē'tēr-hwēl), *n.* A drum or hollow wheel with several chambers, to which air or other gas is admitted through a tube in the axle. In use, the wheel is immersed in water above its axis, and the gas, filling each chamber successively, causes the chamber filled to rise and the wheel to revolve, when the gas is discharged above the level of the water by an opening. The chambers are of known capacity, and the revolutions of the wheel are recorded on dials. Such wheels are used in gas meters, in which the pressure of the gas flowing through the meter gives the driving power

meteselt, *n.* [ME, *< AS met*, meat, + *sēl*, time] Dinner-time. Halliwell

metesthetic (met-es-thet'ik), *a.* [Also *met-aesthetic*, *< Gr μετά*, after, + *αισθητικός*, verbal adj of *αἰσθάνωμαι*, perceive. see *archaesthetu*] Pertaining to the hypothesis of metesthetism.

methal (meth'al), *n* [< *meth(y)* + *al(cohol)*] Same as *methylic alcohol* (which see, under *alcohol*)

methane (meth'an), *n* [< *meth(y)* + *-ane*] A hydrocarbon (CH₄) belonging to the paraffin series, a colorless, odorless gas which may be reduced to a liquid by extreme pressure and cold. It is innocuous when breathed in moderate quantity. It burns with a slightly luminous flame, and when mixed with seven or eight volumes of air explodes violently. It occurs in nature in the emanations of volcanoes and petroleum wells. It also occurs in large quantity in the coal measures, and when mixed with air constitutes the dreaded fire-damp of the miners. Also called *marsh gas*

methanometer (meth-ā-nom'e-ter), *n* [< *meth-ane* + Gr. *μέτρον*, measure] An apparatus, devised by Monnier, to determine and indicate automatically the quantity of marsh-gas (methane) in coal-mines. It depends upon the change of level of the mercury in a manometer tube in which carbon dioxide is formed by the combination of the gas with the oxygen of the air under the action, for example, of an electric spark

Orderly regulation of conduct with a view to the attainment of an end; systematic procedure subservient to the pur-

pose of any business; the use of a complete set of rules for carrying out any plan or project: as, to observe *method* in business or study; without *method* success is improbable in this and the next two senses only in the singular.

Though this be madness, yet there is *method* in 't.
Shak, *Hamlet*, II, 2, 308.

Horace still charms with graceful negligence,
And without *method* talks us into sense
Pope, *Essay on Criticism*, l 654

The particular uses of *method* are various but the general one is, to enable men to understand the things that are the subjects of it

Bentham, *Introductio* to *Morals and Legislation*, xvi, 1, note
Where the habit of *Method* is present and effective, things the most remote and diverse in time, place, and outward circumstance are brought into mental contiguity and succession, the more striking as the less expected
Coleridge, *Method*, § II (*Encyclopaedia*)

2. A system, or complete set, of rules of procedure for attaining a given end, a short way to a desired result; specifically, in *logic*, a general plan for setting forth any branch of knowledge whatever, that branch of logic which teaches how to arrange thoughts for investigation or exposition

Method hath been placed, and that not amiss, in logic, as a part of judgment the doctrine of *method* containeth the rules of judgment upon that which is to be delivered
Bacon, *Advancement of Learning*, II

Method is procedure according to principles.
Kant, *Critique of Pure Reason* (tr. by Meiklejohn), p 510
3. Any way or manner of conducting any business.

In this *method* of life it was once his fate to approach a clear fountain
Bacon, *Moral Fablia*, III

4. A plan or system of conduct or action, the way or mode of doing or effecting something as, a *method* of instruction, *method* of classification, the English *method* of pronunciation

Therefore to know what more thou art than man,
Another *method* I must now begin
Milton, P. R., IV, 540

Let such persons not quarrel with the Great Physician of souls for having cured them by easy and gentle *methods*
South, *Sermons*, IX, 1

Still less respectable appears this extreme concern for those of our own blood which goes along with utter unconcern for those of other blood, when we observe its *methods*
II Spencer, *Man vs State*, p 71

5. In *music* (a) Manner of performance, technique, style (b) A manner or system of teaching (c) An instruction-book, systematically arranged — *Acroasmatic*, *analytic*, *antecedental*, *method*. See the adjectives — *Arbogast's method*. [Named after the inventor, the Alsatian mathematician Louis François Antoine Arbogast, 1759-1808, who himself named it the *calculus of derivations*] A method for the development of the function of a function according to the powers of the variable of the latter function — *Baconian method*. See *Baconian* — *Catechetical method*, the method of teaching by questions addressed to the memory — *Centrobatic method*. See *dialogic* — *Differential method* (a) A method of estimating the value of a physical quantity by comparing it with another of the same kind the value of which is known and estimating the difference. See *differential*, and *differential galvanometer* (b) A method introduced by Frischon, in duplex telegraphy for eliminating the effect of the transmitted current on the instruments at the transmitting station while leaving them available to record any message received at the same time. See *telegraphy* — *Epidermic, erotematic, Eulerian, exoscopic, expectant method*. See the adjectives — *Euler's method of elimination*. See *elimination* — *Genetic, graphical, historical method*. See the adjectives — *Horner's method of approximation*. See *approximation* — *Idiopathic method*. Same as *epidermic method* — *Inductive or experimental method*, a method which depends upon making new observations. — *Introspective method*. See *introspective* — *Lagrangean, lunar, magistral method*. See the adjectives. — *Mance's method*, a method of measuring the electrical resistance of a circuit in which there is an electromotive force. See *resistance* — *Metaphysical or subjective method*, one which rests on the assumption that the possibilities of thought are coextensive with the possibilities of things — *Method of adhesions*. See the quotation

At the recent meeting of the British Association, Dr E B Tylor read an interesting paper on the laws of marriage and descent, illustrative of his ingenious method of studying ethnological phenomena. All myths and customs, on a close study, may by analysis be disintegrated, and are found to consist of certain elements. Dr Tylor arranges these elements statistically, and, by inquiring which occur simultaneously among various peoples, proves that certain groups of such elements belong genetically together. This he calls the *method of adhesions*.

Method of agreement, that method of experimental inquiry in which, some experiment being tried under a great variety of circumstances and found always to yield the same result, it is inferred that this result would be reached under all circumstances. — **Method of approaches**. See *approach*. — **Method of avoidance**, a method of experimentation in which the circumstances

of the observation are specially chosen so that one usual source of error does not enter into the result. — **Method of compensation**, a method in which a source of error of unknown amount is got rid of by a special mechanical contrivance. — **Method of concomitant variations**, the method in which the known quantities on which the results of an experiment depend are made to vary with a view to ascertaining the values of the unknown quantities. — **Method of correction**, a method of experimentation in which a source of error is allowed for by calculation. This differs from the method of residues only in that the nature of the causes of the residual phenomena are known, and only their quantities remain to be determined. — **Method of difference**, that method in which an experiment is tried under conditions seeming to differ in but one material circumstance, and the difference in the two results is ascribed to that circumstance. — **Method of dimensions**, *divisors*, *exclusions*, *functions*. See *dimension*, *divisor*, etc. — **Method of exhaustion**, the method of approximation to the area of a curvilinear figure by means of inscribed and circumscribed polygons. — **Method of increments**, of *indivisibles*, of *infusion*, of *limits*. See *increment*, *indivisible*, etc. — **Method of least squares**. See *square* — **Method of residues**. (a) That method of experimental inquiry in which from an observed quantity is subtracted the effects of known causes in order that the effects of unknown causes may be studied by themselves (b) A method invented by Cauchy of treating the integral calculus. See *residual* — **Method of reversal**, a method in which two experiments are made under different circumstances, in such a way that their results can be combined by calculation, so that the error shall be determined and eliminated. — **Natural method**, a method in which the order of nature is observed. See *Jeuneau*. — **Null-method**, a method of measurement in which the equality of two physical quantities is indicated when, on performing a specified operation, no effect is produced on the testing apparatus for example, the Wheatstone bridge method of measuring electrical resistance. — **Progressive method**. Same as *synthetic method* — **Regressive or resolute method**. Same as *analytic method* — **Scientific method**, a method of investigation proceeding in a scientific manner, and setting out from fundamental and elementary principles, especially, the method of modern science. — **Socratic method, the method of teaching by questions addressed to the understanding. — **Subjective method**. Same as *metaphysical method* — **Symbolic method**. (a) A method in which symbols of operations are treated as if they were symbols of quantities. (b) A method in which, in *analytical geom*, the functions which vanish on straight lines, etc. are represented by single letters (c) In *algebra*, a method in which, by the aid of umbræ, quantities are written as powers of polynomials — **Synthetic, progressive, or compositive method**, a method in which we set out with general principles and proceed to deduce their consequences. — **Tabular or tabellary method**, the method of exhibiting the divisions of a subject by tables. — **Total method**, the method of a whole science, *partial method*, the method of a particular part of a science. — **Universal or general method**, a method applicable to all problems, or to a very wide class of problems, *special or particular method*, one applicable to a small class of problems**

Its members place especial emphasis upon the doctrines of entire sanctification and eternal punishment. They rigidly enforce the rule for simplicity of dress, and prohibit the use of choir or musical instrument in church service, they have abandoned episcopacy, and have one superintendent elected every four years.

II. *a.* Of or pertaining to Methodism or the Methodists, belonging to or agreeing with the general body of Methodists. *as, Methodist principles; a Methodist church.* — **The Methodist Church**, a Christian body existing in several distinct church organizations, the most important of which are that known in England as the *Wesleyan* and that known in the United States as the *Methodist Episcopal Church*. These two bodies do not differ materially in doctrine, worship, or ecclesiastical organization. They are evangelical, and Arminian in theology. Their worship is generally non liturgical. Each Methodist society, or local church, is organized in classes, under class leaders, the different societies which are sometimes grouped in circuits, are combined in districts, each of which is, in the United States, under the superintendence of a presiding elder. The American churches also have bishops, who are not diocesan, but itinerant, possessing concurrent jurisdiction over the whole church. The highest ecclesiastical court is the General Conference which meets every fourth year. In the United States lay delegates have been admitted to the Conference since 1872, and in England since 1880, before which dates the Conference was a purely clerical body. Other Methodist churches are the *Welsh Calvinistic Methodists* Calvinistic in theology, formed from the *Countess of Huntingdon's Connection*, which is Congregational in polity, the *Methodist New Connection*, which gives a larger degree of power to the laity than does the Old Connection, the *Bible Christians*, the *Primitive Methodists*, the *United Methodist Free Churches*, a combination of three preexisting Methodist organizations, and the *Wesleyan Reform Union*. All the above are British organizations. In the United States, the Methodist Episcopal Church exists in two distinct organizations, the *Methodist Episcopal Church*, and the *Methodist Episcopal Church (South)*. There is also an *African Methodist Episcopal Church*, an *African Methodist Episcopal Zion Church*, the *Colored Methodist Episcopal Church in America*, the *Union American Methodist Episcopal Church* — all composed entirely of colored Methodists, the *Evangelical Association*, popularly though inaccurately termed *German Methodist*, or *Albrights*, from the name of their founder, the *United Brethren in Christ*, which is essentially though not nominally a Methodist body, the *Methodist Protestant Church*, which rejects episcopacy, and the *Wesleyan Methodist Connection of America*. In Canada several of the Methodist bodies have been consolidated into a single organization, called the *Methodist Church of Canada*. All these Methodist bodies agree in having a consolidated ministry for each body, each minister being subject to change of parish within certain definite periods. This feature of their economy is called "the itinerancy."

methodistic (meth-'d-ist-ik), *a.* [*< methodist + -ic.*] 1. Of or pertaining to methodism or methodists, characterized by or exhibiting strict adherence to method, hence, strict or exacting, as in religion or morals.

Then spare our stage, ye *methodistic* men!
Byron, Hints from Horace.

2. [*cap.*] Of or pertaining to the Methodist Church; characteristic of the Methodists or Methodism. *as, Methodistic principles or practices.*

In connection with the *Methodistic* revival.
Is Taylor, Wesley and Methodism, p. 106.

Methodistical (meth-'d-ist-ik-al), *a.* [*< methodistic + -al.*] Same as *Methodistic*, 2.

[plate Compared, p. xii.]

methodistically (meth-'d-ist-ik-al-i), *adv.* In a methodistic manner; specifically [*cap.*], after the manner of the Methodists; as regards Methodism.

methodization (meth-'d-iz-'shon), *n.* [*< methodize + -ation.*] The act or process of methodizing or reducing to method, the state of being methodized. Also spelled *methodisation*.

The conceptions, then, which we employ for the colligation and *methodization* of facts do not develop themselves from within, but are impressed upon the mind from without. *J. S. Mill, Logic, IV. ii. § 2.*

methodize (meth-'d-iz-, *v.*, pret. and pp. *methodized*, ppr. *methodizing* [*< method + -ize.*] I. *trans.* To reduce to method; dispose in due order, arrange in a convenient manner.

The wisdom of God hath *methodized* the course of things unto the best advantage of goodness.

Sir T. Browne, Christ Mor., i. 80.

Science is simply common sense rectified, extended, and *methodized*. *J. P. M., Cosmic Philos., i. 124.*

II. *intrans.* To be methodical; use method. The mind is disposed to generalize and *methodize* to excess. *Coleridge, Method, § 1.*

Also spelled *methodise*.
methodizer (meth-'d-iz-er), *n.* One who methodizes. Also spelled *methodiser*.

He was a careful *methodizer* of his knowledge.
Souther, Noah Webster, p. 216.

methodological (meth-'d-ol-'og-i-kal), *a.* [*< methodolog- + -ic-al.*] Of or pertaining to methodology.

If there were several competing methods of geometry geometers would inevitably be involved at the outset of their study in *methodological* discussion.
II. S. S. S., Methods of Ethics, p. 5.

methodologist (meth-'d-ol-'og-ist), *n.* [*< methodolog- + -ist.*] One who is versed in or treats of methodology.

methodology (meth-'d-ol-'og-i), *n.* [*< Gr. $\mu\epsilon\theta\omicron\delta\omicron\varsigma$, method, + $\lambda\omicron\gamma\omicron\varsigma$, $\lambda\omicron\gamma\omicron\varsigma$, speak see -ology.] 1 A branch of logic whose office it is to show how the abstract principles of the science are to be applied to the production of knowledge, the doctrine of definition and division, in a broader sense, the science of method in scientific procedure.*

That part of logic which is conversant with the perfection, with the well being of thought is the doctrine of method — *methodology*.

Sir W. Hamilton, Lectures on Logic, xxiv.

The rival originators of modern *Methodology*, Descartes and Bacon, vie with each other in the stress that they lay on this point and the latter's warning against the "no notions male terminata" of ordinary thought is peculiarly needed in ethical discussion.

methomania (meth-'d-ol-'og-i), *n.* [*NL., < Gr. $\mu\epsilon\theta\omicron\varsigma$, $\mu\epsilon\theta\omicron\varsigma$, strong drunk (see *metad*), + $\mu\alpha\upsilon\iota\alpha$, madness.] In *pathol.*, an irresistible morbid craving for intoxicating substances, dipsomania.*

Dipsomania is a form of physical disease, and it has been aptly defined as an uncontrollable and intermittent impulse to take alcoholic stimulants, or any other agent which causes intoxication — in short, a *methomania*.
E. C. Mann, Psychol. Med., p. 354.

methought (mē-'thāt'), Pretent of *methinks*.

methridatum. *n.* See *methridatum*.

methule (meth-'ul), *n.* Same as *methyle*.

methy (meth-'i), *n.*, pl. *methies* (-iz). A name of the burbot.

methyl (meth-'il), *n.* [*< Gr. $\mu\epsilon\theta\omicron\varsigma$, mead, + $\nu\eta$, wood.] The hypothetical radical (CH_3) of wood-spirit and its derivatives. It is analogous to ethyl in its chemical relations. — **Methyl alcohol**, **green, mercaptan**. See *alcohol* etc.
methylal (meth-'il-al), *n.* [*< methyl + al(c)hol.*] Methylene dimethyl ether, $\text{CH}_2(\text{OCH}_3)_2$, a liquid product of the oxidation of methylic alcohol. It has a pleasant odor, and by oxidation passes into formic acid.*

methylamine (meth-'il-am-in), *n.* [*< methyl + amine.*] A colorless gas (NH_2CH_3), having a strong ammoniacal odor, and resembling ammonia in many of its reactions. It may be regarded as ammonia (NH_3) in which the radical methyl (CH_3) has been substituted for a hydrogen atom. When brought in contact with a lighted taper it burns with a livid yellowish flame. Methylamine may be condensed to a liquid, it has not been solidified. It is exceedingly soluble in water, and forms, with acids, crystallizable salts.

methylate (meth-'il-lāt), *v. t.*; pret. and pp. *methylated*, ppr. *methylating* [*< methyl + -ate.*]

To mix or impregnate with methylic alcohol or methyl. — **Methylated spirit**, spirit of wine or alcohol containing ten per cent. of wood naphtha (methylic alcohol). The naphtha communicates a disagreeable flavor, which renders the spirit unfit for drinking. It is of much use in the arts as a solvent, for preserving specimens, in the manufacture of varnishes, for burning in spirit lamps, etc.

methyl-blue (meth-'il-blū), *n.* A coal-tar color prepared by treating spirit-blue (see *spirit-blue*, 2) with methyl chloride. It is used to dye light-blue tints on silk, and possesses a purer tone than spirit-blue.

methylconine (meth-'il-kō-nin), *n.* [*< methyl + conine.*] One of the alkaloids found in commercial conine.

methylcrotonic (meth-'il-krō-ton-'ik), *a.* In *chem.*, used only in the following phrase — **Methylcrotonic acid**. Same as *crovadic acid* (which see, under *crovadic*).

methylene (meth-'il-lēn), *n.* [*< methyl + -ene.*] A bivalent hydrocarbon radical (CH_2) which does not exist free, but occurs in many compounds, as methylene iodide, ($\text{C}_2\text{H}_2\text{I}_2$). Also called *methene*.

methylene-blue (meth-'il-lēn-blū), *n.* A coal-tar color prepared by treating dimethylaniline successively with hydrochloric acid, sodium nitrate, sulphurated hydrogen, common salt, and zinc chloride. It is used in dyeing, and produces fast blues on cotton, leather, and jute, but not on wool or silk. It is also an important bacterioscopic reagent.

methylic (mē-'thil-'ik), *a.* [*< methyl + -ic.*] Containing or related to the radical methyl. — **Methylic alcohol**, **ether**, etc. See the nouns.

methyl-salicylic (meth-'il-sal-'il-'ik), *a.* Containing methyl in combination with salicylic acid. — **Methyl-salicylic acid**, the methyl ester of salicylic acid, and the chief ingredient of wintergreen oil, from *Gaultheria procumbens*, a colorless, agreeably smelling oil which forms salts that are easily decomposed.

methyl-violet (meth-'il-vī-'ō-let), *n.* A coal-tar color produced by the direct oxidation of pure dimethylaniline with chlorid of copper. Also called *Purix violet*.

methymnion (meth-'im-'m-on), *n.*, pl. *methymnia* (-ē). [*NL., < Gr. $\mu\epsilon\theta\omicron\mu\eta\iota\alpha$, $\mu\epsilon\theta\omicron\mu\eta\iota\alpha$, after, + $\eta\mu\eta\iota\alpha$, hymn.] In *anc. pros.*, a short colon after an antistrophe.*

methysis (meth-'is), *n.* [*NL., < (Gr. $\mu\epsilon\theta\omicron\varsigma$, drunkenness, < $\mu\epsilon\theta\omicron\varsigma$, to be drunken with wine.)]*

In *pathol.*, drunkenness, intoxication.
metic (met-'ik), *n.* [*Irreg. for *metec, < L. $metecus$, < (Gr. $\mu\epsilon\tau\alpha\kappa\omicron\varsigma$, a resident alien, prop. adj., changing one's abode, < $\mu\epsilon\tau\alpha$, over (denoting change), + $\alpha\lambda\omicron\varsigma$, house, abode see *conomy*.)]*

An emigrant or immigrant; specifically, in ancient Greece, a resident alien who in general bore the burdens of a citizen, and had some of the citizen's privileges, hence, any resident alien.

To all men, rich and poor citizens and *metics*, the comparative excellence of the democracy was now manifest.
Grote Hist. Greece, VI. 2.

The Patricians, as distinguished from the Patres, formed an aristocracy as compared with their freedmen or other dependents, or with the *metics* or strangers that sojourned among them, or with the alien population that were permitted, on terms more or less hard, to cultivate their lands.
W. E. Hearn, Aryan Household, p. 192.

meticulous (mē-'tik-'ū-lus), *a.* [= *F. $meticuleux$, < L. $meticulosus$, full of fear, < $metus$, fear.] Timid, over-careful.*

Melancholy and *meticulous* heads. *Sir T. Browne.*
A stylist of Plato a super subtle and *meticulous* consists toney. *Amer. Jour. Philol., IX. 290.*

meticulously (mē-'tik-'ū-lus-lī), *adv.* Timidly.

metric³ (met'rik), *a* [*<* *F.* *étrique* (= *Sp.* *étrico* = *Pg.* *It.* *metrico* (after *F.*), < *NL.* *metricus*, pertaining to the system based on the meter, < *metrum*, a meter see *metre*³, and of *metric*¹, *metric*².] Pertaining to that system of weights and measures of which the meter is the fundamental unit—**Metric system**, the system of measurement of which the meter is the fundamental unit. First adopted in France (definitely in 1790), it is in general use in most other civilized countries, except the English speaking countries, and is now almost universally adopted for scientific measurements. Its use is permitted in Great Britain, and was legalized in the United States in 1866. The meter, the unit of length, was intended to be one ten millionth part of the earth's meridian quadrant, and is so very nearly. Its length is 39 370 inches. (See *metre*³.) The unit of surface is the *are*, which is 100 square meters. The theoretical unit of volume is the *stere*, which is a cubic meter. The unit of volume for the purposes of the market is the *liter*, which is the volume of 1 kilogram of distilled water at its maximum density, and is therefore intended to be 1 cubic decimeter. For 10 times, 100 times, 1,000 times, and 10,000 times one of the above units, the prefixes *deca*, *hecto*, *kilo*, and *myria* are used. For $\frac{1}{10}$, $\frac{1}{100}$, $\frac{1}{1000}$ of the respective units, *deci*, *centi*, and *milli* are prefixed. The micron adopted by the international commission, is one millionth of a meter. The following is a complete table of equivalents

1 myriameter	= 54 nautical miles, or 6.21 statute miles
1 kilometer	= 0.621 statute mile, or nearly $\frac{5}{8}$ mile
1 hectometer	= 109.4 yards
1 decimeter	= 0.497 chain, or 1.988 rods
1 meter	= 39.37 inches, or nearly 3 feet 3½ inches
1 decimeter	= 3.937 inches
1 centimeter	= 0.3937 inch
1 millimeter	= 0.03937 inch, or 1/25.4 inch
1 micron	= 1/25,400 inch
1 hectare	= 2.471 acres
1 are	= 119.6 square yards
1 centiare (or square meter)	= 10.764 square feet
1 decastere	= 13 cubic yards, or about 2½ cords
1 stere (or cubic meter)	= 1.307 cubic yards, or 35.3 cubic feet
1 decistere	= 3½ cubic feet
1 kiloliter	= 1 tun 12 gallons 2 pints 2 gills old wine measure
1 hectoliter	= 22.01 imperial gallons, or 26.4 United States gallons
1 decaliter	= 2 gallons 1 pint 2½ gills imperial measure, or 2 gallons 2 quarts 1 pint ½ gill United States measure
1 liter	= 1 pint 3 gills imperial, or 1 quart ½ gill United States measure
1 deciliter	= 0.704 gill imperial, or 0.845 gill United States measure
1 milliliter	= 2,204.6 pounds avoirdupois
1 metric quintal	= 2 hundredweight less 3½ pounds, or 220 pounds 7 ounces
1 kilogram	= 2 pounds 3 ounces 4½ drams avoirdupois
1 hectogram	= 8 ounces 8½ drams avoirdupois
1 decagram	= 154.32 grains troy
1 gram	= 15.43234874 grains
1 decigram	= 1.5432 grains
1 centigram	= 0.15432 grain
1 milligram	= 0.015432 grain

Closely connected with the metric system was the proposed division of the right angle or circular quadrant into 100 equal parts instead of 90 degrees, but this has not met with favor, mainly because the name *degree* was retained introducing a risk of confusion. See *gram*²

metric¹ (met'riks), *n.* [*Pl. of metric¹ see -ics*] The philosophical and mathematical theory of measurement.

metric² (met'riks), *n.* [*Pl. of metric² see -ics*] 1. The art of versification. — 2. The science or doctrine which treats of rhythm in language and its employment in poetic composition. Both as an art and as a science metrics is a branch of rhythmic, and relates to rhythm in language as music or harmonics does to musical rhythm, and orchestrics (regarded as an art or science by the ancients) to rhythm in the movements of the body. It is a distinct science from grammar in its proper sense, the only department of which approaching metrics is that called *prosody* — that is, the study of quantity or the determination of long and short in spoken language. As a matter of convenience grammars have added to this elementary or empiric treatises on versification, and so in traditional and popular usage *prosody* is made equivalent to *metrics*. In metrical composition the unit is the time (mora) or the syllable. In the nomenclature of modern metrics syllables combine into feet or measures, these into lines, and lines into stanzas or strophes. In the more exact and complete terminology of ancient metrics times or syllables combine into feet or measures, measures into cola, lines (verses), or periods, periods into systems or strophes, strophes into pericopes, and lines, periods, systems, or pericopes into poems. Also *metric*.

metrometer² (met-rom'ō-ter), *n.* [*< Gr μντρη, the womb, + μετρον, measure*] Same as *hystero-meter*.

metronome (met'rō-nōm), *n.* [= F *metronome*, < Gr μντρον, a measure, + νόμος, law see *nome³*] A mechanical contrivance for marking time, especially as an aid in musical study or performance. In its usual form it consists of a double pendulum (oscillating on a pivot near its center), the lower end of which is weighted with a ball of lead, while the upper end carries a weight of brass that may be moved up or down. When the latter weight is moved up, the rate of oscillation is slower when it is moved down, the rate is faster. The upper end of the pendulum is graduated, so that any desired number of oscillations per minute can be secured. The whole is connected with clock work having a strong spring whereby the oscillation may be maintained for several minutes, and each oscillation may be marked by a distinct tick or click. The invention of the metronome was claimed by J N Maelzel in 1816, but it is probable that he only adapted and introduced it to general use. The instrument is used for recording the tempo desired by a composer, and also as a means of teaching beginners the habit of keeping strict time. Its use is indicated in printed music by the *metronomic mark* (which see, under *mark*). Sometimes an attachment is added for striking a bell at every second, third, fourth, or sixth oscillation, so as to mark primary accents. Such a metronome is called a *bell metronome*. Various other metronomes have been invented, most of which are based upon the pendulum principle. Abbreviated *M*.

Both *metropolitans* and colonists styled themselves Hellenes, and were recognized as such by each other.
Græce, Hist Greece, II 315

2. *Eccles* (a) In the early Christian church, the bishop of the municipal capital of a province or eparchy, who had a general ecclesiastical

tical superintendence over the bishops and churches of his province, confirmed, ordained, and when necessary excommunicated the bishops, and convened and presided over the provincial synods. The superiority in rank of the bishops of the principal sees was so early established that many authorities have held that the office of metropolitan (including also under this title the primates of patriarchal sees) was of apostolic origin. In the developed organization under the Christian emperors a metropolitan ranked above an ordinary bishop and below a patriarch or exarch. In medieval times the power of most of the metropolitans in western countries became much diminished, while that of the diocesan bishops and the pope was relatively increased. See *archbishop* and *primate*.

By consent of all churches, the precedence in each province was assigned to the Bishop of the Metropolis, who was called the first Bishop, the *Metropolitan*.

Harron, The Pope's Supremacy
The bishops (of Cyprus) were subjected to the Latin metropolitan, who was bound to administer justice among them. *Stubbs, Medieval and Modern Hist.*, p. 167.

(b) In modern usage, in the Roman Catholic and other episcopal churches, any archbishop who has bishops under his authority.

Metrosideros (mē-trō-si-dē-rōs), *n. pl.* [*< (Bentham and Hooker, 1865), < Metrodorus + -ως*]. A subtribe of plants of the natural order *Myrtaceae*, the myrtle family, typified by the genus *Metrosideros*. It is characterized by many free stamens, arranged in one or many series, or connate in clusters, opposite the petals, myrtle like or large and feathery veined leaves, and flowers almost always in corymbs or short racemes. It embraces 11 genera and about 60 species, which are found principally in Australia and New Caledonia.

Metrosideros (mē-trō-si-dē-rōs), *n.* [*< NL. (Banks, 1788), < Gr. μήτρα, the pith or heart of a tree, lit. womb, + σιδερος, iron see siderite*]. A

genus of plants of the natural order *Myrtaceae* and the tribe *Septospermeae*, type of the subtribe *Metrosideraceae*. They are trees or shrubs, some times climbers — a few climbing when young, and independent when old. The ovules are arranged in many series, and horizontal or ascending, the leaves are opposite and feathery-veined, the flowers are usually showy, prevailing red, strongly marked by their crown of very numerous long erect stamens, and borne in dense terminal three forked cymes. There are about 20 species, growing chiefly in the Pacific Islands, from New Zealand to the Sandwich Islands, one species each in tropical Australia, the Indian archipelago, and South Africa. *M. vera* is the iron tree of Java, and *M. robusta* the rata of New Zealand. Various species are known in cultivation. Nine fossil species of this genus have been described, chiefly from the European Tertiary, but one occurs in the Middle Cretaceous of Greenland.

metrotome (mē-trō-tōm), *n.* [*< Gr. μήτρα, womb, + τομή, cutting, < τέμνω, τέμνω, cut*]. In surg., an instrument used to divide the neck of the uterus.

Metroxylon (mē-trōk'si-lon), *n.* [*< NL. (Rottböll), < Gr. μήτρα, the pith or heart of a tree, + ξύλον, wood*]. A genus of palms, known to older writers as *Sagus* (Blume), of the tribe *Lepidocarpeae* and the subtribe *Calameae*. They bear fruit but once, and are characterized by robust stems and branching spikes. They are large trees with terminal suberect pinnately cut leaves having opposite linear-lanceolate segments, the spadix has a coriaceous prickly spathe. Seven species are known, indigenous in the Malay archipelago, New Guinea, and the Fiji Islands. *M. larni* and *M. Rumphii*, natives of Siam, the Malayan Islands, etc., are the proper sagu palms. The former grows from 2½ to 50 feet high and has a rather thick trunk, covered with leaf-scars, which bears a graceful crown of large pinnate leaves, from the center of which arise the pyramidal flower spikes. The latter is a much smaller tree, further distinguished by the sharp spines borne on its leaves and flower sheaths. These trees flower when about fifteen years old, and require nearly three years to ripen their fruit after which they die. (See *sago*.) *M. Rumphii* is a littoral tree which forms dense growths. *M. larni* grows in swamps. *M. amicarum*, a species in the Friendly Islands, yields seeds which serve as a vegetable ivory.

mettadel, *n.* [*< It. metadella, a liquid measure*]. A measure of wine, containing one quart and nearly half a pint, two of which make a flask.

mezuzah (me-zū'zā), n., pl. *mezuzoth* (-zoth)

[Heb.] Among the Jews, an emblem consisting of a piece of parchment, inscribed on one side with the words found in Deut. vi 4-9 and xi 13-21, on the other with "Shaddai," "the Al-

mighty," and so placed in a small hollow cylinder that the divine name is visible through an opening covered by a glass. This cylinder is affixed to the right-hand door-post in Jewish houses. The Jews believed that the mezuzah had the virtue of an amulet in protecting a house from disease and evil spirits.

Every pious Jew, as often as he passes the mezuzah, in leaving the house or in entering it, touches the divine name with the finger of his right hand, puts it to his mouth, and kisses it, saying in Hebrew "The Lord shall preserve thy going out and thy coming in from this time forth, and even for evermore" (Ps. cxli 8)

Same as *quenes lace* (which see, under *lace*).—*Mezzo-soprano*, a voice or a voice part of a compass between those of the soprano and the alto, a low soprano, especially one with a larger, deeper natural quality than a true soprano—*Mezzo-soprano clef*, a C clef when placed on the second line of the staff—*Mezzo staccato*, moderately or half staccato—*Mezzo-tenore*, a voice or a voice-part of a compass between those of the tenor and the bass, a low tenor more usually called a *barytone*, though the latter is rather a high bass than a low tenor

mezzo-rilievo (med'zō-rē-lyū'vō), n. [It., < *mezzo*, middle, half, + *rilievo*, relief see *relief*.] 1 In *sculpt*, relief higher than bas-relief but lower than alto-rilievo, middle relief—2. A piece of sculpture in such relief

mezzotint (mez'ō- or med'zō-tint), n. [*F. It. mezzotinto*, < *mezzo*, middle, half, + *tinto* (< L. *tinctus*), painted, pp. of *tingere*, paint see *tint*, *tinge*.] A method of engraving on copper or steel of which the essential feature is the bur-

nishing and scraping away, to a variable extent, of a uniformly roughened surface consisting of minute incisions, accompanied by a bur, produced by an instrument called a *cradle* or *rocker*. This surface is left nearly undisturbed in the deepest shadows of the subject, but is partially removed in the middle tints, and completely in the highest lights. Thus treated, the plate when inked, prints impressions graded in light and shade according to the requirements of the design, from a rich velvety and perfectly uniform black up through every variation of tone to brilliant white, or showing, when desirable, the sharp contrast between the extremes.

This style of engraving, invented by Van Slegem, a Dutchman in 1641, though erroneously ascribed to his pupil Prince Rupert, has been pursued with much success in England. The defect of the process is that it does not admit of clear and sharp delineation of forms, hence in modern practice the outline of the design is strongly etched with acid before the cradle is used, and texture is often given to the finished plate by lines produced by dry point etching

This afternoon Prince Rupert showed me with his own hands a new way of engraving called *Mezzotinto*.
Keelyn, Diary, March 13, 1661

Mezzotint print, in *photog.*, a picture having some resemblance in texture, finish, or effect to a mezzotint engraving. See the quotation.

mho (mō), *n*. [*A* reversed form of *ohm*] A term proposed by Sir William Thomson for the unit of electrical conductivity. It is the conductivity of a body whose resistance is one ohm.
mhometer (mom'e-tēr), *n* [*< mho* + *Gr* *μητρον*, measure] An instrument for measuring electrical conductivities.

mi (mī), *n* [*It*, etc., orig taken from the first syllable of *L. mira* see *gamut*] In solmization, the syllable used for the third tone of the scale. In the scale of C this tone is E, which is therefore sometimes called *mi* in France, Italy, etc.—*Mi contra fa*, in medieval music, the interval of the tritone, "the devil in music," so named because it occurred between *mi* (B) of the "hard" hexachord and *fa* (F) of the "natural" hexachord see *hexachord* and *tritone*. Also called *mi contra fa*.

miana-bug (mi-an'ū-bug), *n* [*< Miana*, a town in Persia, + *E* *bug*] A kind of tick, *Argas persicus*, of the family *Ixodidae*, whose bite is very painful and said to be even fatal. See *Argas*.

miaouli (mi-ou'li), *n* [Malay (?)]. The volatile oil of *Melaleuca flayllora*. It closely resembles cajuput-oil.

miargyrite (mi-ār'jū-rīt), *n* [*< Gr* *μιαρ*, loss, + *ἀργυρος*, silver, + *-ite*] In mineral, a sulphide of antimony and silver, occurring in monoclinic crystals of an iron-black color with dark cherry-red streak.

miarolitic (mi-ar'ō-lit'ik), *a* [*< Gr* *μιαρός*, stained, impure, + *λίθος*, stone] A word introduced by Rosenbusch to designate the structure of rocks of the granitic family, where the magma in assuming a crystalline character has shrunk in dimensions so as to leave numerous small cavities, giving the mass a structure somewhat analogous to that commonly designated as *saccharoidal*, as in the case of metamorphic limestone, and also to that to which the name *drusy* is sometimes applied.

mias (mi'as), *n* [Malay] A native name of the orang-outang. The natives distinguish three kinds, *mias papayan*, *mias kamau*, and *mias romba* which are, however, not scientifically determined to be different from one another. A. R. Wallace.

miaskite, **miaskite** (mi-as'kit), *n* [*< Miask*, in Siberia, where the rock is found, + *-ite*] In petrology. See *clavite-syenite*.

miasm (mi'azm), *n* [*< F* *miasme* = Sp *Pg* *It* *masma*, *< NL* *masma*, *< Gr* *μασμα*, stain, pollution (cf. *μασμαιω*, stain), *< μαινω*, stain, dye, taint, pollute] Same as *miasma*.

Harvey, Consumptions.

miasma (mi-az'mā), *n*; pl *miasmata* (-ma-tā). [*NL*: see *miasm*.] The emanations or effluvia arising from the ground and floating in the atmosphere, considered to be infectious or otherwise injurious to health, noxious emanations, malaria. Also called *aerial poison*.

miasmal (mi-az'mal), *a* [*< masma* + *-al*] Containing miasma, miasmatic as, miasmal swamps.

miasmatic (mi-az-mat'ik), *a* [= *F* *miasmatic* = Sp *miasmático* = *Pg* *It* *miasmatico*, *< NL* *miasma* (-) see *miasm*] Pertaining to or of the nature of miasma, affected, caused by, or arising from noxious effluvia, malarious as, miasmatic exhalations, miasmatic diseases, a miasmatic region—**Miasmatic fever**. See *fever*.

miasmatical (mi-az-mat'ik-al), *a* [*< miasmatic* + *-al*] Same as *miasmatic*.

miasmaticist (mi-az'ma-tist), *n*. [*< miasma* (-) + *-ist*] One who is versed in the phenomena and nature of noxious exhalations, one who makes a special study of diseases arising from miasma.

miasmatus (mi-az'ma-tus), *a*. [*< miasma* (-) + *-ous*] Generating miasma as, stagnant and miasmatus pools.

miasology (mi-az-mol'ō-jī), *n* [*< Gr* *μιασμα* (see *miasma*) + *-λογία*, *< λέγω*, speak see *-ology*] A treatise on miasma, the science that treats of miasma. Imp. Inc.

miasmous (mi-az'mus), *a* [*< miasma* + *-ous*] Miasmatic, miasmatic.

The miasmata where swamps and woods cover cities and fields, and some herds of wild cattle and their half savage keepers are the only occupants of a fertile but miasmatic desert.
J. P. Mahaffy, Harper's Mag., LXVIII, 902.

Miastor (mi-as'tor), *n* [*NL*, *< Gr* *μιαστωρ*, a guilty wretch, also an avenger, *< μαινω*, stain, defile, pass into defilement see *miasm*] A remarkable genus of nemocerous dipterous insects of the family *Cecidomyiidae*, having moniliform eleven-jointed antennae, short two-jointed palpi, and the wings with three veins, the middle one of which does not reach the apex. *M. metroloas* is an example. This species reproduces asexually. The larvae, which are found under bark, develop within themselves other similar larvae, which again reproduce themselves, until this chain of asexual reproduction ends by the passing of the larva to the pupa state, from which sexual individuals arise to pair and lay eggs for a fresh generation in the usual way. Mehnert, 1864.

miau, miau (miou, miā), *v* *u*. Variant forms of *meow*. *Mousheu*.

miaul (mi-āl'), *v* [*= F* *mauler* see *meat*] To cry as a cat, meow.

mica (mi'ka), *n* [= *OF* (and *F.*) *mica* = *It* *mica*, *< L* *mica*, a crumb, grain, little bit. Hence ult *miche* and *mie* see *mie*] A crumb, a little bit. E. Phillips, 1706.

mica (mi'ka), *n* [= *F* *mica* = Sp *Pg* *mica*, a mineral, *< NL* *mica*, a glittering mineral (see *def*), *< L* *mica*, a crumb (cf. *mica*), prob applied to the mineral on the supposition that it was related to *L* *micare*, shue, glitter] 1 One of a group of minerals all of which are characterized by their very perfect basal cleavage, in consequence of which they can be separated easily into extremely thin, tough, and usually elastic laminae. They occur in crystals with a prismatic angle of 120°, but more commonly in crystalline aggregates, often of large plates, but sometimes of minute scales having a foliated structure the folia being generally parallel, but also concentric, wavy, and interwoven and also arranged in stellate or plumose and sometimes almost fibrous forms. In crystallization the micas belong to the monoclinic system, but they approximate very closely in form in part to the orthorhombic system (cf. *g.* *muscovite*), in part to the rhombohedral system (cf. *g.* *biotite*). The micas are silicates of aluminum with other bases as iron, calcium, magnesium, potassium, sodium, lithium. In some kinds fluorine is present in small amount. The prominent varieties are—*muscovite* or common potash mica, the light-colored mica of granite and similar rocks and *paragonite*, which is an analogous soda species, *biotite*, or magnesian mica (including moroxene and anomite, distinguished according to the position of the optic axial plane), the black or dark green mica of granite, hornblende rocks etc. *phlogopite*, the bronze colored species common in crystalline limestone and serpentine rocks *lepidomeane*, a black mica containing a large amount of iron, and *lepidolite*, the rose red or lilac lithia mica occurring commonly in aggregates of scales. (See further under these names.) The micas enter into the composition of many rocks, including the crystalline rocks both metamorphic and volcanic (as granite, gneiss, mica schist, trachyte, diorite, etc.), and sedimentary rocks (as shales and sandstones), sometimes giving them a laminated structure. In the sedimentary rocks they are in most cases derived from the disintegration of older crystalline rocks. Mica

(*muscovite*) is often used in thin transparent plates for spectacles to protect the eyes in various mechanical processes, in reflectors, instead of glass in places exposed to heat, as in head lights and stove- and lantern-lights, and even for windows in Russia (hence called *Muscovy glass*). Ground to powder, it is combined with varnish to make a glittering coating for wall papers, and is used also in preparing a covering for roofs, and as a packing and lubricator for machinery. It is often vulgarly called *gingham*. The so called *brittle micas* include a number of species, as margarite, sepyerite (clintonite), etc., which are related to the true micas, but are characterized by their brittle folia. 2. In the preparation of kaolin for use in the manufacture of porcelain, one of the second set of channels through which a mixture of water and suspended clay washed out by the water from the broken clay-bearing rock is slowly passed to obtain the deposition of flakes of mica and other foreign substances, and thus to purify the clay, which is finally allowed to subside in a series of pits or tanks. Each of the first set of channels through which the mixture is passed for the settling of the coarser flakes of mica, etc., is called a *drag*. This set of channels is collectively called the *drags*, and the second set the *micas*. See *porcelain* and *kaolin*.—**Copper mica**. Same as *chalcophyllite*.—**Lithia mica**. Same as *lepidolite*.—**Mica-powder**, *giant-powder* in which mica in fine scales takes the place of the silicious earth. Fowler, Mod. High Explosives, p. 253.

mica. A prefix frequently used in lithology when the rock in question contains more or less mica in addition to the other usual constituents. Thus, *mica-syenite*, a rock differing very little from ordinary syenite, *mica-trap*, nearly the same as *minette*, etc.

micaceous (mi-kā'she-us), *a*. [*< micaceous* + *calcareous*] In geol., containing mica and lime specifically noting a mica-schist containing carbonate of lime.

micaceous (mi-kā'she-us), *a* [= *F* *micaceo* = Sp *micáceo* = *Pg* *It* *micaceo*, *< NL* **micaceus*, *< mica*, mica see *mica*] 1 Pertaining to or containing mica, resembling mica or partaking of its properties, especially that of occurring in foliated masses consisting of separable laminae as, *micaceous* structure.—2 Figuratively, sparkling. Davies [Rare].

There is the Cyclopean stile of which Johnson is the great example, the sparkling or *micaceous* possessed by Hazlitt.
Southey, The Doctor, interchapter xxii.

Micaceous iron ore. See *iron*.—**Micaceous rocks**, rocks of which mica is the chief ingredient, as mica-slate and clay slate.—**Micaceous schist**, mica schist.

Micaria (mi-kā'ri-a), *n* Same as *Maclaria*.
mica-schist (mi'kā-shist'), *n* A rock made up of quartz and mica, with a more or less schistose or slaty structure. The relative proportion of the two minerals differs often very considerably even in the same mass of rock. The usual mica in a typical mica-schist is the species called *muscovite*; this however, is sometimes replaced to a certain extent by *biotite* or *paragonite*. Mica schist passes readily into talc schist and chlorite schist, and when feldspar is added to the other constituents of the rock it becomes gneiss. It is one of the most abundantly distributed of the so called crystalline or metamorphic rocks, and, with granite, gneiss, and the other members of the schist family, forms the main body of the rocks formerly designated as *primitive*.

mica-slate (mi'kā-slāt'), *n* The common name of the rock now usually designated by lithologists as *mica-schist*.

mice, *n* Plural of *mouse*.

mice-eyed (mīs'id), *a* Keen-eyed, sharp-sighted.

A legion of *mice-eyed* decipherers.

micella (mi-sel'ā), *n*; pl *micellar* (-ē) [*NL*, dim of *L. mica*, a crumb, grain see *mica*] 1 One of the hypothetical crystalloid bodies or plates supposed by Nägeli to be the units out of which organized bodies, more particularly plants, are built up. These micellae were supposed to be aggregates of larger or smaller numbers of chemical molecules, and were determined by the optical properties exhibited by cell-walls, starch grains, and various proteid crystalloids. From their optical properties it was concluded further that they were biaxial crystals, and they were assigned, as a probable form, that of parallelipipedal prisms with rectangular or rhomboid bases.

Crystalline doubly refracting particles or *micellae*, each consisting of numerous atoms and impermeable by water.

+ *masse, messe, mass*: see *masel*.] 1. A festival celebrated by the Roman Catholic Church, the Anglican, and some other churches on September 29th, in honor of the archangel Michael. The festival is called in full the *Festival or Feast of St. Michael and All Angels*. It appears to have originated in a local celebration or celebration, and seems to have already existed in the fifth century. The Greek Church dedicates November 8th to St. Michael, St. Gabriel, and All Angels, the Armenian and Coptic churches also observe this day.

Heywood, Woman Killed with Kindness

2. To be guilty of anything sly, skulking, or mean, such as carrying on an illicit amour, or pilfering in a sneaking way. See *micher*.

What made the Gods so often to trowant from Heauen,
and *mych* heere on earth, but beauty?
Lilly, Euphues and his England, p. 279

*miche*², *a* and *n*. A Middle English form of *muck*.

*miche*³, *n*. See *muck*.

michelt, *a* and *n*. See *mickle*.

Michelangelesque (mi-kel-an-jel-esk'), *a* [*Michelangelo* (see def.) + *-esque*]. Pertaining to Michelangelo Buonarroti (1475–1564), a famous Italian sculptor, painter, and architect, resembling the style of Michelangelo, or belonging to his school.

Michelangelism (mi-kel-an-jel-izm), *n*. [*Michelangelo* (see def.) + *-ism*]. The manner or tendencies in art of Michelangelo Buonarroti. See *Michelangelesque*.

It shuns the Scylla of nullity and bad taste only to fall into the Charybdis of *Michelangelism*.
C. C. Perkins, Italian Sculpture, p. 350

Michelia (mi-kē-lī-ā), *n*. [NL (Linnæus, 1737), named after *Micheli*, a Florentine botanist of the early part of the 18th century.] A genus of plants of the natural order *Magnoliaceae* and the tribe *Magnolieae*, characterized by introrse anthers, by having the cluster of pistils raised on a stalk, and by the many-seeded carpels. They are trees having much the appearance of magnolias, but with the flowers usually smaller and (with one exception) axillary, whereas magnolia-flowers are terminal. About 12 species are known, natives of tropical and mountainous Asia. The most noteworthy species are *M. excelsa*, the champ, and *M. champaca*, the champak, both valuable economically; the latter a sacred tree in India. See *champak* and *champak*.

Michellévyite (mē-shel-lev'i-īt), *n* [Named after M. Michel Lévy, a French mineralogist.] A mineral having the composition of barite, barium sulphate, and probably that species, but believed by the describer to belong to the monochlous system. It is found in a massive cleavable form occurring in a crystalline limestone near Perkins' Mill, Templeton, Province of Quebec, Canada.

michert, *n*. [Also *meecher*, *meacher*, < ME *mycher*, *mecher*, < *miche*¹ + *-er*.] One who skulks or sneaks; a truant, a mean thief.

Chyld, be thou lyer nother no theffe,
Be thou no *meecher* for mycheffe
Babees Book (E. E. T. S.), p. 401

Shall the blessed sun of heaven prove a *micher*, and eat blackberries?
Shak, I Hen IV, ii 4 450

michery (mich'-er-i), *n* [*ME. micherie*, < OF **micherie*, < *michier*, *mucher*, etc., hide, skulk see *miche*¹.] Theft; pilfering; cheating.

Nowe thou shalt full sore abile
That like stailthe of *micherie*
Gower, Conf. Amant, v

miching (mich'ing), *n*. [Also *meeching*, *meuching*, < ME *michyng*, verbal *n* of *miche*¹, *i*.] The act of skulking or sneaking, the act of pilfering or cheating.

For no man of his counsaile knoweth
What he maie gette of his *michyng*
Gower, Conf. Amant, v

Oph What means this, my lord?
Ham Marry, this is *miching* mallecho, it means mischief
Shak, Hamlet, iii 2 146

We never, in our whole school course, once played truant, but other boys did, and the process was freely talked of among us. We called it *miching*, pronouncing the *i* in *mich* long, as in *mile*.
P. H. Gosse, Longman's Mag.

miching (mich'ing), *p* *a* [Also *meeching*, *meuching*, ppr of *miche*¹, *v*.] Skulking, sneaking, dodging, pilfering, mean.

Sure she has some *meeching* rascal in her house
Beau and Fl., Scornful Lady, iv 1

With eating many a *miching* mouse
Herrick, His Grange, or Private Wealth

But I ain't o' the *meechin'* kind, that sets an' thinks for weeks
The bottom's out o' th' universe coz their own gillpot leaks
Lowell, Biglow Papers, 2d ser., p. 11

"How came the ship to run up a tailor's bill?" "Why, them's mine," said the cap'n, very *meeching*.
S. O. Jewett, Deephaven, p. 159

micken (mik'en), *n*. [Origin obscure.] The herb spiguel also called *Highland mucken*. See *Micum*² [Scotch].

mickle (mik'l), *a* and *n*. [I. *a* Also dual *mickle*, *meikle*, < ME *mikel*, *meikel*, *mukel*, *mykel* (also assimilated *michel*, *mechel*, *mukel*, *mochel*, > ult. Scott, Waverley, xviii
Let me laugh awhile I: *mickle* time to grieve
Keats, Eve of St. Agnes, xiv

II. *n* 1. Size, magnitude, bigness.

A wonder will I farynge knight,
Of gooder *muchel*, and ryght yonge therto
Chaucer, Death of Blanche, l 454

2. A great deal, a large quantity as, many. Little make a *mickle*.

mickle, *v* *t* [*ME. mikhlen*, *muklen*, *muchen*, also assimilated *muchelen*, < AS *michian*, *michian*, *meechan*, also *gmichian* (= OLG *mihhilōn* = Icel *mikla* = Goth *mikiljan*), become great, make great, magnify, < *mucel*, great see *mickle*, *a* Cf *much*, *v*.] To magnify.

mickleness (mik'l-ness), *n* [*ME. mikhleness*, < AS *mucelnes*, *mycelnes*, < *mucel*, great see *mickle* and *-ness*.] Bigness, great size.

After this ther com aponeth thame thane a grote multitude of swyne, that wait alle of a wonderfull *mekinesse*, with taskes of a cubitt lenth
MS. Lincoln A. 1 17, l 28 (*Hall's MS.*)

micky (mik'i), *n* pl *mickies* (-iz). [A dim of *Mike*, a familiar abbreviation of *Michael*, a favorite name among Irishmen, from that of St. Michael. Cf *Pat*, *Paddy*, similarly derived from the name of St. Patrick.] 1. An Irish boy [Slang, U.S.]—2. A young wild bull [Australian].

There were two or three *Mickies* and wild heifers, who determined to have their owner's heart's blood
A. C. Grant, Bush life in Queensland, I 227

mico (mē'kō), *n* [S. Amer.] 1. A small squirrel-like monkey of South America one of the marmosets or oustutis, of the genus *Hapale* or

Jacchus *H. argentatus* is white, with black tail and flesh-colored face and hands.—2. [*cap*.] A genus of marmosets based on this species.

Miconia (mi-kō'm-a), *n* [NL (Ruiz and Pavon, 1798), named after D. Micon, a Spanish botanist.] A large genus of South American plants of the natural order *Myrsinaceae* and type of the tribe *Miconieae*. It is characterized by terminal inflorescence, 4 or 4 parted flowers with obtuse petals and a calyx which has a cylindrical tube and usually a 4 to 8 lobed limb. They are trees or shrubs, with very variable foliage and white, rose colored, purple or yellowish flowers, which are small, and grow in terminal or very rarely lateral clusters. About 400 species have been enumerated all confined to tropical America. Quite a number are cultivated for ornament. They sometimes receive the name of *West Indian currant bush*.

Miconieae (mi-kō-mi'e-ē), *n* pl [NL (A. P. de Candolle, 1828), < *Miconia* + *-ae*.] A tribe of New World plants, belonging to the natural order *Myrsinaceae*, typified by the genus *Miconia*. It is characterized by a berry like or coriaceous fruit which breaks open irregularly by the leaves not being grooved between the primary nerves and by the anthers opening by one of two pores or slits with the connective usually having no appendages. The tribe includes 25 genera and nearly 1,000 species, all of which are indigenous to tropical America.

micostalis (mi-kos-tā'lis), *n*, pl *micostales* (-lēz). [NL (Wilder and Hugo), < F. *micostal* (Strauss-Ducckheim), supposed to stand for *microcostal*, < Gk *μικρός*, small, + L. *costa*, rib see *costal*.] A muscle of the fore leg of some animals, as the cat, corresponding to the human *teres minor*.

micrande (mik-ran'dér), *n* [*Gk. μικρός*, small, + *ανδρ* (*andros*), male.] A dwarf male plant produced by certain coniferoid algae. The antheridia which are peculiar zoospores produced non sexually in special cells of the parent plant fix themselves (after swimming) upon the female plant and produce these very small male plants.

Microastur (mik-ras'tér), *n* [NL, < Gk *μικρός*, small, + L. *astur*, a species of hawk see *Astur*.] A genus of hawks of the family *Falconidae* and subfamily *Accipitrinae*, established by G. R. Gray in 1841, having the tarsus reticulated behind and the nostrils circular with a centric tubercle. It is peculiar to America, the species ranging from southern Mexico to Bolivia and Peru.

Microathene (mik-ra-thē'nē), *n* [NL, < Gk *μικρός*, small, + *Ἀθήνη*, Athens see *Athen*.] A genus of *Strigidae* established by Coues in 1866, the elf-owls. It includes the most diminutive of owls, with small weak bill and feet, relatively long rounded wings, square tail with broad rufous tail feathers only above, the feet elsewhere covered with bristles and middle toe with claw as long as the tarsus. The type and only species is *M. velutina*, an insectivorous owl of arboreal habits found in the southwestern United States and parts of Mexico. It is only about six inches long. Also called *Microgallus*.

micraulic (mik-rā'lik), *a* [*NL. micraulicus*, < Gk *μικρον*, small, + NL *aula*, *aula* see *aula*, 2.] Having the *aula* small, specifically, of or pertaining to micraulic.

micraulica (mik-rā'li-kā), *n* pl [NL see *micraulic*.] Animals whose *aula* is small and whose cerebral hemispheres are vertically expanded. They are amphibians, dipnoans, reptiles, birds, and mammals. *Hilder*, Amer. Nat., Oct., 1887, p. 914.

Microembryae (mik-rem-brī'e-ē), *n* pl [NL (Bentham and Hooker, 1880), < Gk *μικρος*, small, + *ἔμβρυον*, a germ see *embryo*.] A series of dicotyledonous apetalous plants. It is characterized by an ovary consisting of a single carpel or of several united or distinct carpels, by the ovules being solitary or rarely several in each carpel, and by the seed having copious fleshy or starchy albumen and a very small embryo. It includes 4 orders (*Piperaceae*, *Chloranthaceae*, *Myrsinaceae*, and *Momsmiaceae*), 39 genera, and nearly 1,500 species.

micrencephalous (mik-ren-sēf'a-lus), *a* [*Gk. μικρός*, small, + *ἐνέφαλος*, the brain.] Small-brained, having a small brain.

micristology (mik-ris-tol'ō-jī), *n* [*Gk. μικρος*, small, + *ἱστολογία*.] The science which treats of the minutest organic fibers. *Thomas*, Med. Dict.

micro (mī'krō), *n* [*Gk. μικρο-*, as used in *Microcoptera* etc.] In *entom.*, any small insect. Thus *Microcoptera* are small beetles *Microdyptera* are small flies etc. and in familiar language, when the meaning is sufficiently determined by the connection such words are abbreviated to *micro*. When not so determined, *micro* always means one of the *Microlepidoptera*.

micro- (usually mī'krō but also, better, mik'rō) [*L.*, etc., *micron*, < Gk *μικρός*, also *μικρὸς*, small, little.] An element of Greek origin, meaning 'small, little', specifically, in *physics*, a prefix indicating a unit one millionth part of the unit it is prefixed to as, *microfarad*, *microhm*, etc.;

in *lithol.*, indicating that the structure designated is microscopic in character, or that it is so minutely developed as not to be recognized without the help of the microscope, *e. g.* *microgranitic*, *micropegmatic*, *microgranulitic*. See these words

micro-audiphone (mī-kro-ā'di-fōn), *n* [*<* Gr. *μικρός*, small, + *E audiphone*] An instrument for reinforcing or augmenting very feeble sounds so as to render them audible

Microbacterium (mī-kro-bak-tē'ri-um), *n* [*<* NL, *<* Gr. *μικρός*, small, + *βακτήριον*, a little stick see *bacterium*.] In some systems of classification, a tribe or division of *Schizomycetes*, containing the single genus *Bacterium*, and characterized by having elliptical or short cylindrical cells.

microbal (mī-kro-bal), *a* Same as *microbial*

But now we have antiseptics of the track and careful covering of the wound to guard against *microbial* invasion
Medical News, LII 506.

microbe (mī-kriōb), *n* [*<* F. *microbe* (C. Sedil- lot, 1878) (NL *microbion*), intended to mean 'a small living being,' but according to the formation 'short-lived' (of Gr. *μικρός*, small, + *βίος*, life)] A minute living being not distinguished, primarily, as to its animal or vegetable nature. The term is most frequently applied to various microscopic plants or their spores (particularly *Schizomycetes*), and further has come to be almost synonymous with *bacterium*. Taken in this latter sense, microbes are regarded as essentially polymorphous organisms, adapting themselves to varied conditions of existence, which in turn influence the form taken by them. For this reason their classification has often varied, since their distinction into genera and species does not yet rest on precise data.

Micrococcus prodigiosus

Micrococcus of Chicken Cholera

terium, *Vibrio*, *Spirillum*, and *Myxobolus* are the genera or form genera under which most of the forms are known. They are instrumental in the production of fermentation, decay, and many of the infectious diseases affecting man and the lower animals.

microbia, *n* Plural of *microbion*

microbial (mī-kro-bi-al), *a* [*<* *microbe* (microbion) + -al] Of or pertaining to microbes, caused by or due to microbes. Also *microbal*.

Leptothrix parvistica

There is a considerable difference found in the microbial richness of the air in different places in the country
Nineteenth Century, XXII 244

microbian (mī-kro-bi-an), *a* [*<* *microbe* (microbion) + -an] Microbial

His definition of pellagra is therefore this "a microbian malady, due to a poisoning produced by a pathogenic bacillus"
Lancet, No 3449, p 707

microbic (mī-kro-bik), *a* [*<* *microbe* + -ic] Microbial

The theory of the *microbic* causation of the disorder
Medical News, LII 376.

microbicide (mī-kriō-bi-sid), *n* [*<* NL *microbion*, *microbe*, + *L -cida*, a killer, *<* *cadere*, kill] A substance that kills microbes.

Sulphur is well known as a powerful *microbicide* long recommended in pulmonary diseases
Medical News, L 306.

microbiological (mī-kro-bi-ol-ō-jī-kal), *a* [*<* *microbiolog-y* + -ical] Of or pertaining to microbiology as, *microbiological* research.

Microbiological study of the lochia.
Medical News, XLVIII 147

microbiologist (mī-kro-bi-ol-ō-jist), *n* [*<* *microbiolog-y* + -ist] One who studies or is skilled in microbiology, one versed in the knowledge of minute organisms, as microbes.

Ideas which are just now very prominent in the minds of *microbiologists*
Science, V. 73.

microbiology (mī-kro-bi-ol-ō-jī), *n*. [*<* NL. *microbion*, *microbe*, + Gr. *-λογία*, *<* *λέγειν*, speak: see -ology] The science of micro-organisms; the study of microbes

There was great reason for creating in the Faculty of Sciences the chair of *microbiology*
Pop Sci. Mo, XXXIII 341.

microbion (mī-kro-bi-on), *n*, pl. *microbia* (-i). [*<* NL see *microbe*] Same as *microbe*

These [reports] by no means demonstrate that the active principle of cholera resides in a *microbion*, or that the particular *microbion* has been discovered
Science, IV 145

microcaltrops (mī-kro-kal'trops), *n* [*<* Gr. *μικρός*, small, + *E caltrop*] A sponge-spicule of minute size, having the form of a caltrop. Also *microcaltrops*. *W J. Sollas*, *Encyc Brit*, XXII 417

Microcamera (mī-kro-kam'e-rā), *n* pl [*<* NL, *<* Gr. *μικρός*, small, + *L camera*, chamber see *chamber*] 1 A subtribe of choriastidan sponges having the chambers small. opposed to *Macrocamera*. *Lendenfeld*, 1886 — 2. A tribe of ceratose sponges with small spherical ciliated chambers and opaque ground-substance. *Lendenfeld*

microcamerate (mī-kro-kam'e-rāt), *a* [*<* Gr. *μικρός*, small, + *L camera*, chamber see *chamber*.] Having small chambers, specifically, of or pertaining to the *Microcamera*, in either sense

Microcebus (mī-kro-sē'bus), *n* [*<* NL, *<* Gr. *μικρός*, small, + *κεβός*, a long-tailed monkey see *Cebus*] A genus of small prosimian quadrupeds of the family *Lemuridae* and subfamily *Galaginae*, containing such species as the pygmy lemur, *M. smithi*, and the mouse-lemur, *M. murinus*, the dwarf lemurs

Microcentri (mī-kro-sen'trī), *n* pl [*<* NL (Thomson, 1876), *<* Gr. *μικρός*, small, + *κέντρον*, point, spur see *center*] 1 One of two prime sections of the paramitic hymenopterous family *Chalcididae*, containing the seven subfamilies which have the tarsi three- or four-jointed (usually four-jointed, rarely heteromerous), anterior tibiae with a slender short straight spur, and antennae usually few-jointed. They are nearly all of small size

Microcephala (mī-kro-sēf'a-lā), *n* pl [*<* NL, neut. pl. of *microcephalus*, *<* Gr. *μικροκέφαλος*, small-headed see *microcephalous*] In Latreille's system, the fifth section of brachelytrous pentamerous *Coleoptera*. They have no evident neck, the head being received in the thorax as far as the eyes, the thorax is trapeziform, widening from before backward, the body is comparatively little elongated, the mandibles are of moderate size, and the elytra often covers more than half of the abdomen. The species live on flowers, fungi, and dung. Also *Microcephali*

microcephalia (mī-kro-sēf'a-li-ā), *n*. [*<* NL, *<* Gr. *μικροκέφαλος*, small-headed see *microcephalous*] Same as *microcephaly*

microcephalic (mī-kro-sēf'a-līk or -sēf'a-līk), *a* [*<* (As *microcephalous* + -ic)] Having an unusually small cranium. Specifically — (a) In *cranium*, having a cranium smaller than a certain standard. A capacity of 1,360 cubic centimeters is taken by some as the upper limit of microcephaly. (b) In *pathol.*, having a head small through disease or faulty development, producing idiocy more or less extreme

microcephalism (mī-kro-sēf'a-lizm), *n* [*<* *microcephaly* + -ism] A microcephalic condition

microcephalous (mī-kro-sēf'a-lus), *a* [= F. *microcéphale* = Pg. *microcephalo*, *<* NL. *microcephalus*, *<* Gr. *μικροκέφαλος*, small-headed, *<* *μικρός*, small, + *κεφαλή*, head] Having a small head. Specifically — (a) Having the skull small or imperfectly developed. (b) In *zool.*, of or pertaining to the *Microcephala*

Microcephalus (mī-kro-sēf'a-lus), *n* [*<* NL, *<* Gr. *μικροκέφαλος*, small-headed. see *microcephalous*] 1 In *entom.* (a) A South American genus of carabid beetles, with about 6 species, having securiform terminal joints of both maxillary and labial palpi. (b) A genus of nemocerous dipterous insects of the family *Chironomidae*. *Van der Wulp*, 1873 — 2 A genus of reptiles. *Lesson*. — 3. [*<* *ic*] In *pathol.* (a) A microcephalic person. (b) Microcephaly — 4. [*<* *ic*] In *teratol.*, a monster with a small, imperfect head or cranium

microcephaly (mī-kro-sēf'a-li), *n*. [*<* NL *microcephalia*, *q v*] The condition or character presented by a small or imperfectly developed head

Microchæta (mī-kro-kē'tā), *n* [*<* NL, *<* Gr. *μικρός*, small, + *χαίτη*, a mane see *chæta*.] A genus of earthworms. *M. rappti* is a gigantic South African earthworm, four or five feet long, of greenish and reddish coloration. *Beddard*, 1886.

microcharacter (mī-kro-kar'ak-tēr), *n*. [*<* Gr. *μικρός*, small, + *χαρακτήρ*, character: see *character*.] Any zoological character derived from microscopic or other minute examination

microchemical (mī-kro-kem'i-kal), *a* [*<* Gr. *μικρός*, small, minute, + *E. chemical*] Of or pertaining to microchemistry. as, *microchemical* reactions; *microchemical* experiments: distinguished from *macrochemical*

Microchemical examination shows that it performs a complex function
Huxley and Martin, *Elementary Biology*, p 274

microchemically (mī-kro-kem'i-kal-i), *adv* By microchemical processes, by means of or in accordance with microchemistry

microchemistry (mī-kro-kem'i-s-trī), *n* [*<* Gr. *μικρός*, small, minute, + *E chemistry*.] Minute chemical investigation; chemical analysis or investigation applied to objects under the microscope.

Microchiroptera (mī-kro-ki-rop'te-rā), *n*, pl [*<* NL, *<* Gr. *μικρός*, small, + NL. *Chiroptera*, *q v*] A suborder of *Chiroptera*, including the insectivorous or animalivorous (rarely frugivorous or blood-sucking) bats. They have a simple stomach (except *Desmodus*), a large Spigelian and generally small caudate lobe of the liver, the tail contained in the intermembral membrane when present, or freed from its upper surface, the rim of the ear incomplete at the base of the auricle, the index finger rudimentary or wanting and without a claw, the palate not produced back of the molar teeth, and the molar teeth cuspidate. The group includes all bats except the family *Pteropodidae* (which constitutes the suborder *Megachiroptera*), inhabiting most parts of the world, and falling into two large series, the vespertilionine alliance and the emballonurine alliance, the former of three families, the latter of two. *Anisomalora*, *Entomophaga*, and *Insectivora* are synonyms of *Microchiroptera*

microchiropteran (mī-kro-ki-rop'te-ran), *a*, and *n* 1. *a* Of or pertaining to the *Microchiroptera*

II. *n* One of the *Microchiroptera*, any bat except a fruit-bat

microchiropterous (mī-kro-ki-rop'te-rus), *a* Same as *microchiropteran*

microchoanite (mī-kro-kō'a-nit), *a* and *n* [*<* NL *Microchoanites*] 1. *a* Having short septal funnels, as a nautiloid, belonging to the *Microchoanites*

II. *n* A member of the *Microchoanites*
Microchoanites (mī-kro-kō-a-ni'tēz), *n* pl [*<* NL, *<* Gr. *μικρός*, small, + *χοάνη*, a funnel see *choana*, *choamite*.] A group of ellipsochoanoid nautiloid cephalopods whose septal funnels are short. *Hyatt*, *Proc Bost Soc Nat Hist*, 1883, p 260

microchronometer (mī-kro-kro-nom'e-tēr), *n* [*<* Gr. *μικρός*, small, + *χρόνος*, time, + *μέτρον*, measure see *chronometer*] An instrument for registering very small periods of time, such as the time occupied by the passage of a projectile over a short distance, a kind of chronograph. Also called, corruptly, *micronometer*

Microciona (mī-kro-si'ō-nā), *n* [*<* NL, *<* Gr. *μικρός*, small, + *κίον* (κίον), a pillar] A genus of fibrosilicious sponges of the division *Echinomata*. *M. prolifera* is a common sponge on the Atlantic coast of the United States, growing in tide pools in sheeted or branched masses of orange red color

microclastic (mī-kro-klas'tik), *a* [*<* Gr. *μικρός*, small, + *κλαστός*, broken, *<* *κλᾶν*, break. see *clastic*] An epithet applied to a clastic or fragmentary rock or breccia made up of pieces of small size. *Naumann* [Rare]

microcline (mī-kro-klīn), *n* [*<* Gr. *μικρός*, small, + *κλίειν*, incline see *cline*, *clinal*] A feldspar identical in composition with orthoclase, but belonging to the triclinic system. Thin sections often exhibit a peculiar grating like structure in polarized light, due to double twinning. Much of the potash feldspar called orthoclase is really microcline, and the beautiful green feldspar called Amazon stone is here included. See *feldspar* and *orthoclase*

Section of Microcline as seen in polarized light

Micrococcus (mī-kro-kok'us), *n* [*<* NL, *<* Gr. *μικρός*, small, + *κόκος*, a berry, kernel. see *coccus*.] 1 A genus of *Schizomycetes* (fission-fungi or bacteria), and the only one of the tribe *Sphaerobacteria*. It is characterized by globular or oval slight-

by colored cells, either formed by transverse division into filaments of two or several chaplet-like articulations, or united in families, or segregated in gelatinous masses, all destitute of spontaneous movement but exhibiting a simple molecular tremor. Its species are divided into three physiological groups — *chromogenes*, producing coloring matter, as in "red milk" (*M. prodigiosus*, figured under *microbe*), or "golden yellow" (*M. luteus*), *zymogenes*, producing various fermentations, as in animal and vegetable infusions (*M. crepusculum*) or urine (*M. ureae*), and *pathogenes*, producing diseases. Variola, vaccinia, septicaemia, erysipelas, gonorrhoea, and other forms are believed to be produced by micrococci.

Micrococcus of Diphtheria

2. [*l. c.*, pl. *micrococci* (-si)] Any member of this genus

By the specific term *micrococcus* is understood a minute spherical or slightly oval organism (Sphaerobacterium, John), that like other bacteria divides by fission (Schizomycetes), and that does not possess any special organ, cilium or flagellum, by using which it would be capable of moving freely about.

E. Klein, Micro Organisms and Disease, p. 37

Microcoleoptera (mī-kro-kō-lē-op'te-rā), *n.* pl. [*NL.*, < Gr *μικρός*, small, + *NL. Coleoptera*, q. v.] In entom., the smaller kinds of beetles collectively considered

microconidium (mī-kro-kō-nid'i-um), *n.*; pl. *microconidia* (-i) [*NL.*, < Gr *μικρός*, small, + *NL. conidium*] A conidium of small size as compared with others produced in the same species

Microconidia [of *Hypomyces*] or conidia proper very copious. *Cooke*, Handbook Brit. Fungi, p. 776.

microcosm (mī-kro-kōz-m), *n.* [*F.* *microcosme* = Sp. *microcosmos* = Pg. It. *microcosmo*, < LL. *microcosmus* (Boethius), < LGr *μικροκόσμος*, a little world, < Gr *μικρός*, small, + *κόσμος*, world] 1 A little world or cosmos, the world in miniature, something representing or assumed to represent the principle of universality often applied to man regarded as an epitome, physically and morally, of the universe or great world (the *macrocosm*)

If you see this in the map of my *microcosm*, follows it that I am known well enough too! *Shak.* Cor., II, 1. 68.

The ancients not improperly styled him [man] a *microcosm*, or little world within himself.

Bacon, Physical Fables, II, Expl.

Some told me it [a mountain] was fourteen miles high, it is covered with a very *microcosmos* of clouded

Coryat, Crudities, I, 91

In the dark dissolving human heart,
And holy secrets of this *microcosm*,
Dabbling a shameless hand with shameful jest.

Tennyson, Princess, III

Each particle is a *microcosm*, and faithfully renders the likeness of the world

Emerson, Discipline

2 A little community or society

And now the hour has come when this youth is to be launched into a world more vast than that in which he has hitherto sojourned, yet for which this *microcosm* has been no ill preparation

Dunnett

microcosmic (mī-kro-kōz'mik), *a.* [= *F.* *microcosmique*, as *microcosm* + *-ic*] Of or pertaining to a microcosm or to anything that is regarded as such — **Microcosmic salt**, $\text{H}_2\text{N}_2\text{H}_4\text{PO}_4 + 4\text{H}_2\text{O}$, a salt of soda ammonia, and phosphoric acid, originally obtained from human urine. It is much employed as a flux in experiments with the blowpipe

microcosmical (mī-kro-kōz'mi-kal), *a.* [*< microcosmic* + *-al*] Same as *microcosmic*. *Sir T. Browne*, Vulg. Err., II, 3

microcosmography (mī-kro-kōz-mog'ra-fi), *n.* [*< Gr. μικροκόσμος*, microcosm, + *-γραφία*, < *γραφειν*, write Cf. *cosmography*.] The description of man as a "little world"

microcosmology (mī-kro-kōz-mol'ō-jī), *n.* [*< Gr. μικροκόσμος*, microcosm, + *-λογία*, < *λέγειν*, speak: see *-ology*] A treatise on the microcosm, specifically on the human body, or on man.

microcosmos (mī-kro-kōz'mos), *n.* Same as *microcosmus*, 1

microcosmus (mī-kro-kōz'mus), *n.* [LL. (in defs. 2 and 3, *NL.*), < Gr. *μικροκόσμος*, a little world see *microcosm*.] 1. Same as *microcosm*, 1.—2 A tumescence, ascidian, or sea-squirt applied by Linnæus in 1735, and recently revived by Heller as a generic name — 3 [*cap.*] A genus of coleopterous insects *Chaudou*, 1878

microcoulomb (mī-kro-kō-lom'), *n.* [*< Gr. μικρός*, small, + *E. coulomb*] One millionth of a coulomb. See *coulomb*.

microcoustic (mī-kro-kōs'tik), *a.* and *n.* [Irreg. < Gr *μικρός*, small, + *ἀκουστικός*, pertaining to

hearing. see *acoustic*.] 1. *a.* Serving to augment weak sounds; or of pertaining to an instrument for augmenting weak sounds

2. *n.* An aural instrument designed to collect and augment small sounds, for the purpose of assisting the partially deaf in hearing

microcrith (mī-kro-krith), *n.* [*< Gr. μικρός*, small, + *κριθή*, barley see *crith*] In chem., the unit of molecular weight, denoting the weight of the half-molecule of hydrogen

microcrystalline (mī-kro-kris'ta-lin), *a.* [*< Gr. μικρός*, small, + *κρυστάλλινος*, crystalline see *crystalline*] Minutely crystalline. said of crystalline rocks of which the constituents are individually so minute that they cannot be distinguished from each other by the naked eye, crypto-crystalline. Many lithologists use *microcrystalline* and *crypto-crystalline* as synonymous. Rosenbusch, however, uses the former term to designate that structure of the ground mass in which the constituent minerals can, with the aid of the microscope, be specifically determined, and the latter for a structure which can be recognized as crystalline, but in which the individual components can not be specifically identified

microcrystallitic (mī-kro-kris-ta-lit'ik), *a.* [*< Gr. μικρός*, small, + *κρυστάλλος*, crystal, + *-itic* 2 + *-ic*] A term used by Geikie to designate a devitrification product in which this process has been carried so far that little or no glass-base appears, the original glassy substance having become changed into an aggregation of crystallites or "little granules, needles, and hairs" See *microfelsitic*

microcyst (mī-kro-sist), *n.* [*< Gr. μικρός*, small, + *κύστις*, the bladder, a bag, pouch] In *Myxomycetes*, the resting state of swarm-spores, which become rounded off and invested with a delicate membrane, or sometimes only with a firm border, and may return again under favorable conditions to a state of movement. See *Myxomycetes*, swarm-spores

microcyte (mī-kro-sit), *n.* [*< Gr. μικρός*, small, + *κύτος*, a hollow, cavity see *cyte*] 1 A small cell or corpuscle

The *microcytes* Very small bodies, for the most part colourless, freely suspended in the plasma

Huxley and Martin, Elementary Biology, p. 123

2 A small blood-corpuscle, in size from 2 to 6 micromillimeters, found, often in large numbers, in many cases of anemia

microcythemia (mī-kro-si-thē-mi-ā), *n.* [*< Gr. μικρός*, small, + *κύτος*, a hollow (see *microcyte*), + *αἷμα*, blood] That condition of the blood in which there are many corpuscles of diminished size

microcytosis (mī-kro-si-tō'sis), *n.* *Microcythemia*

microdactylous (mī-kro-dak'ti-lus), *a.* [*< Gr. μικρός*, small, + *δάκτυλος*, finger see *dactyl*] Having short or small fingers or toes

microdentium (mī-kro-den'tiz-m), *n.* [*< Gr. μικρός*, small, + *δεν(t)-is*, = *E. tooth*, + *-ism*] Smallness of the teeth

Microdentium — mere smallness of the teeth — was chronicled in fourteen of the hundred cases

Lancet, No. 3432, p. 1152

micro-detector (mī-kro-dē-tek'tor), *n.* [*< Gr. μικρός*, small, + *E. detector*] A sensitive galvanoscope

Microdiptera (mī-kro-dip'te-rā), *n.* pl. [*NL.*, < Gr *μικρός*, small, + *NL. Diptera*] In entom., the smaller kinds of flies collectively considered

Microdon (mī-kro-don), *n.* [*NL.* (Meigen, 1803), < Gr *μικρός*, small, + *ὄδων* (odont-) = *E. tooth*] 1 In entom., an important genus of syrphid flies, containing a few European and about 20 North American species. They are large, nearly bare, usually short and thick set, with flattened scutellum and short wings, in which there is a stump of a vein in the first posterior cell from the third longitudinal vein. The larvae are remarkable objects, resembling shells, and have twice been described and named as mollusks. *M. globosus* is an example

2 In ichth., a genus of pycnodont fishes of the Cretaceous period *Agassiz*, 1833 — 3. In conch., a genus of bivalve mollusks *Conrad*, 1842

microdont (mī-kro-dont), *a.* [*< Gr. μικρός*, small, + *ὄδων* (odont-) = *E. tooth*.] Having short or small teeth

The *microdont* races are the low caste natives of central and southern India, the Polynesi-ans, the ancient Egyptians, mixed Europeans not British, and the British

Senecio, IV, 538

micro-electric (mī-kro-ē-lek'trik), *a.* [*< Gr. μικρός*, small, + *E. electric*] Having electric properties in a very small degree — **Micro-electric metrology**, the measurement of minute electric quantities

microfarad (mī-kro-far'ad), *n.* [*< Gr. μικρός*, small, + *E. farad*] The practical unit of elec-

trical capacity, equal to the millionth part of a farad. It is the capacity of about three miles of an Atlantic cable

microfelstite (mī-kro-fel'sit), *n.* [*< Gr. μικρός*, small, + *E. felstite*] In lithol., a base or ground-mass having a microfelstic structure. See *microfelstic*

microfelstic (mī-kro-fel-sit'ik), *a.* [*< microfelstite* + *-ic*] The designation suggested by Zirkel for a devitrified glass when the devitrification has been carried so far that the hyaline character is lost, but not far enough to give rise to the development of distinctly individualized mineral forms. Other lithologists have used this word with different shades of meaning. Rosenbusch defines it as follows: "This substance which is distinguished from micro and crypto-crystalline aggregates by the absence of any action on polarized light and from what may properly be called glass by not being entirely without structure and by being decidedly less transparent, I call *microfelstic* or the *microfelstic base*"

microfoliation (mī-kro-fō-li-ā'shon), *n.* [*< Gr. μικρός*, small, + *E. foliation*] Microscopic foliation, or that which is not distinctly recognized by the naked eye. A term used by Bonney in discussing the effect of pressure in Paleozoic sedimentary rocks. *Quart. Jour. Geol. Soc.*, XLIV, 44

Microgadus (mī-kro-gā'dus), *n.* [*NL.*, < Gr *μικρός*, small, + *NL. Gadus*, q. v.] A genus of

Atlantic Tomcod or Trout fish (*Microgadus tomcodus*)
(From Report of U. S. Fish Commission)

small gadoid fishes, established by Gill in 1865, the tomcods. *M. tomcodus* is a well known species of the Atlantic coast of the United States. *M. proximus* is its representative on the Pacific coast

Microgaster (mī-kro-gas'ter), *n.* [*NL.* (Latreille, 1804), < Gr *μικρός*, small, + *γαστήρ*, stomach see *gaster* 2] 1 A notable genus of parasitic hymenoptera of the family *Bracconidae*, giving name to the subfamily *Microgasterinae*. They are characterized by the three submarginal cells of the fore wings (the second one often incomplete), and by having the hind tibial spurs more than half the length of the tarsi. Many are known from Europe and North America, as *M. subcompactus* of the former country, which is parasitic on various lepidopterous larvae

2 [*l. c.*] A member of this genus

Microgasterinae (mī-kro-gas'te-rī-nē), *n.* pl. [*NL.*, < *Microgaster* + *-ina*] A large subfamily of *Bracconidae*, typified by the genus *Microgaster*, having the mesonotal sutures invisible and the large marginal cell reaching to the end of the wing. There are many species, of 6 genera, the largest one of which, *Apanteles* has 60 species in Great Britain alone. The larvae parasitize many insects, especially lepidopterous larvae issuing from the body of the host and spinning cocoons either singly or in mass. *A. glomeratus* is an abundant parasite of the cabbage worm, *Pieris rapae*, both in Europe and in North America.

microgeological (mī-kro-jē-ol'ō-jī-kal), *a.* [*< microgeology* + *-ical*] Pertaining to microgeology, dependent on or derived from the use of the microscope in relation to geology, as, *microgeological investigations*

microgeology (mī-kro-jē-ol'ō-jī), *n.* [*< Gr. μικρός*, small, + *E. geology*] That department of the science of geology whose facts are ascertained by the use of the microscope

Microglossa (mī-kro-glos'sā), *n.* [*NL.*, also *Microglossus*, *Microglossum*, < Gr *μικρός*, small, + *γλῶσσα*, the tongue see *glossa*] In ornith., a genus of cockatoos of the family *Cacatuidae*, established by Geoffroy in 1809. It contains the great black cockatoo, as *M. aterrimus* *godath*, and *alcedo*, all inhabitants of New Guinea and other islands of the Papuan region

microglossia (mī-kro-glos'i-i), *n.* [*NL.*, < Gr *μικρός*, small, + *γλῶσσα*, the tongue see *glossa*] Congenital smallness of the tongue

Microglossidae (mī-kro-glos'i-dē), *n.* pl. [*NL.*, < *Microglossa* + *-idae*] A family of psittacine birds, the black cockatoos, synonymous with *Cacatuidae*

Microglossinae (mī-kro-glo-sī-nē), *n.* pl. [*NL.*, < *Microglossa* + *-inae*] A subfamily of *Cacatuidae*, represented by the genus *Microglossa*, and containing the black cockatoos

microgonidial (mī-kro-gō-nid'i-al), *a.* [*< microgonidium* + *-al*] Of, pertaining to, or resembling a microgonidium

microgonidium (mī'krō-gō-nīd'ū-m), *n.*; *pl.* *microgonidia* (-ī) [NL, < Gr μικρός, small, + NL gonidium] A gonidium of small size as compared with certain others produced by the same species

The latter form [of *Chlorococcum*] is said to arise from the former by internal cell division, which results in the production of "gonidia" of two sizes, the larger being termed macrogonidia, and the smaller *microgonidia*.

Bossey, Botany, p. 219

microgram (mī'krō-gram), *n.* [*<* Gr μικρός, small, + *E gram*²] The millionth part of a gram, being about 1/25,000 of a grain troy.

microgranite (mī'krō-gran'it), *n.* [*<* Gr μικρός, small, + *E granite*] In *potroy* See *quartz-porphry*

microgranitic (mī'krō-grā-nī't'ik), *a.* [*<* *microgranite* + *-ic*] Pertaining to microgranite — **Microgranitic structure** See *quartz porphyry*

microgranulitic (mī'krō-gran-ū-lī't'ik), *a.* [*<* Gr μικρός, small, + *E granulite*] In *lithol.*, an epithet applied by Lévy to a form of granitoid structure which is so finely crystallized that it cannot be recognized by the naked eye, but which, under the microscope, is revealed as being made up of crystalline individuals each having its own independent orientation, so that in polarized light it presents the appearance of a brilliantly colored mosaic. The microgranulitic structure, as this term is used by Lévy, differs from the micropagmatic. In the crystalline individuals of the latter having all one common orientation

micrograph (mī'krō-grāf), *n.* [*<* Gr μικρός, small, + γραφειν, write] Same as *micropantograph*

micrographer (mī'krō-grā-fōr), *n.* [*<* *micrograph* + *-er*] One who is versed in micrography.

micrographic (mī'krō-grāf'ik), *a.* [= *F micrographique*, as *micrographie* + *-ic*.] Of or pertaining to micrography.

micrographist (mī'krō-grā-fist), *n.* [*<* *micrograph* + *-ist*] One who is skilled in micrography, a micrographer

micrography (mī'krō-grā-fī), *n.* [= *F micrographie* = *Sp micrografia* = *It micrografia*, < Gr μικρός, small, + γραφειν, write] Cf Gr μικρογραφειν, 'write small,' i e with a short vowel] The description of objects too small to be discerned without the aid of a microscope

Microhierax (mī'krō-hī'e-raks), *n.* [NL, < Gr μικρός, small, + ιεραξ, a hawk, falcon see *Hierax*] A genus of very small hawks of the family *Falconidae*, established by R B Sharpe in 1874, the falconets, the finch-falcons. It contains the diminutive species usually referred to the genus *Hierax*, which name is preoccupied in another department of zoology. The range of the genus includes southern Asia, Java, Sumatra, Borneo, etc. There are several species, as *M. coriaceous*, *fringillarius*, *melanoleucus*, and *erythrogenus*

microhm (mīk'rōm), *n.* [*<* Gr μικρός, small, + *E ohm*] An electrical unit equal to the millionth part of an ohm

microlepidopter (mī'krō-lep-i-dōp'tēr), *n.* In *entom.*, an insect of one of the families included in the *Microlepidoptera*

Microlepidoptera (mī'krō-lep-i-dōp'te-rā), *n. pl.* [NL, < Gr μικρός, small, + NL *Lepidoptera*, q v] The smaller and more simply organized moths, including, generally, the smaller *Pyralida*, the *Tortricidae*, the *Tineidae*, and the *Pterophorida*. These insects do not constitute a natural division, and the name is merely used for convenience, the other members of the order being distinguished as *Macrolepidoptera*, or simply as *Lepidoptera*

microlepidopteran (mī'krō-lep-i-dōp'te-ran), *a* and *n.* I. A *Microlepidopterus*
II. *n.* A *microlepidopter*

microlepidopterist (mī'krō-lep-i-dōp'te-ris't), *n.* [*<* *Microlepidoptera* + *-ist*] One who is versed in the natural history of *Microlepidoptera*

microlepidopterous (mī'krō-lep-i-dōp'te-rus), *a.* [*<* *Microlepidoptera* + *-ous*] Of or pertaining to the *microlepidoptera*.

Microlia (mī'krō-lī's'ī-ā), *n.* [NL (Don, 1823), so called as having the leaves usually small, < Gr μικρός, small, + ὅλιος, universal, general < ὅλος, all] A genus of plants of the natural order *Melastomaceae* and type of the tribe *Microlieae*, characterized by very unequal stamens with beaked or tube-bearing anthers, the connective elongated at the base, and by the calyx-lobes being shorter than the tube. They are erect branching undershrubs usually not more than a foot or two high, with small leaves which are generally glandular dotted and solitary commonly rose-purple or white flowers which are axillary or sometimes terminal. There are about 98 species, natives of Brazil, Guiana, and Peru. A few are sometimes found in greenhouses.

Microlieae (mī'krō-lī-s'ī-ē-ē), *n. pl.* [NL (Triana, 1871), < *Microlia* + *-eae*] A tribe of plants of the natural order *Melastomaceae* and the suborder *Melastomeae*, characterized by the cylindrical or angular capsule, conical or convex at the apex, by the connective often being produced below the anther-cells, and by oblong or ovoid seeds. The tribe embraces 15 genera, *Microlia* being the type, and about 250 species, all of which are found in tropical America

microlite (mī'krō-lī't), *n.* [*<* Gr μικρός, small, + λίθος, stone see *-lite*] 1 A mineral related to pyrochlore, occurring in regular octahedrons having a brownish color and a resinous luster. It is essentially a niobate of calcium. It was first found at Chesterfield in Massachusetts, in minute crystals (whence the name), later in Virginia in larger crystals sometimes weighing several pounds
2 Same as *microlith* and incorrect use

microlitter (mī'krō-lē'tēr), *n.* [*<* Gr μικρός, small, + *E liter*.] The millionth part of a liter

microlith (mī'krō-līth), *n.* [*<* Gr μικρός, small, + λίθος, stone] A name proposed by Vogelsang, in 1867, to designate the "microscopic acicular components of rocks", a "microscopic individual" (*Zirkel*). The usage of later lithologists differs considerably in the application of this term. By some it is regarded as the equivalent of *crystalloids*, which is properly an aggregation of microscopic globular forms (globulites). By others crystallites are considered as differing from microliths in that the latter have the internal structure of true crystals, while in the former this cannot be recognized. Elongated or lath shaped forms and such as resemble an hour glass in shape are those now most generally designated as *microliths*, if curved or more or less twisted or hair-like, they are frequently called *trichites*. Microliths are most frequently seen in rocks of igneous origin, and are especially abundant as products of the devolatilization of the glassy lavas. The feldspars, hornblende, augite, and apatite are minerals most commonly found assuming this form

microlithic (mī'krō-līth'ik), *a.* [*<* Gr μικρός, small, + λίθος, a stone, + *-ic*] 1 Of or pertaining to or consisting of small stones opposed to *megalthic*

The cognate examples in the *microlithic* styles afford us very little assistance
J Ferguson, Rude Stone Monuments, p. 6

2 In *lithol.*, pertaining to or characterized by microliths

microlithic (mī'krō-lī't'ik), *a.* [*<* *microlith* + *-ic*] Same as *microlithic*, 2

microlological (mī'krō-lōj'ī-kal), *a.* [*<* *micrology*² + *-ic*.] Characterized by minuteness of investigation

Of that equanimity, circumspection, patience of research, intellectual discipline, and equipment of *micrological* scholarship, without which it is given to no man to be a philologist, he has, unhappily, made the most pernicious provision
F Hall, Mod Eng, p. 350

microlologically (mī'krō-lōj'ī-kal-ī), *adv.* In a microlological manner, by means of exact attention to minute details

If things are to be scanned so *microlologically*
Lowell, Among my Books, 2d ser, p. 277, note

micrology¹ (mī'krō-lōj'ī), *n.* [*<* Gr μικρός, small, + λογία, < λογος, speak see *-ology* Cf *micrology*²] That part of science which is dependent on microscopic investigations; micrography

micrology² (mī'krō-lōj'ī), *n.* [*<* Gr μικρολογία, the quality of being careful about trifles, < μικρολογος, careful about trifles, penurious, capitious, lit gathering little things, < μικρός, small, little, + λογος, gather see *-ology* Cf *micrology*¹] Undue attention to minute, unimportant matters, minute erudition

There is less *micrology* in his erudition
Roberts, W Taylor, II 146. (Dames)

Micromastictora (mī'krō-mas-tīk'tō-rā), *n. pl.* [NL, < Gr μικρός, small, + μαστικτηρ, a scourger, < μαστιγην, whip, scourge, < μάστιξ (μαστιγ-), a whip, scourge] In Sollas's classification of sponges, one of two main branches of the phylum *Parazoa* or *Spongia*, characterized by the comparatively small size of the choanocytes, which are about 0.003 millimeter in diameter. The *Micromastictora* are all non-calcareous sponges, and are divided by Sollas into two classes, *Mysacina* and *Silicispongiae*. They are also called *Noncalcareae* (Vosniak) and *Platyspongiae* (Sollas). The term is contrasted with *Megamastictora*

micromelus (mī'krō-mē-lus), *n.* [*<* Gr μικρομήλης, small-limbed, < μικρός, small, + μέλος, a limb] In *teratol.*, a monster with abnormally small limbs

micromeral (mī'krō-mē-ral), *a.* [*<* *micromere* + *-al*] Of or pertaining to a micromere as, *micromeral* blastomeres

micromere (mī'krō-mēr), *n.* [*<* Gr μικρομερής, consisting of small parts, < μικρός, small, + μέρος, a part] The smaller one of two masses or moieties into which the vitellus of a lamelli-

branch, as a fresh-water mussel, divides; the so-called "animal cell" of Rabi, which further subdivides into blastomeres. See *macromere*.

The segmentation resembles that of other mollusks, the *micromeres* appearing at the formative pole by separation of the "protoplasmic" portion of the "macromere."

Roy Micro Soc Jour, 2d ser VI II 224.

Micromeria (mī'krō-mē'rī-ā), *n.* [NL (Benth), < Gr μικρός, small, + μέρος, part.] A genus of labiate plants of the tribe *Satureineae* and the subtribe *Melisseae*. The calyx is tubular, commonly thirteen nerved, and about equally five toothed. The corolla is short, rarely exerted from the calyx, bilabiate, the upper lip erect, flatish, entire, or emarginate, the lower spreading and three-parted. The filaments are arcuate-ascending, the anterior pair longer, the anthers are two-lobed. The flowers are borne in whorls, axillary or crowded into a spike, or are sometimes single or cymose in the opposite axils. The species, numbering about 60, are low herbs or somewhat shrubby plants, sweet-odorous, of various habit, distributed pretty widely in the Old World, with a few in North America and the West Indies, and two or three in the United States. *M. Douglasii* is a well known sweet scented herb of California called *yerbe buena*. *M. obovata* of the West Indies has been called *allheal*

micromeric (mī'krō-mēr'ik), *a.* [*<* *micromere* + *-ic*] Same as *micromeral*

micromeritic (mī'krō-mēr-ī't'ik), *a.* [*<* μικρός, small, + μέρος, a part.] A term suggested by Vogelsang to designate a granitoid or thoroughly crystalline texture of a rock so fine as to be recognizable only with the aid of the microscope

micrometer (mī'krō-mē'tēr), *n.* [= *F micromètre* = *Sp micrómetro* = *Pg It micrometro*, < Gr μικρός, small, + μέτρον, measure] An instrument for measuring microscopic lengths and angles. All micrometers depend upon two principles, magnification and oblique measurement. Magnification determines an angle by measuring the arc that subtends it upon a circle of large fixed radius, having its center coincident with the vertex of the angle. Thus, a mirror turning through a small angle may reflect a spot of light upon a distant scale. Oblique measurement (see *diagonal scale*, under *diagonal*) ascertains a length by measuring the distance at which it subtends a small fixed angle. Thus, the *wedge-micrometer* is a long wedge-shaped piece of metal or glass with its sloping sides as truly plane as possible, and graduated along its length. It is used to measure the distance between two points having a rigid circuitous connection, but a vacant space about the line between them. The wedge being thrust between the points, the distance it penetrates shows how far apart they are. The principle of oblique measurement is, in nearly all micrometers applied under the form of a fine screw, the number of whose revolutions and parts of a revolution, in advancing from one point to another, measures the amount of this advance. In this case the pitch of the screw is the fixed angle, while the reading of the screw head is proportional to the variable radius at which this angle is subtended by the length to be measured — **Annular or circular micrometer**, a micrometer consisting, in its most approved form, of a disk of parallel plate glass, having in its center a round hole to the edges of which a ring of metal is cemented and afterward turned in a lathe. The disk being mounted in a brass tube, so that it may be accurately adjusted in the focus of the eyepiece and applied to a telescope, the metal ring is alone visible, and appears as if suspended in the atmosphere, whence the instrument is called the *suspended annular micrometer*. Brande and Cox Dict., II 516 (changed). — **Double-image micrometer**, a micrometer having an optical apparatus which produces two images of every object, as A and A', B and B'. Then, A may be brought into coincidence with B', or B may be brought into coincidence with A', and the position of the parts producing the double image will then show the distance between A and B. — **Filar micrometer**, a micrometer in which the two objects whose distance is to be measured are brought into coincidence with two spider lines in the principal focus of a telescope or microscope, one of these webs being movable by turning a micrometer screw. The astronomical filar micrometer is also provided with a graduated position circle, apparatus for illumination etc. — **Micrometer-balance**, a form of balance adapted to the exact determination of very small weights or differences in weight. That devised by Kershaw for testing the weight of gold pieces consists of a steelyard supported on a knife-edged fulcrum and geared with a wheel graduated to half grains. If the coin is of correct weight, the index points to zero. If it is light, the leverage of the beam turns the wheel until equilibrium is attained, when the index bar points to the number of half-grains of shortage. E H Knight. — **Mother-of-pearl micrometer**, Cavallo's micrometer, which consists of a thin semitransparent piece of mother of pearl, of an inch wide, having fine graduations. It is mounted within the tube at the focus of the eye-lens of the telescope, where the image of the object under observation is produced.

micrometer-screw (mī'krō-mē'tēr-akrō), *n.* A screw attached to optical and mathematical instruments as a means of measuring very small angles. The pitch of the screw is made exceedingly small, while the graduated head is large, thus securing great exactness and simplicity in use

micrometric (mī'krō-mēt'rik), *a.* [= *F micrométrique*, as *micromètre* + *-ic*.] Pertaining to the micrometer, made by the micrometer as, *micrometric* measurements

micrometrical (mī'krō-mēt'rī-kal), *a.* [*<* *micrometric* + *-al*] Same as *micrometric*

micrometrically (mī'krō-mēt'rī-kal-ī), *adv.* By means of a micrometer

micrometry (mi-krom'et-ri), *n.* [= F. *micrométrie*, as *micrometer* + *-y*.] The art of measuring small objects or distances with a micrometer.

micromillimeter, micromillimetre (mi-kro-mil'1-mē-tēr), *n.* [*Gr. μικρός*, small, + *E. millimeter*.] 1 The millionth part of a millimeter. — 2 The thousandth part of a millimeter. formerly and sometimes still used by biologists. The equivalent used by metrologists and physicists is *micron*.

micromineralogical (mi'krō-min'g-ra-loj'1-kal), *a* [*Gr. μικρομινεράλογος* + *-ical*.] Pertaining to micromineralogy.

Rocks may occur the structure of which has been yet more obscured by subsequent micromineralogical change. *Quart. Jour. Geol. Soc.*, XLIV 42.

micromineralogy (mi'krō-min-e-ral'ō-jī), *n.* [*Gr. μικρός*, small, + *E. mineralogy*.] That part of mineralogy which has to do with the study of the optical, chemical, or other characters of minerals by means of the microscope, as they are observed, for example, in thin sections of rocks.

micron (mi'kron), *n.* [NL, < *Gr. μικρόν*, neut. of *μικρός*, also *μικρός*, small, minute.] The millionth part of a meter, or $\frac{1}{1,000,000}$ of an English inch. This term has been formally adopted by the International Commission of Weights and Measures, representing the civilized nations of the world, and is adopted by all metrologists. The quantity is denoted by the Greek letter μ written above the line, as, 25^{μ} 4.

Micronesian (mi'krō-nē'si-an), *a* and *n.* [*Gr. Μικρονησία* (< *Gr. μικρονήσιος*, a small island, < *μικρός*, small, + *νήσιος*, an island, see def.) + *-an*.] 1. *a* Of or pertaining to Micronesia, a collection of islands and groups of islands, chiefly of coral formation, in the Pacific ocean, the principal of which are the Marshall, Gilbert, Caroline, and Ladrone groups. II. *n* A native or an inhabitant of Micronesia.

micronometer (mi'krō-nom'e-tēr), *n.* A corrupt form of *microchronometer*.

micronucleus (mi'krō-nū'klē-us), *n*; *pl. micronuclei* (-ī) [NL, < *Gr. μικρός*, small, + *NL nucleus*, *q. v.*] A small nucleus distinguished from *macronucleus*.

The *micronucleus* is a hermaphrodite sexual element, of sole importance in conjugation. *Amer. Nat.*, XXII 265.

micronymy (mi'kron'1-mī), *n.* [*Gr. μικρόνυμος*, < *μικρός*, small, + *ὄνομα*, *ὄνομα*, name.] The use of short easy words instead of long hard ones.

Astronomers have set an example in *micronymy* that anatomists might well follow.

Buck's Handbook of Med. Sciences, VIII 529.

micro-organic (mi'krō-ōr-gan'ik), *a* [*Gr. μικρός*, small, + *E. organic*, after *micro-organism*.] Having the character of a micro-organism, or of pertaining to microbes and other micro-organisms, microbial.

micro-organism (mi'krō-ōr-gan-izm), *n.* [*Gr. μικρός*, small, + *E. organism*.] A microscopic organism, as a bacillus, bacterium, or vibrio, a microbe, a microzoary.

The *microorganisms* of the principal infectious diseases of men and the lower animals. *Amer. Nat.*, XXIII 50.

Micropalama (mi'krō-pal'a-mā), *n.* [NL, < *Gr. μικρός*, small, + *παλάμη*, the palm of the hand, see *palm*.] A genus of *Scolopacidae* established by S. F. Baird in 1858 so called from the

Stilt-sandpiper (*Micropalama himantopus*)

sempalmation of the feet; the stilt-sandpipers. There is but one species, *M. himantopus*, a common bird of North America. It is migratory through the United States in spring and fall, breeding in high latitudes.

micropantograph (mi'krō-pan'tō-graf), *n.* [*Gr. μικρός*, small, + *E. pantograph*.] An instrument constructed on the general principle of the pantograph for executing extremely minute writing and engraving. By means of this instrument the Lord's prayer has been written on glass within the space of $\frac{1}{100,000}$ of a square inch. Also called *micrograph*.

microparasite (mi'krō-par'g-sit), *n.* [*Gr. μικρός*, small, + *E. parasite*.] A parasitic micro-organism.

The number of substances which are less injurious to man than to *micro-parasites* is very small. *Science*, III 130.

microparasitic (mi'krō-par-a-sit'ik), *a* [*Gr. μικροπαράσιτος* + *-ic*.] Having the character of or pertaining to microparasites, caused by microparasites, as, *microparasitic diseases*.

micropathological (mi'krō-path-o-loj'1-kal), *a* [*Gr. μικροπαθολογικός* + *-ical*.] Of or pertaining to micropathology, as, *micropathological investigation*.

micropathologist (mi'krō-pā-thol'ō-jist), *n.* [*Gr. μικροπαθολόγος* + *-ist*.] One who treats of or is versed in micropathology.

micropathology (mi'krō-pā-thol'ō-jī), *n.* [*Gr. μικρός*, small, + *E. pathology*.] 1 The scientific study of micro-organisms in their relations to disease. — 2 Morbid histology.

micropegmatite (mi'krō-peg'ma-tit), *n.* [*Gr. μικρός*, small, + *E. pegmatite*.] A rock having a micropegmatitic structure.

micropegmatitic (mi'krō-peg-ma-tit'ik), *a* [*Gr. μικροpegματιτικός* + *-ic*.] Having the structure of graphic granite, but in a microscopic rather than macroscopic form. See *pegmatite* and *microgranulitic*.

micropertitic (mi'krō-pēr-tit'ik), *a* [*Gr. μικρός*, small, + *E. perthite* + *-ic*.] Exhibiting, under the microscope, the structure of perthite — that is, an interlamination of orthoclase (or microcline) and albite. *Nature*, XXXVII 459.

microphagist (mi'krōf'a-jist), *n.* [*Gr. μικρός*, small, + *φάγω*, eat, + *-ist*.] An eater of microscopic objects, an animal that feeds upon organisms of microscopic size.

Several species [of diatoms] have been supplied in abundance by the careful dissection of the above *microphagists*. *W. B. Carpenter, Micros* (Phila. ed., 1850), p. 305.

microphone (mi'krō-fōn), *n.* [= F. *microphone* < *Sp. micrófono*, < *Gr. μικρός*, small, + *φωνή*, voice, sound.] An instrument for augmenting small sounds.

The instrument invented for this purpose by Mr. Hughes in 1878 is based on the fact that when substances possessing little electrical conductivity are placed in the course of an electric current, the conductivity of the system is much increased by even the very smallest amount of pressure. The instrument has various forms, but in most of them one piece of charcoal is held loosely between two other pieces in such a manner as to be affected by the slightest vibrations conveyed to it by the air or by any other medium. The two external pieces are placed in connection with a telephone, and when the ear is placed at the ear piece of the telephone the sounds caused by a fly walking on the wooden support of the microphone appear as loud as the tramp of a horse. By suitable arrangements the sounds of the human voice conveyed from a distance by the telephone can be made audible in every part of a hall. — **Microphone relay**, a delicate microphone mounted on or connected with the membrane of the receiving telephone, as a relay. See *relay*.

microphonic (mi'krō-fōn'ik), *a* [*As microphone* + *-ic*.] Of or pertaining to or obtained by means of the microphone; serving to intensify small or weak sounds, microacoustic. Also *microphonous*.

A large induction coil is essential in connection with the transmitter when this receiver is used, and any *microphone* transmitter will answer. *T. D. Lockwood, Elect., Mag., and Teleg.*, p. 315.

microphonics (mi'krō-fōn'iks), *n.* [Pl. of **microphonicus* see *-ics*.] The science of augmenting small sounds.

microphonous (mi'krō-fō-nūs), *a* [*As microphone* + *-ous*.] Same as *microphonic*.

microphony (mi'krō-fō-nī), *n.* [= F. *microphonie*, < *Gr. μικροφωνία*, weakness of voice, < *μικρός*, small, + *φωνή*, voice.] Weakness of voice.

microphotograph (mi'krō-fō'tō-gráf), *n.* [*Gr. μικρός*, small, + *E. photograph*.] 1 A photograph of any object, made so small as to require a microscope for its examination; "a microscopic photograph of a macroscopic object" (*A. C. Merce*). — 2 See *photomicrograph*.

microphotography (mi'krō-fō'tō-gráf), *n.* [*Gr. μικρός*, small, + *E. photography*.] The photographing of objects of any size upon a microscopic or very small scale. A notable use of microphotography was the copying of letters and despatches to be carried by carrier pigeons during the siege of Paris in 1870-1. (Compare *photomicrography*.)

microphthalmia (mi'krōf-thal'mi-a), *n.* [NL, < *Gr. μικρόφθαλμος*, having small eyes, < *μικρός*, small, + *ὄφθαλμος*, eye, see *ophthalmia*.] An abnormal smallness of the eye. Also *microphthalmus*.

microphthalmic (mi'krōf-thal'mik), *a* [*Gr. μικροφθαλμικός* + *-ic*.] Pertaining to or characterized by microphthalmia.

microphthalmia (mi'krōf-thal-mi), *n.* [*Gr. μικροφθαλμία*, *q. v.*] Same as *microphthalmia*.

Microphthira (mi'krōf-thi'ra), *n. pl.* [NL, < *Gr. μικρός*, small, + *φθίρα*, a louse.] In Latreille's system of classification, the ninth family of his *Acara*, or *Acari*, consisting of the six-legged larval stages of various mites. *Leptus* and the two other supposed genera which he located here represent the genera *Aryas* and *Trombidium*. Also *Microphthirus*.

microphthire (mi'krōf-thir), *n.* A larval acarid with six legs, a member of the *Microphthira*.

microphylline (mi'krō-fil'in), *a* [*As microphyllous* + *-ine*.] Composed of minute leaflets or scales.

Considered in the way of analogy the foliaceous *Verrucaria* may be said to represent *Unilobaria* and *Pannaria* passing, like both of these, into *microphyllinae*, and like the last into finally almost crustaceous forms. *Tuckerman, Gen. Lichenum*, p. 245.

microphyllous (mi'krō-fil'us), *a* [*Gr. μικρόφυλλος*, having small leaves, < *μικρός*, small, + *φύλλον*, leaf.] In bot., having small leaves.

microphysiology (mi'krō-fiz-i-ol'ō-jī), *n.* [*Gr. μικρός*, small, + *E. physiology*.] See *physiology*.

microphytal (mi'krō-fi-tal), *a* [*Gr. μικροφύτιος* + *-al*.] Pertaining to, of the nature of, or consisting of microphytes.

microphyte (mi'krō-fit), *n.* [= F. *microphyte*, < *Gr. μικρός*, small, + *φύτον*, a plant.] A microscopic plant, especially one that is parasitic in its habits.

microphytic (mi'krō-fit'ik), *a* [*Gr. μικροφύτιος* + *-ic*.] Pertaining to or caused by microphytes, as, *microphytic diseases*.

micropod (mi'krō-pod), *n.* A member of the *Micropoda*.

Micropoda (mi'krō-pō-dā), *n. pl.* [NL, < *Gr. μικρός*, small, + *πούς* (pod-) = *E. foot*.] In some systems, a division of monomyarian bivalves, comprising those which have the foot rudimentary or obsolete, as scallops, oysters, and the like.

Micropodidae (mi'krō-pō-dī-dē), *n. pl.* [NL, < *Micropus* (-pod-) + *-idae*.] In ornith., a family of fissirostral picaean birds, the swifts or *Cypselidae*. See cut under *Cypselus*.

Micropodinae (mi'krō-pō-dī-nē), *n. pl.* [NL, < *Micropus* (-pod-) + *-ina*.] In ornith., the typical swifts or *Cypselinae*.

Micropodoides (mi'krō-pō-dōi-dē-dē), *n. pl.* [NL, < *Micropus* (-pod-) + *-oides*.] A superfamily of picaean birds composed of the swifts and humming-birds, *Cypselidae* and *Trochilidae*, *Cypseliformes* in a strict sense, *Cypselomorphae* without the *Cypselimulidae*.

microporphyrithic (mi'krō-pōr-fī-rī'thik), *a* [*Gr. μικρός*, small, + *E. porphyrithic*.] See *porphyrithic*.

microporosopus (mi'krō-pōr-sō-pus), *n.* [*Gr. μικρός*, small, + *πορώς*, pore.] In teratol., a monster with an imperfectly developed face.

micropsia (mi'krōp'si-ā), *n.* [NL, < *Gr. μικρός*, small, + *ὄψις*, view.] In pathol., an affection of the eye in which objects appear less than their actual size.

Microptera (mi'krōp'te-rā), *n. pl.* [NL, neut. pl. of *micropterus* see *micropterus*.] In entom. (a) The name given by Gravenhorst in 1802 to the rove-beetles (*Staphylinidae*) and their allies, on account of the shortness of the wing-covers. They are now called *Brachelytra*. (b) A group of dipterous insects named by Robineau-Desvoidy in 1830.

Micropterinae (mi'krōp'te-rī-nē), *n. pl.* [NL, < *Micropterus* + *-ina*.] A subfamily of *Cyrtotracheida*, typified by the genus *Micropterus*.

micropteros (mi'krōp'te-rus), *a* [*Gr. μικροπτερος*, < *Gr. μικρός*, small, + *πτερον*, a wing, = *E. feather*.] Having short wings or fins.

Micropterus (mi'krōp'te-rus), *n.* [NL see *micropteros*.] 1 In ichth., a genus of centrarchid fishes, the type of the subfamily *Micropterinæ*, established by Lacépède in 1802. There are two species, *M. dolomieu* and *M. salmoides*, or the small and large mouthed black bass, both highly prized by sportsmen and epicures. Bases of this genus are variously known as green lake bass, marsh, river etc. bass, black, yellow, and pumpkin perch, and trout perch, black trout, white trout, northern or Roanoke chub, and by many other local or fanciful misnomers. Sometimes called *Grytes* set cut at black bass 1. 2 In ornith., a genus of sea-ducks of the family *Anatidae* and subfamily *Fuligulina*, named by Lesson in 1831. There is but one species, *M. cine-reus*, the well known steamer duck of South America. The genus is now called *Tachyeres*, the name *Micropterus* being preoccupied in ichthyology.

3. In entom., a genus of coleopterous insects.

Micropuccinia (mī'krō-puk-sin'ī-ſ), *n. pl.* [NL., < Gr *μυρρῖς*, small, + NL *Puccinia*.] A small group of tremelloid *Uredineae* distinguished by Schroeter, in which only teleutospores are known, as in *Puccinia Pruni* and *P. Asari*. The teleutospores drop off when ripe, and only germinate after a long period of rest. See *Uredineae*.

Micropus (mī'krō-pus), *n.* [NL., < MGr *μικρός*, having small feet, < Gr *μικρός*, small, + *ποῖς* (pod-) = E *foot*.] 1. In ornith. (a) The typical genus of *Micropodidae* same as *Cypselus* *Meyer and Wolf*, 1810. (b) A genus of short-footed thrushes or *Brachypodinae* founded by Swainson in 1831, now referred to the *Tympanuchus*. It contains a number of Indian and Malayan species, as *M. chalciocephalus*, *phaeocephalus*, *melanocephalus*, *melanoleucus*, and others. The genus is also called *Microtus*, *Brachypodius*, *Proscopus*, and *Isochoreus*.

2 In ichth., a name of two genera of fishes, one founded by J. E. Gray, 1831, the other by Kner, 1868—3. In entom., a tropical American genus of lygand bugs erected by Spinola in 1837. For a long time the destructive chinch bug of the United States was called *M. destructor*, but it is now placed in the genus *Blattella*.

micropylar (mī'krō-pī-lār), *a.* [*< micropyle* + *-ar*.] Pertaining to or having the character of a micropyle.

micropyle (mī'krō-pīl), *n.* [= F *micropyle*, < Gr *μικρός*, small, + *πύλη*, gate, orifice.] 1. In bot., the orifice or canal in the coats of the ovule leading to the apex of the nucleus, through which the pollen-tube penetrates. The name is also applied to the corresponding part of the seed, which indicates the position of the embryo. See *foramen*, 2. See out under *amphitropous*.

2 In zool. (a) The scar or hilum of an ovum at the point of its attachment to the ovary. (b) Any opening in the coverings of an ovum through which spermatozoa may gain access to the interior, or a cluster of minute pores on the surface of an egg through which fertilization is effected. On the eggs of lepidopterous insects these pores often form a rosette at one end.

microrhabd (mī'krō-rabd), *n.* [*< Gr. μικρός*, small, + NL *rhabdus*, q v.] A little rhabdus, a microscelere or flesh-spicule of a sponge in the form of a rhabdus. *W. J. Sollas*, *Eucybe Brit.*, XXII, 417.

microrheometrical (mī'krō-rē-ō-met'ri-kal), *a.* [*< Gr. μικρός*, small, + *ρῆμα*, a flowing (< *ρῆναι*, flow), + *μέτρον*, a measure. Cf. *rheometric*.] Pertaining to a method of determining the nature of bodies in solution when flowing through small or capillary tubes.

Microrhynchus (mī'krō-ring'kus), *n.* [NL., < Gr *μικρός*, small, + *ῥυγχος*, snout, beak.] In mammal., a genus of woolly lemurs, of the subfamily *Indrimate*. The species is called *M. laniger*. See *avahi*.

Microsauria (mī'krō-sā'ri-ā), *n. pl.* [NL., < Gr *μικρός*, small, + *σαῦρος*, a lizard.] A group of labyrinthodont amphibians founded by J. W. Dawson upon the genera *Dendrerpeton*, *Hylaeopetion*, and *Hylonotus*.

microsaurian (mī'krō-sā'ri-an), *a. and n.* [*< Microsauria* + *-an*.] I. *a.* Pertaining to the *Microsauria*, or having their characters.

II. *n.* A member of the group *Microsauria*.

microscelere (mī'krō-skēlēr), *n.* [*< NL. microscelus*, < Gr *μικρός*, small, + *σκληρός*, hard.] A flesh-spicule of a sponge. Microsceleres are generally of minute size, and serve usually for the support of a single cell.

microsclerous (mī'krō-skēl'rus), *a.* [As *microscelere* + *-ous*.] Having the character of a microscelere.

microsclerum (mī'krō-skēl'rum), *n.*, *pl. microsclera* (-rā) [NL.] Same as *microscelere*.

microscope (mī'krō-skōp), *n.* [= F *microscope* = Sp. Pg. It *microscopio*, < NL. *microscopium*, < Gr *μικρός*, small, + *σκοπεῖν*, view.] 1. An optical instrument consisting of a lens or combination of lenses (in some cases mirrors also) which magnifies and thus renders visible minute objects that cannot be seen by the naked eye or enlarges the apparent magnitude of small visible bodies, so as to render possible the examination of their texture or structure. The *angle microscope*, which is the simplest form, is merely a convex lens, near to which the object to be examined is placed, it is also called a *magnifying glass* or *lens* (see *magnifying lens*, under *lens*). The *compound microscope* consists essentially of two lenses, or systems of lenses, one of which the object-glass or objective, forms an enlarged inverted image of the object, and the other, the eyepiece or ocular, magnifies this image. The eyepiece and objective (see these words) are placed at the opposite ends of the tube or body, which is often made of two closely fitting

parts so that its length (and thus the distance between the glasses) can be varied at will, it is then called a *draw-tube*. The object under examination is placed upon a support, called the *stage*, beneath the objective, its position upon this may be adjusted by the hand, or, better, the object and the stage (then called a *mechanical stage*) are moved together by some mechanical arrangement, as, for example, by two screws giving motions in two directions at right angles. The proper distance between the objective and the object (such that the image of the latter shall be seen clearly, or be in *focus*) is usually attained by the movement of the tube as a whole. This is accomplished by the rapid motion of the *coarse adjustment*, and more slowly and accurately, as is necessary in the case of high powers, by an arrangement called the *slow motion* or *fine adjustment*. The necessary illumination is obtained by a concave mirror below the stage, which reflects the light upon the object. An achromatic condenser, usually in connection with a diaphragm, is often added to converge the light more strongly, for opaque objects a bull's eye condenser, a *lieberkuhn*, or some other form of reflector is employed. The body of the microscope, with the stage, etc., is supported firmly upon a stand, and usually attached by a joint which allows of its being inclined at any desired angle between the vertical and horizontal positions. Many accessories, or special devices applicable to particular uses, may be added to the microscope in its essential form, as a micrometer, polarizing prisms, camera lucida, etc. The compound microscope itself often varies widely in construction, according to the character of the work for which it is to be used (Compare also the phrases below).

2. [*cap.*] A constellation. See *Microscopium* —

Achromatic microscope See *Achromatic* — **Binocular microscope**, a microscope so constructed that the object may be viewed simultaneously by both eyes, with the advantage (usually but not necessarily attained) that it is then seen in relief. It has a single objective, but two tubes, each with its own eyepiece, a prism causes the luminous rays from the objective to separate and pass through each tube — **Double-bodied microscope**, a microscope in which the object under examination can be viewed by more than one person at the same time. As in the binocular microscope, a prism divides the rays from the objective. Two other prisms receive the separated rays, and the respective pencils are directed through the different bodies of the instrument — **Filar microscope**, a microscope having cross wires in the focus of the eyepiece — **Inverted or chemical microscope**, one with the object-glass placed beneath the object and the stage. The luminous rays which have passed down through it are reflected by an inverting prism up the obliquely placed tube to the eyepiece. This form is sometimes used in chemical work, when acid fumes are present — **Magnifying power of a microscope** See *magnify* — **Monocular microscope**, one with a single tube, for use with one eye only — **Panoramic microscope**, a name sometimes given to a microscope having the eyepiece in a sliding draw tube (see def. 1) — **Petrographical microscope**, a form of microscope especially adapted for minute study of the structure of rocks. It is provided with a graduated and revolving stage and an arrangement for accurately centering the object-glass. It has also a polarizing apparatus, of which the upper Nicol prism or analyzer is contained in a separate support which can be easily revolved on a graduated circle or removed at will. The lower Nicol or polarizer is supported beneath the stage, and can also be revolved in a graduated collar. With these arrangements the directions of light-extinction in a section of a crystal can easily be determined. Besides the usual eyepiece and object-glass, an additional lens, or series of lenses, can be placed over the lower Nicol prism when converging light is required, as in examining the uniaxial or biaxial interference figures of crystal sections. — **Reflecting microscope**, a form of microscope in which the object is placed outside of the tube, or outside the axis of the tube, and reflects its image to the speculum by means of a plane mirror inclined at an angle of 45° to the axis of

Petrographical or Polarization Microscope (after Rosenbusch), section at view.

f, fixed support in which the tube is moved by hand (coarse adjustment); *s*, screw of the fine adjustment; *p*, polarizer; *a*, analyzer in movable support turning on the graduated circle; *f*, *f*, *f*, *f*, condensing lenses; *s*, index for fixing position of rotating stage; *s*, quartz plate, which slides in nose piece above objective through slit at *f*, *f*, *f*, *f*, one of two screws for centering objective.

played comes from the sun, a lamp, and an oxyhydrogen flame-light respectively.

microscope-lamp (mī'krō-skōp-lamp), *n.* A special form of lantern, usually provided with a reflector, a bull's-eye lens, and a metallic chimney lined with some poor conductor of heat. Means are provided for adjusting the lamp in any position in order to throw the light upon the object under examination.

microscopic (mī'krō-skōp'ik), *a.* [*< F. microscopique* = Sp. Pg. It *microscopico*, < NL. *microscopicus*, < *microscopium*, microscope: see *microscope*.] 1. Pertaining to a microscope, or having its character or function; adapted to the purposes of a microscope, or to the inspection of minute objects: as, a *microscopic lens*, eyepiece, or stand; *microscopic sight* or vision.

Why has not man a microscopic eye?
For this plain reason, man is not a fly
Pope, *Essay on Man*, l. 193.

Such microscopic proof of skill and power
As hid from ages past, God now displays
Conger, *Tirocinium*, l. 637.

The present limit to microscopic vision is simply the goodness of the objective
Amer. Jour. Sci., 2d ser., XLVIII, 172.

2. Of minute size, so small as to be invisible or indistinct to the naked eye, adapted to or prepared for examination by the microscope as, *microscopic creatures* or particles, a *microscopic object* — 3. Made or effected by or as if by the aid of a microscope, hence, relating to things of minute size or significance; infinitesimal, petty as, *microscopic observations* or investigations, *microscopic criticism*.

So far as microscopic analysis would enable us to decide this question *Todd and Bowman*, *Physiol. Anat.*, II, 301.

4. Characteristic of the microscope or its use as, to observe anything with *microscopic minuteness*; *microscopic definition* of an object — 5. Employing or working with a microscope, or as if with a microscope.

The tree that has stood for centuries bears to the microscopic investigator marks of every winter that has passed over it
Stubbs, *Medieval and Modern Hist.*, p. 103.

Also *microscopical*.

Microscopica (mī'krō-skōp'ī-kā), *n. pl.* [NL., neut. pl. of *microscopicus* see *microscopic*.] In zool., microscopic animals, microzoans applied to infusorians, rotifers, and other animalcules.

microscopical (mī'krō-skōp'ī-kal), *a.* [*< microscopio* + *-al*.] Same as *microscopic*.

microscopically (mī'krō-skōp'ī-kal-ī), *adv.* [*< microscopical* + *-ly*.] In a microscopic manner or degree, by means of, or so as to require the use of, the microscope as, to examine a plant *microscopically*, an object *microscopically* small.

microscopist (mī'krō-skōp'ist), *n.* [*< F. microscopiste* = It *microscopista*, as *microscope* + *-ist*.] One skilled or versed in microscopy, one who makes use of the microscope.

Microscopium (mī'krō-skōp'ī-um), *n.* [NL., see *microscope*.] A constellation south of Capricorn, introduced by Lacaille in 1752.

microscopy (mī'krō-skōp'ī), *n.* [= F *microscopie* = Sp. *microscopia*; as *microscope* + *-y*.] The act or art of using the microscope, investigation with the microscope as, to be skilled in *microscopy*.

microsection (mī'krō-sek'shon), *n.* [*< Gr. μικρός*, small, + E *section*.] A slice, as of rock, cut so thin as to be more or less transparent, and mounted on a glass in convenient form to be studied with the aid of the microscope.

microseism (mī'krō-sīsm), *n.* [*< Gr. μικρός*, small, + *σεισμός*, a shaking.] A slight or weak earthquake-tremor.

We may feel sure that earth tremors or *microseisms* are not confined to countries habitually visited by the grosser sort of earthquake.
G. H. Darwin, *Pop. Sci. Mo.*, XXXI, 308.

microseismic (mī'krō-sīs'mik), *a.* [*< microseism* + *-ic*.] In *seismology*, of, pertaining to, or of the nature of *microseisms*, or very slight earthquake-tremors.

Should *microseismic* observation enable us to say where and where the minute movements of the soil will reach a head, a valuable contribution to the insurance of human safety in earthquake regions will have been attained
J. Múne, *Earthquakes*, p. 304.

microseismical (mī'krō-sīs'mi-kal), *a.* [*< microseismic* + *-al*.] *Microseismic*.

A series of *microseismical* observations.
J. Múne, *Earthquakes*, p. 316.

microseismograph (mī'krō-sīs'mō-grāf), *n.* [*< Gr. μικρός*, small, + *σεισμός*, a shaking, + *γράφειν*, write.] An instrument for measuring and recording very slight earthquake-shocks or earth-tremors.

microsismometry (mī'krō-sis-mom'et-ri), *n.* [*Gr. μικρός, small, + σεισμός, a shaking, + μέτρον, a measure.*] The measurement or observation of slight earth-tremors.

The account that is given of the labours of Italian observers in the field of *microsismometry* is meagre and unsatisfactory. *Nature*, XXXIX 338.

microseme (mī'krō-sēm), *a.* [*Gr. μικρός, small, + σήμα, mark, sign.* see *sema*] In *craniom*, having an orbital index below 84.

The skulls agree with the ordinary Bushman skull in most respects, being *microseme*. *A. Macalister, Jour Anthropol Inst*, XVI 150.

microseptum (mī'krō-sep'tum), *n.*, pl. *microsepta* (-tā). [*NL, < Gr. μικρός, small, + σέπτω, q v.*] A small imperfect or sterile septum or mesentery of an actinozoan. See *macroseptum*.

microsiphon (mī'krō-sī'fon), *n.* See *siphon* and *microsiphonula*.

microsiphonula (mī'krō-sī-fon'ū-lā), *n.*, pl. *microsiphonulae* (-lā). [*NL, < Gr. μικρός, small, + σίφων, a tube, pipe.* see *siphon*] The larval stage of certain cephalopods, as ammonoids, nautiloids, and belemnoids, during which the small tubular siphon or microsiphon makes its appearance. *Hyatt, Proc. Bost Soc Nat Hist*, 1887.

microsiphonular (mī'krō-sī-fon'ū-lār), *a.* [*Gr. μικρός, small, + σίφων, a tube, pipe.* see *siphon*] Of or pertaining to a microsiphonula.

microsiphonulate (mī'krō-sī-fon'ū-lāt), *a.* [*Gr. μικρός, small, + σίφων, a tube, pipe.* see *siphon*] Provided with or characterized by a microsiphon. *Amer Nat*, XXII 878.

microsiphonulation (mī'krō-sī-fon'ū-lā'shon), *n.* [*Gr. μικρός, small, + σίφων, a tube, pipe.* see *siphon*] The formation or the possession of a microsiphon, the state of being microsiphonulate. *Amer Nat*, XXII 878.

microsoma (mī'krō-sō'mā), *n.*, pl. *microsomata* (-mā-tā). [*NL, < Gr. μικρός, small, + σῶμα, body.*] A little body or corpuscle, one of the minute granules embedded in the hyaline plasma of the protoplasm of vegetable cells, and constituting an essential portion of its substance. These granules have a high degree of refringency, and are very deeply stained by hematoxylin.

microsome (mī'krō-sōm), *n.* [*NL, < Gr. μικρός, small, + σῶμα, body.* see *soma*] Same as *microsoma*. *Nature*, XXX 183.

microsomia (mī'krō-sō'mī-ā), *n.* [*NL, < Gr. μικρός, small, + σῶμα, body.* see *soma*] The state of being dwarfed, dwarfishness.

microsomite (mī'krō-sō'mīt), *n.* [*Gr. μικρός, small, + σῶμα, body.* see *soma*] One of the smaller permanent or definitive somites or metameres of which an animal body may be composed, a secondary segment, succeeding the primary segments or macrosomites.

microsomic (mī'krō-sō'mit'ik), *a.* [*Gr. μικρός, small, + σῶμα, body.* see *soma*] Having the character of a microsomite, relating to microsomites. *Amer Nat*, XXII 941.

microsomite (mī'krō-sō'mīt), *n.* [*Gr. μικρός, small, + σῶμα, body.* see *soma*] A mineral related in composition and form to nephelin. It is found in minute acicular hexagonal crystals in the lava of Monte Somma, Vesuvius.

Microsorex (mī'krō-sō'reks), *n.* [*NL, < Gr. μικρός, small, + L. sorex = Gr. ὕρξ, a shrew-mouse.*] A genus of very small North American shrews, of the family *Soricidae* and subfamily *Soricinae*, having 30 teeth. *S. hoyi* is the typical species. *Coues*, 1877.

microspectroscope (mī'krō-spek'trō-skōp), *n.* [*Gr. μικρός, small, + E. spectroscopy.*] A combination of the spectroscope with the microscope, by the use of which it is possible to examine the absorption-bands in minute quantities of a substance. The arrangement ordinarily employed consists of a series of glass prisms in a small tube which is attached above the achromatic eyepiece.

Microstema (mī'krō-spēr'mē), *n.* pl. [*NL, < Gr. μικρός, small, + E. stem, stem.*] A series of monocotyledonous plants, characterized by a perianth which is corolla-like, at least on the inside, by an inferior ovary which is one-celled with three parietal placentae, or rarely three-celled with axillary placentae, and by numerous very small seeds. The series embraces three orders, *Hydrocharitaceae* (the frog-bit family), *Burmanniaceae*, and *Orchidaceae* (the orchid family) including about 5,000 species, 5,000 of which belong to *Orchidaceae*.

Microsphaera (mī'krō-sfē'rā), *n.* [*NL, < Gr. μικρός, small, + σφαῖρα, a sphere.*] Agents of parasitic pyrenomycetous

fungi of the group *Erysiphaceae*. The perithecia, which contains several asci, has several appendages radiating from it like the spokes of a wheel. These appendages are free from the mycelium, and are more or less dichotomously branched at the tips, often in a very beautiful manner. About 50 species are known, of which nearly 20 occur in North America. *M. Ravenelii* is injurious to the honey locust (*Gleditsia*). *M. alni* (the *M. Prætorii* of authors) occurs on various species of *Ceanothus*, *Asplenium*, *Ulmus*, *Syringa*, *Platanus*, *Juglans* and *Carya*, and *M. quercina* is found on various species of oak. See *Erysiphaceae*.

microsporangiothore (mī'krō-spō-ran'jō-fōr), *n.* [*NL, < Gr. μικρός, small, + σπώρα, seed, + θήκη, a case.*] The foliage-leaves which surround or protect the spore-bearing leaves of certain hypothetical archaic cryptogams, and from which the flower of flowering plants may have been evolved.

The origin of this primeval flower from a somewhat fern like Cryptogam, of which the foliage leaves, the envelopes of the spore bearing leaves, the micro and macro sporangiothores had become permanently differentiated in ascending order. *Geddes, Encyc Brit*, XVI 846.

microsporangium (mī'krō-spō-ran'jū-m), *n.*, pl. *microsporangia* (-iā). [*NL, < Gr. μικρός, small, + σπώρα, seed, + σπώριον, q v.*] A sporangium containing microspores, the homologue of the pollen-sac in phanerogams.

microspore (mī'krō-spōr), *n.* [= *F. microspore*, *Gr. μικρός, small, + σπώρα, a seed.*] 1 In bot., an asexually produced spore of small size as compared with others produced by the same species, the homologue of the pollen-grain of phanerogams.

In some of the living club mosses there are two kinds of spores, one being much larger than the other. The larger are known as macrospores, whilst the smaller are called microspores. *Huxley, Physiology*, p. 241.

2 In coal, one of the spore-like elements, of exceedingly minute size, but very numerous, produced through the encystment and subsequent subdivision of many monads.

microsporine (mī'krō-spō-rin), *a.* [*Gr. μικρός, small, + σπώρα, seed.*] A genus or class of fungi producing various skin-diseases. *M. furfur*, which produces pityriasis versicolor, consists of hyphae having long articulations intermixed with round spores, and grows between the cells of the epidermis of feeding their rapid degeneration. *M. Audouinii*, so called, produces pelade another skin disease. According to Grunwitz, however, these forms as well as those described as *Achorion* the fungus of favus, and *Trichophyton*, the fungus of tinea, are all the same thing, only differing from one another in size. This difference is attributed to different ages in the food. The *M. diphthericum* of Klebs is a micrococci.

microsporophyll, **microsporophyll** (mī'krō-spō-rō-fil), *n.* [*Gr. μικρός, small, + σπώρα, seed, + φῶλλον, leaf.*] The leaf-bearing microsporangium of the heterosporous *Pteridophyta* the homologue of the stamen in phanerogams.

microsporous (mī'krō-spo-rus), *a.* [*Gr. μικρός, small, + σπώρα, seed.*] Resembling or derived from a microspore.

Microstema (mī'krō-sfē'rā), *n.* pl. [*NL, < Gr. μικρός, small, + σῶμα, strength.*] In J. D. Dana's classification, the third order of *Mammalia*, composed of the chiroptera, insectivores, rodents, and edentulates. The *Microstema* correspond to the *Insensentes* of Owen, and to the *Ineducabilis* series of placental mammals of Bonaparte and Gill.

microsthenes (mī'krō-sthēn), *n.* A member of the order *Microsthenia*.

microsthenic (mī'krō-sthēn'ik), *a.* [*Gr. μικρός, small, + σθένος, strength.*] Pertaining to or characteristic of the *Microsthenia*. *J. D. Dana, Cephalization*, p. 9.

Microstoma (mī'krō-tō-mā), *n.* [*NL, < Gr. μικρός, small, + στόμα, mouth.*] 1 In ichth., a genus of small-mouthed fishes, typifying the family *Microstomidae*, as *M. grandicauda* Cuvier, 1817—2. In *Vermes*, the typical genus of *Microstomidae*. *M. lineare* is an example. Also *Microstomum*.

microstome (mī'krō-stōm), *n.* [*Gr. μικρός, small, + στόμα, a mouth.*] In bot., a small mouth or orifice, as that belonging to the capsule of certain mosses.

Microstomidae (mī'krō-stōm'ī-dē), *n.* pl. [*NL, < Gr. μικρός, small, + στόμα, a mouth.*] 1 In ichth., a family of malacopterygian fishes, typified by the genus *Microstoma*, containing a few deep-sea fishes related to the argenteines and smelts. Also *Microstomatidae*.—2 A family of rhabdocelous turbellarians, typified by the

genus *Microstoma*, having a small extensile mouth near the anterior end of the body, together with laterally ciliated pits. These turbellarians are more remarkably characterized by the separation of the sexes hermaphroditism being the rule in the *Rhabdocela*. They multiply both by ova and by spontaneous fission.

microstructure (mī'krō-strūkt'ūr), *n.* [*Gr. μικρός, small, + σῶμα, body.* see *microscopic*, + *E. structure*] Microscopic structure.

This rock has a microstructure very similar to that of many andesites. *Quart Jour Geol Soc*, XLV 198.

microstylar (mī'krō-stī-lār), *a.* [*Gr. μικρός, small, + στυλός, pillar.* (see *style*), + *-ar*] In arch., having, pertaining to, or consisting of a small style or column.

Microstylis (mī'krō-stī-lis), *n.* [*NL, < Gr. μικρός, small, + στυλός, dim of στυλός, a pillar.* see *style*] A genus of terrestrial orchids of the tribe *Epulidrea* and the subtribe *Malaxaceae*, characterized by a stem bearing from one to three leaves, and by the new shoots arising from the base of the bulb of the previous year. They are small herbs with broad membranaceous leaves, which are contracted into a sheath or a sheathing petiole, and small, often greenish or yellowish flowers, which grow in terminal racemes. About 45 species are known, which are indigenous to Europe, Asia, and North and South America. *M. ophioglossoides* is the United States, bears the name of *adder's mouth*, which is also extended to the other species. See *adder's mouth*.

microstylospore (mī'krō-stī-lō-spōr), *n.* [*Gr. μικρός, small, + στυλός, a pillar, + σπώρα, a seed.* see *stylospore*] A stylospore of small size as compared with others produced in the same species.

microstylous (mī'krō-stī-lus), *a.* [*Gr. μικρός, small, + στυλός, a pillar.* see *style*] In bot., having the style small or short and associated with long stamens, as compared with long styles associated with short stamens.

microtasmeter (mī'krō-tā-sm'et-er), *n.* [*Gr. μικρός, small, + E. tasmeter.*] An instrument invented by Edison for detecting and measuring very slight pressures. A rigid iron frame holds a carbon button which is placed between two surfaces of platinum, one stationary and the other movable, and in a device which holds the object to be tested so that, as the object expands, the pressure resulting from the expansion acts upon the carbon button.

microtelephone (mī'krō-tē-lē-fōn), *n.* [*Gr. μικρός, small, + E. telephone.*] A telephone capable of rendering audible very weak sounds.

microtelephonic (mī'krō-tē-lē-fōn'ik), *a.* [*Gr. μικρός, small, + E. telephone.*] Pertaining to the microtelephone.

Microtherium (mī'krō-thē-rī-um), *n.* [*NL, < Gr. μικρός, small, + θήρ, wild beast.*] A genus of artiodactyl ungulate mammals established by Von Meyer upon remains discovered in the Miocene of Europe. The position of the genus is questionable. Owen considered it related to the chevrotains (*Tragulidae*). It probably belongs to the anoplotheriid series. It is also called *Amphimeryx*.

microtherm (mī'krō-thēr-m), *n.* [*Gr. μικρός, small, + θερμός, heat.*] A plant of Alphonse de Candolle's fourth physiological group, consisting of those forms which are confined to climates whose mean annual temperature is between 14° and 0° C. They are found on the plains of the north temperate zone in Europe, Asia and North America well northward, and in South America between latitudes 38 and 60° S.

microtome (mī'krō-tōm), *n.* [*Gr. μικρός, small, + τομή, a cutting.*] An instrument for making very fine sections or thin slices of objects for microscopic examination.

microtomic (mī'krō-tōm'ik), *a.* [*Gr. μικρός, small, + E. tomia.*] Cutting in fine or thin slices, relating to the use of the microtome or to microtomy.

microtomical (mī'krō-tōm'ī-kal), *a.* [*Gr. μικρός, small, + E. tomia.*] Same as *microtomic*. *Amer Nat*, XXI 110.

microtomist (mī'krō-tōm'ist), *n.* [*Gr. μικρός, small, + E. tomia.*] One who is expert in the use of a microtome. *Microscopist*, XXX.

microtomy (mī'krō-tōm'ī), *n.* [*Gr. μικρός, small, + τομή, a cutting.*] The art of preparing thin slices of tissues, in order to study the histological details of organization.

microvolt (mī'krō-vōlt), *n.* [*Gr. μικρός, small, + E. volt.*] A millionth part of a volt.

Microzoa (mī'krō-zō-ā), *n.* pl. [*NL, < Gr. μικρός, small, + ζῷον, animal.*] Microscopic animals, or *Microscopica*, *Microzoaria*.

microzoal (mī'krō-zō-āl), *a.* [*Gr. μικρός, small, + E. zoa.*] Of or pertaining to the *Microzoa*.

3 In *gram* (a) Intermediate between active and passive applied to a body of verb-forms of which the office is more or less distinctly reflexive, or denotes the subject as acting on or for or with reference to itself, often answering to an English intransitive verb. as, *middell* voice, *middell* ending, *middell* tense. Such forms, distinguished by their endings, belonged to the original Indo-European verb, and are retained by some of the extant languages, especially Sanskrit and Greek. In Greek the middle voice (ἡ μέση διαθεσις, μέσος) serves also as passive, except in the future and aorist. (b) Intermediate between smooth (unspirated) and rough (aspirated) as, a *middell* (medial) mute. See *mute* 1, n. — *Middell* ages. See *age*. — *Middell* books, a course of study intermediate between the Elements of Euclid and the Almagest of Ptolemy. — *Middell* C. See *C*. — *Middell* chest. See *chest*. — *Middell* class, that class of the people which is socially and conventionally intermediate between the aristocratic class, or nobility, and the laboring class, the untitled community of well born or wealthy people, made up of landed proprietors, professional men, and merchants in Great Britain commonly subdivided into upper and lower middle classes. In the United States no class-distinction of this nature exists

He [Pitt] looked for support not to a strong aristocratic connection, not to the personal favour of the sovereign, but to the middle class of Englishmen
Macaulay, William Pitt, Earl of Chatham

See *fallacy*. — **Middell of the road**, an epithet applied, especially in the presidential campaign of 1896, to those members of the Populist party who urged the nomination of a Populist by their party convention and opposed the acceptance of the nominee of the Democratic party said to be derived from the habit, in some parts of the Southwest, of keeping in the middle of the road, the better to protect one's self from enemies lying in ambush. [U S. political slang]. — **The principle of excluded middle** or *third*, one of the properties of negation, according to which there is no individual that is not included either under any given term or under its negative. It may also be stated by saying that the negative of the negative of any term is included under that term. The converse statement that the negative of the negative of any term includes that term is the principle of *contradictum*. These two principles, taken together, define negation

— **Figy. 1. Center, Middell, Middell**. *Center* is a precise word, ordinarily applied to circular, globular, or regular bodies as, the center of a circle, globe, field, but it is used whenever a similar exactness appears to exist as, the center of a crowd. *Middell* regards the person or thing as enveloped or surrounded on all sides, especially by that which is close upon him or it, thick or dense as, in the *middell* of the forest, the waves, troubles, one's thoughts. Except as thus modified by the idea of envelopment or close environment, the old idea of *middell* as meaning the middle point (see Gen 1 6, Josh vii 21, 1 Ki xlii 85) is quite obsolete. *Middell* is very often used abstractly or figuratively, *center* rarely, *middell* never. *Middell* is often applied to extent in only one direction as, the *middell* of the street, of a block of houses, of a string. It is often less precise than *center* compare the *center* and the *middell* of a room.

In their midst a form was seen
Montgomery

That in their midst, in our midst, &c. are at odds with the "genius" of our language is an assertion somewhat adventurous. As concerns a substantive, its subjective genitive universally, and its objective genitive, very often, may be expressed prepositively. Love of God, intending 'love emanating from God,' may be exchanged for God's love but we also say, *Plato's commentators*, and the world's end. To come to possessive pronouns, we have no scruples about the objective *do* *his pleasure*, *any thy praise*, *in my absence*, *on your account*, *to their discredit*, *in our de spite*, *his equal*, &c., &c., and with these phrases in our midst is rigidly comparable. With reference to analogical principles in our midst is altogether irreproachable

= *Syn. Migrate, Emigrate, Immigrate* To *migrate* is to change one's abode, especially to a distance or to another country, emphasis being laid upon the change, but not upon the place of departure or that of stopping, and the stay being generally not permanent. *Emigrate*, to migrate from, views the person as leaving his previous abode and making a new home, *immigrate*, to migrate into, views him as coming to the new place. The Arab *migrates*, the European coming to America is an *emigrant* to those whom he leaves, and an *immigrant* to the Americans. *Migrate* is applicable to animals the other terms are generally used of the movements of men

migration (mi-grä'shon), *n* [*< F migration = Pg migração = It migrazione, < L migratio(n)-, < migrare, pp migratus, migrate see migrate*]

1 The act of migrating, change of residence or habitat, removal or transit from one locality or latitude to another, especially at a distance. Among animals, the most extensive and regular migrations are performed by birds during spring and fall, and in a general way along meridians of longitude, the vernal migration being northward, the autumnal southward. This is ordinary or equatorial migration. In cold and temperate latitudes of the northern hemisphere nearly all insectivorous birds perform migration. Some, as sandpipers, which breed only in high latitudes, may be dispersed during their migration over a great part of the world. Others, as swallows, are noted not only for the extent but for the rapidity and regularity of their movements, their arrival and departure being capable of prediction with considerable accuracy. The migration of many water fowls is scarcely less notable in the same respects. Migration seems to be determined, primarily and chiefly, by conditions of food-supply, but this does not fully account for the apparently needless extent and the wonderful periodicity of the movement, nor for the fact that individuals sometimes return to exactly the same spot to breed again, after passing the winter perhaps thousands of miles away. Migrations of mammals are more irregular than those of birds, less definitely related to latitude and longitude, and more obviously dependent upon food supply. Such are the excursions, often in enormous hordes, of various arctic animals, as lemmings and other rodents, reindeer, musk-oxen, foxes, etc. Such movements do not appear to be specially related to reproduction. Many fishes migrate from and back to the sea, ascending rivers to spawn, as is notably the case with anadromous fishes of the salmon and herring families, with eels the case is reversed, with many fishes the catadromous migration is between deeper and shallower, or colder and warmer, salt water. Periodical migration is also marked with certain insects. Thus, *Anomia placidus*, the milkweed-butterfly, migrates southward in the fall to hibernate in the pine woods of

the southern United States. The faculty which enables or compels animals to migrate has been named the "instinct of migration", but the phrase is rather a statement of fact than an explanation of the phenomenon, except in so far as this instinct may be regarded as originating in and being highly developed from the simple necessity of moving about to secure food.

All our adventures were by the fireside, and all our migrations from the blue bed to the brown.

Goldsmith, Vicar

Bathic migration, migration of fishes from one depth of water to another, vertical or altitudinal change of habitat in the sea distinguished from equatorial migration

The fishes of any region may find water of suitable warmth by moving north or south along the shores of the continent, or by changing to waters of less or greater depth. The former may be called equatorial, the latter bathic migration. Bathic migration is the most common. Goode, Menhaden

Mikani, a Bohemian botanist (1709-1844)] A genus of composite plants of the suborder *Tubuliflorae*, the tribe *Lupatoriacae*, and the subtribe *Agerateae*. The principal characteristics are an involucre of four slightly unequal bracts, four flowered heads which are racemed or panicle, and pappus with very numerous scabrous bristles arranged in one row. The plants are shrubs or herbs, which are almost always climbing or twining, with opposite leaves, and small white, flesh-colored, or pale yellowish heads. About 140 species have been enumerated, but they may probably be reduced to 100. They are natives of the warmer parts of America, with the exception of one species, which is found in Asia and tropical Africa. *M. scandens*, the climbing hempweed, is a high twiner, with cordate somewhat deltoid or hastate leaves and heads of pale flesh colored flowers in dense cymes, climbing over copse along streams. It ranges through the eastern and southern United States into Mexico and to Brazil. *M. Guaiac* is one of the guaco plants of tropical America.

a white frost-like down, or in spots or with various discolorations. The name is more properly restricted to the *Erysiphaceae*, or powdery mildews, and the *Peronosporaceae*, or downy mildews. The *Uredineae*, of which *Puccinia graminis*, the corn mildew of England, is the type, are more properly rusts. (See **rust**, **Uredineae**.) The mildews are among the most destructive fungi known. *Peronospora viticola* is the very destructive American downy mildew of the grape, and *Uromyces campylopus* of which the so-called **Oidium Tuckeri** is the conical form, is the powdery mildew of the grape. *Phytophthora infestans* is the downy mildew of the potato, causing the disease known as **potato rot**. *Erysiphe communis* is a very common mildew on various *Leguminosae*, *Ranunculaceae*, etc. The so-called mildew of linen is produced by a species of *Cladophorium*. See *Cladophorium*, *Erysiphaceae*, *Peronospora*.

The ordinary or statute mile is equal to 8 furlongs = 320 perches or poles = 1,760 yards = 5,280 feet, it was rendered legal by a statute of the thirty-fifth year of Elizabeth's reign, which prohibited building within three miles of London. This mile was probably intended to be about the length of a minute on the earth's surface, but the perch of which it is an exact multiple, already existed. The square mile is 640 square chains or 640 acres. The nautical or geographical mile has been variously defined see phrase below. The medieval English mile (divided into 10 furlongs) was equal to 5,610 feet or 2,015 meters. The old London mile was 5,000 feet. The miles of continental Europe were of the most various lengths, and mostly represented, as it would seem, multiples of some modified Roman mile. The ancient Scottish mile was 1,976 yards = 1 1/2 English miles, the Irish mile, 2,240 yards = 1 3/4 English miles (11 Irish miles being 14 English miles). The Welsh mile was nearly

4 miles English. The following table shows the values of some of the principal miles in meters

Robin Hood's Birth (Child's Ballads, V 349).

Geographical or nautical mile, a mile variously defined as (1) the mean length of a minute of latitude = 6,082.06 feet, (2) the length of a minute of the meridian corresponding to the radius of curvature of the particular latitude, varying from 6,045.95 feet at the equator to 6,107.85 feet at the poles, and (3) the length of a minute of longitude on the equator = 6,087.15 feet. To remove all uncertainty, the United States Coast Survey has adopted the value of the nautical mile as equal to one sixtieth part of the length of a degree on the great circle of a sphere whose surface is equal to the surface of the earth. This value gives one nautical mile = 6,080.27 feet, which is very nearly the value of the Admiralty knot (6,080 feet) adopted by the British Hydrographic Office.—**Three-mile limit, belt, or zone** (also called the *marine belt*), in international law, that part of the margin of the high seas which is within the jurisdiction of the nation possessing the coast, originally determined by the circumstance that, at the time this limit became generally recognized, a marine league approximated fairly to the distance at which cannon on the shore would serve to command the water. 1 Whart. Milium (mil'i-um), *n* [*NL* (Tournefort, 1700), < *L. milium*, millet: see *milk*] 1 A genus of grasses of the tribe *Agrostideæ* and the subtribe *Stipeæ*, characterized by an ovoid glume, rigid or hardened about the caryopsis, and an awnless flowering glume. They are annuals or perennials, with flat leaves and a compound panicle of one flowered spikelets. There are 5 or 6 species, natives of Europe, temperate Asia, and North America. The genus bears the common name of *millet grass*. *M. effusum*, widely spread through the northern hemisphere, is a tall handsome grass which thrives in dense shade. Its herbage is relished by cattle, and its seed by birds.

They have the seed of *Milium* in great abundance

It is characterized by having the outside petals small, and the interior ones much larger, flat, and converging at the apex. Seven or eight species are known, natives of eastern India, and perhaps of Australia. They are low or medium sized trees, with flowers almost always axillary, either solitary or in clusters, and with the petals often transparent.

It is opaque, with a slight peculiar odor and a bland sweetish taste. Its chemical constituents in different mammals are qualitatively alike, but quantitatively vary much, not only in different species, but also in different individuals, or even at different times in the same individual. The amount of water varies from about 80 to 90 per cent, the residue being composed of albuminoids (casein and lactoprotein), fat, milk sugar, and certain salts (chiefly phosphates). Under the microscope it appears as a clear transparent fluid, in which a large number of minute globules are suspended. When allowed to rest, these globules rise to the surface, forming a yellowish stratum, the cream, which consists mainly of the fat, mixed with some casein and retaining some serum. In the cow about 5 per cent of the milk is cream, in the human female less, in the mare scarcely more than 1 per cent. By churning, the globules unite to form butter, leaving the buttermilk, which is essentially a solution of milk sugar, with the salts and some casein and butter. The milk from which cream is separated is *skimmed milk*, which when left to itself (if not too cold) develops, from the action of a certain bacterium, lactic acid, which separates the casein in a coagulated condition called *curd*; the same effect is produced by some other acids and by rennet, the prepared inner membrane of the stomach of a calf. The liquid separated from the coagulum is called *whey*, and contains chiefly

milk-sugar and some salts. Cheese is prepared by coagulating milk with rennet, allowing the whey to separate, and adding salt to the curd. The specific gravity of both cows and human milk is about 1.030. Human milk is always alkaline, cow's milk either alkaline or acid, while the milk of carnivora is always acid. Milk represents a complete or typical food, in which all the constituents necessary for maintaining the life and growth of the body are present. In rare instances milk, in greater or less abundance, is secreted by the mammary glands of the adult human male.

1 A mechanical device for grinding grain for food. Ancient mills, and those still in use in uncivilized or half-civilized countries, are simple devices for rubbing or pounding the grain, commonly two stones, one of which is moved upon the other by hand. The common modern mill consists essentially of two flat circular stones, one of which is moved upon the other, and between which the grain is triturated. The bedstone and runner are together called a *run of stones*. In some mills the under stone is the runner. Such a mill is called an "under runner," while an "upper runner" is one like that shown in the cut. The bush, *g*, in the bedstone, is fastened in its place by wedges. The balance-rynd is a curved bar which crosses the eye, or central opening of the runner on the under side at the margin of the eye and supports the stone. The supporting bearing of the balance-rynd is a central socket called a *rock eye*, and the supporting point of the spindle which fits the cockeye is called the *cockhead*. The spindle, balance-rynd, and runner stone are raised or lowered by means of the bridge tree and lighter screw to adjust the runner properly in relation to the bedstone. The hopper, *p*, receives the grain to be ground and delivers it to the shoe, which is loosely supported and kept constantly vibrating by the rotation of the damel, a sort of trundle wheel, the trundles of which chatter against the shoe. Flour is also made by cylinder mills or roller mills. The rollers act by crushing, by crushing and rubbing, as when they are caused to run with different peripheral velocities, or by a cutting or scraping action, as when they are serrated and revolved in such manner that the cutting edges

2 A machine for grinding or pulverizing any solid substance. The word in this use is generally in composition with a word denoting the purpose for which the mill is designed as, *pearl mill*, *quartz mill*, *coffee mill*

One could see by the way he ground the coffee in the mill nailed to the wall that he was reckless of the results
W M Baker, New Timothy, p 294

3 A machine which transforms raw material by a process other than grinding into forms fit for uses to which the raw material is unfitted. In this use also the word is generally in composition, as

saw-mill, planing mill, etc. This use of the word is, however, limited and arbitrary, many machines which transform raw materials not being called mills.

4. A machine which does its work by rotary motion, especially a lapidary wheel.—5. A treadmill. [Colloq.]

A few weeks after I was grabbed for this, and got a month at the mill, but I was quite innocent of priggish. Quoted in *Mayhew's* London Labour and London Poor, I 390

6 (a) A building in which grinding is done, often in composition as, a flour-mill, water-mill, windmill, etc. (b) In metal, any establishment in which metalliferous ores are treated in the moist way, as by stamping and amalgamating, by grinding in pans, or by similar methods. Those works in which the reduction is performed by the aid of fire are usually designated *smelting works*, or sometimes (especially in the case of iron) *furnaces*. In the manufacture of iron a *mill* is an establishment where the metal in the rougher form (that is, in that of blooms, slabs, rough bars, etc.) is worked up into various kinds of merchantable iron, or into those forms which are desired by the different classes of consumers of the metal, such as rails, plates, merchant bars, and many other similar products. (c) A large building used as a factory, and occupied by machinery for the purposes of manufacture as, a silk-mill, a cotton-mill.—7 In *calico-printing* or *bank-note engraving*, a soft steel roller which receives under great pressure an impressed design in relief from a hardened steel engraved roll or die, and which is used in turn, after being hardened, to impart the design in intaglio to a calico-printing roll or note-printing plate.—8 [Cf *mill*, v, 1] A snuff-box. 9 A kind of screw-press introduced during the reign of Elizabeth into England from France, and designed to supersede the manufacture of gold coins by the primitive method of striking dies with a hammer. It was introduced in 1561, discontinued in 1572, reintroduced in 1656 and 1658, and permanently adopted shortly after the restoration of Charles II. The more modern coining press has supplanted this machine. The mill not only struck the legend, but also raised the rim on the margin and serrated the edge. These serrations were at first straight but, having been found easy to imitate by filing, they were made curvilinear in the reign of George II.

Barker's mill, an ingenious machine, moved by the centrifugal force of water, invented by Dr Barker. It consists of a vertical axis *CD*, moving on a pivot at *D*, and carrying the upper millstone *m*, after passing through an opening in the fixed millstone *n*. Upon this vertical axis is fixed a vertical tube *TT*, communicating with a horizontal tube *AB* at the extremities of which, *A* and *B*, are two apertures in opposite directions. When water from the mill course *MN* is introduced into the tube *TT*, it flows out of the apertures *A* and *B*, and by the pressure of the water on the parts of the tube opposite the apertures the arm *AB* and consequently the whole machine, is put in motion. The bridge *ab* is elevated or depressed by turning the nut *c* at the end of the lever *cb*. The grain to be ground is poured into the hopper *H*. As modified by Whitelaw it is used in Great Britain under the name of *Scotch turbine*. See *turbine*.—**Cannon-ball mill**. See *cannon ball*.—**Chilian mill**, a form of mill consisting of two heavy wheels or rollers, set parallel on a horizontal shaft, and having a double rotation, that on the horizontal shaft, and a second around a vertical axis controlling the horizontal shaft. The rollers travel in a vat or other suitable receptacle, and scrapers are usually provided to keep the material in the path of the wheels. This form of mill, which is of much antiquity, is now used especially for grinding oleaginous seeds, nuts, fruits, etc. See *arrastre*.—**Cone-and-cradle mill**, a mill having a conical muller or grinder reciprocating in a semi-cylindrical concave or bed. *E. H. Knight*.—**Crooke's mill**, an occasional name for Crooke's radiometer (which see, under *radiometer*).—**Edge-runner mill**, a mill in which the millstones grind by their peripheral surfaces instead of by their flat surfaces. The stones are generally two in number (though a single one is sometimes used), and run in a circular trough provided with a bottom of stone or of iron. The trough holds the material to be ground. The stones are pivoted to the ends of an axle like cart wheels, and the axle is attached in the middle to a vertical shaft which rolls the stones around in the trough,

Barker's Mill

thus effecting both a rolling and a rubbing action upon the material to be ground. Such mills are used for grinding flaxseed preparatory to expressing the oil, in ironfoundries for grinding sand and clay, and for other purposes.—**Horizontal mill**, a mill having the acting surfaces in a horizontal plane, at right angles to the vertical axis of the revolving stones, as in a grain grinding mill.—**Hydraulic, lapidary, etc., mill**. See the adjectives.—**Levitating mill**. See *levigate*.—**Mouse mill**, a combined electromagnetic engine and induction electrical machine used for feeding forward the paper record ribbon, and for electrifying the ink, in Thomson's siphon recorder for submarine telegraphy.—**Revolving mill**, a form of Chilian mill in which the pan turns while the axis of the rollers does not change its position, a revolving-pan mill.—**To bring grist to the mill**. See *grist*.—**To go through the mill**. See *go*.

mill¹ (mil), v [Cf *mill*¹, n] I. *trans* 1 To grind in a mill, grind, reduce to fine particles or to small pieces by grinding or other means. See *milling*.

2 To subject to the mechanical operations carried on in a mill, as a saw-mill or planing-mill; shape or finish by machinery. Specifically, in *ceram*, to prepare (the clay) by passing it through a mill, which is usually of the form of an inverted cone, in the center of which is a vertical shaft set with knives. The clay, being thrown in at the top, is kneaded, cut, and pressed by the revolution of the shaft, and when it emerges from the bottom is plastic and ready for molding. See *pug mill*.

3 To cut (metal) with a milling-tool in a milling-machine.—4 To turn or upset the edge of (a coin) so as to produce a marginal ridge or flange on both sides, upon which, when laid flat, the coin rests, thus protecting the design which is inside of the flange from wear, and enabling the coins to lie firmly when piled together one upon another.—5 To flute the edge of, as of a coin, or of any flat piece of metal, as the head of a milled screw or the rim of a metal box-cover, to afford a hold for the fingers. The screws of optical and surgical instruments, and other philosophical apparatus, and also the covers of lubricators for machinery, are commonly milled.

Wood's halfpence are not milled, and therefore more easily counterfeited

See *lead*.—**Milled money**, coins struck in a mill or coining-press, as distinguished from those produced from a die by striking it with a hammer. See *hammered money* (under *hammer*) and compare *coining press*. (Milled money was invented by Antoine Brucher in France, and the first was so struck in that country about 1563. Elizabeth of England coined milled money from about 1562 to 1572, when the use of the mill was discontinued, on account of its expense, till about 1654. After 1662 it remained completely established, on account of many advantages which more than compensated for the cost. It seems that they [milled shillings] were sometimes kept as counters. *Nares*.)

millenarian (mil-e-nā'ri-an), a and n [Some-

times improp *millennarian*, < *millenary* + -an.]

I a Relating or pertaining to a thousand, specifically to an expected millennial period of righteousness on earth, chiliastic. as, *millenarian speculations*.

II. n One who believes in the millennium; more specifically, one who believes that Christ will visibly reign on earth with his saints for a thousand years or for an indefinite period of time before the end of the world; a chiliast. See *millennium*.

millenarianism (mil-e-nā'ri-an-izm), n. [Sometimes improp *millennarianism*; < *millenarian* + -ism] The doctrine of or belief in the coming of the millennium, the doctrine of the reappearance of Christ on earth, the establishment of his kingdom, the resurrection of the saints and of the remaining dead for the general judgment, and an intervening period of a thousand years (or of indefinite length) of perfect righteousness. In the early church the doctrine of millenarianism (chiliasm) was generally held, and many, both of the otherwise orthodox and of heretics, were accused of holding it in a literal or even a gross and sensual sense. Thus, after the fourth century it fell into general disfavor. As a d 1000 approached there was a wide-spread panic throughout Europe, under the idea that the prophetic thousand years had expired and that Satan would be let loose. Millenarianism showed itself again in the views of Anabaptists, Fifth Monarchy Men, Millerites, etc. See *chiliasm*, *millennium*, *premillennialism*, *postmillennialism*.

At various periods in the history of the Middle Ages we encounter sudden outbreaks of *millenarianism*.

millennium (mi-len'ī-um), *n.* [= *F. millénium = Sp. milenio = Pg. millenio, < NL. millennium, < L. mille*, a thousand, + *annus*, year see *annual*.] 1. An aggregate of a thousand years; a period or interval of one thousand years as, the millennium of the occupation of Iceland celebrated in 1874
To us nothing seems more unlikely, more inconceivable, than two millenniums of high Egyptian civilization, while all the rest of the world was sunk in darkness
G. Rawlinson, Origin of Nations, I 151
Specifically—2. In *theol.*, a period during which the kingdom of Christ will be established upon the earth and will predominate over all other authority The phrase "a thousand years," in Rev. xx. 1-6, has been understood literally, or (on the principle that in Scripture prophecies a day stands for a year, and the Jewish year contained 360 days) as representing 360,000 years It is generally regarded as indicating an indefinite but long period, and belief in such a period is universal in the Christian church But whether this predominance of the kingdom of Christ will be accomplished gradually by the gospel, and will precede Christ's second coming, or will follow his second coming and be accomplished by it, is disputed This question divides theologians into two schools, the postmillenarians, who hold the former view, and the premillenarians, who hold the latter, while many hold that the millennium represents the gospel dispensation or reign of the church, and has accordingly already prevailed for many centuries.

miliped, **miliped** (mil'e-ped, mil'i-ped), *n.* [= *F. millepède = Sp. milpíes = Pg. millepedes = It. millepiedi, < L. millepeda, < mille*, thousand, + *pes* (ped-) = *E. foot*.] 1. A thousand-legs; a myriapod of the suborder *Chilognatha* or *Diplopoda*; so called from the very numerous feet, though these are not nearly a thousand in number The feet are about twice as numerous as those of the similar creatures called *centipede*, there being two

pairs instead of one pair to most of the segments, the legs are also shorter, and the body is harder and more cylindrical. Milipedes are found in water, and in wet or damp places beneath logs, stones, etc. Unlike some of the centipede, all are quite harmless animals. Some of the commonest belong to the family *Silvidae*, as *Julus sabulosus*. The tufted milipedes are *Polydesmidae*, the false milipedes, *Polydesmidae*. Mill-milipedes belong to the family *Glomeridae*, they are comparatively short and stout and can roll themselves up into a ball, like the wood lice of the genus *Armadillo*. See *Chilognatha*, and cuts under *Myriapoda* and *thousand legs*.
2. Some small crustacean with many legs, as an isopodous slater; a wood-louse
Also *millepede*, *millipede*.

Milipora (mi-lep'ō-rā), *n.* [*< NL. see millepore.*] The typical genus of the family *Miliporidae*, so called from the numerous pores upon the surface. These are the openings of as many tubular cells or cavities which traverse the hard coralline substance, and are themselves divided in the deeper parts by close set transverse partitions or tabular dissepiments, vertical septa being rudimentary or absent.

Milipora alcorni

millepore (mil'e-pōr), *n.* [= *F. millepore = Sp. milépore = It. milépore, < NL. Milépore, < L. mille*, a thousand, + *porus*, a passage see *pore*.] A coralline hydrozoan of the family *Miliporidae*. The millepores were long supposed to be corals, and such is their appearance and the part they play in the formation of reefs. They belong, however, to a different class of animals, the *Hydrozoa* (not *Actinozoa*), being among the few members of their class which form a hard calcareous polypary or polypidom like the stone corals, and the leading representatives of the order called *Hydrocorallina* (which see). The incrusting substance forms a dense deposit upon the outer surface of the ramified hydrosome. There are two kinds of zooids or polypites short broad alimentary zooids (gastrozooids) with 4 or 6 tentacles, surrounded each by a zone of from 5 to 20 or more long mouthless zooids (dactylozooids) with numerous tentacles, having no ampullae. The zooids are dilated at their bases, and there give off tubular processes which ramify and inosculate, giving rise to a thin hydrosome.
Miliporidae (mil'e-pōr'ī-dē), *n. pl.* [*< NL. < Milépore + -ada*.] A family of hydrocoralline hydrozoans, typified by the genus *Milipora*. See *millepore* and *Hydrocorallina*.
milleporiform (mil'e-pōr'ī-fōrm), *a.* [*< NL. Milépore + L. forma*, form.] Having the form or appearance of a millepore, milleporine.
Miliporina (mi-lep'ō-rī-nā), *n. pl.* [*< NL. < Milépore + -ina*.] Same as *Miliporidae*.
milleporine (mil'e-pō-rīn), *a.* Pertaining to the *Miliporidae*, or having their characters, resembling a millepore, milleporiform.
milleporite (mil'e-pōr-īt), *n.* [*< millepore + -ite*.] A fossil millepore.
miller (mil'ēr), *n.* [*< ME. miller, meller, millere, melle, earlier myllere, myllere, milnere* (a form remaining in the surname *Mulner*), *< AS. *mylnere* (not recorded, another term was *mylnweard*, 'mill-ward') = *OS. mulnere* = *Fries. meller* = *D. mulder, molenaar* = *MLG. molner, molre, molter* = *OHG. mulnari, MLG. mulnære, mulner, G. muller* (as a surname also *Mulner*) = *Ice. mylnari* = *Sw. mjolnari* = *Dan. moller*, *< LL. molinarus*, a miller, *< molina*, a mill see *mill¹*, *n.*] 1. One who grinds grain in a mill, one who keeps or who attends to a mill, especially a grain-mill.
More water glideth by the mill
Than wots the miller of
Shak., Tit. And., II. 1. 87
2. A milling-machine—3. A moth whose wings appear as if dusted over with flour or meal, like a miller's clothes, hence, almost any small moth, such as fly about lights at night. Common millers in the United States are *Spilonoma virginica*, a moth whose larva is one of the woolly bear caterpillars, and *Hyphantria cunea*, the web worm moth. The little yellowish moths of the genera *Crambus* and *Bote* are also commonly called millers. See cuts under *Crambus* and *Hyphantria*.
4. A fish, the eagle-ray, *Myliobatis aquila*, a mill-skate—5. The hen-harrier, *Circus cyaneus* [Prov. Eng.]—6. A young flycatcher (*Suainson, Brit. Birds*, 1885, p. 49 [Local, Eng.]—*Cross miller*. See *cross¹*, *n.*
millering (mil'ēr-ing), *n.* [*< miller + -ing*.] The dust of a flour-mill.
And she would meal you with millering
That she gathers at the mill

Millerite (mil'ēr-īt), *n.* [*< Miller* (see def.) + *-ite*.] A disciple of the American William Miller, who from 1833 till his death in 1849 publicly interpreted the Scriptures as fixing the second advent of Christ and the beginning of the millennium in the immediate future (at first about 1843). His followers form a still existing denomination of Adventists.
millerite (mil'ēr-īt), *n.* [Named after W. H. Miller (died 1880), an English crystallographer.] Native nickel sulphide, a mineral having a bronze color and metallic luster, often occurring in tufts of capillary crystals, and hence called *hair-pyrites*, *capillary pyrites*. It is found also in incrustations with fibrous or radiated structure, in the latter form it is a valuable nickel ore.
miller's coat (mil'ēr's-kōt), *n.* A coat of fence in use in the sixteenth century, apparently a buff-coat or similar defense of leather.
miller's dog (mil'ēr's-dog), *n.* A kind of shark or dogfish, *Galeus canis*.

millesimal (mi-lez'ī-mul), *a.* [= *F. millesimo = Sp. milésimo = Pg. It. millesimo, < L. millesimus*, the thousandth, *< mille*, a thousand see *mill²*.] Thousandth, consisting of thousandth parts as, millesimal fractions.
millet (mil'ēt), *n.* [*< F. millet, millet, dim. of mil, millet see mill³*.] 1. A cereal grass, *Panicum miltarum*, known from antiquity, and still cultivated in the East and in southern and central Europe. It is an annual, from 2 to 4 feet high, with profuse foliage, the flowers abundant, in open nodding panicles. The grain is one of the best for fowls and affords a nutritious and palatable table food. As cultivated in the United States, it is mostly used for fodder, and elsewhere it is less sown than formerly.
2. One of several other grasses generally with a prolixed descriptive. See below—**Arabian** or **evergreen millet**, a variety of Indian millet [Local, U. S.]—**Cat-tail**, **East Indian**, **Egyptian**, **pearl millet**, in the southern United States, a tall grass *Pennisetum spatum*, there cultivated as a forage plant. In India it serves as a cereal—**German**, **Hungarian millet**. See *Italian millet*—**Indian millet**, **African millet**, a stout cereal grass commonly known as *Sorghum vulgare*, but now regarded as part of a multiflorous species, *Andropogon Sorghum*, which includes among its varieties the common broom corn and sorghum. It is extensively cultivated in the Mediterranean region and the Orient, occupying the place of a staple grain. The seed properly treated makes a bread of good quality, and is a good grain for quadrupeds and fowls. The plant serves also for green fodder. This is the *durra* or *durra* of Africa and India. It has been introduced to some extent into the United States where it is sometimes called *coffee* or *chocolate corn*, because of its attempted use as a substitute for coffee. Also called *guinea corn*, *kafr-corn*—**Italian millet**, *Setaria Italica*, originally an Asiatic grass. Its variety *Germunica* is known as *German* or *Hungarian millet* and *Bengal* or *Hungarian grass* (See *grass*). millet (mil'ēt), *n.* [*< F. millet, millet, dim. of mil, millet see mill³*.] 1. A cereal grass, *Panicum miltarum*, known from antiquity, and still cultivated in the East and in southern and central Europe. It is an annual, from 2 to 4 feet high, with profuse foliage, the flowers abundant, in open nodding panicles. The grain is one of the best for fowls and affords a nutritious and palatable table food. As cultivated in the United States, it is mostly used for fodder, and elsewhere it is less sown than formerly.

milli- [*< L mille, milia, milia, a thousand see million¹*] An element meaning 'thousand,' also used for 'a thousandth part,' especially in words relating to physics as, *millimeter* (the thousandth part of a meter)

milliampere (mil'i-äm-pä'r), *n* [*< L mille, a thousand (see milli-), + E ampere*] An electrical unit equal to the thousandth part of an ampere

milliard (mil'iär), *n* [*< F milliard, < mille (< L mille, thousand) + -ard*] A thousand millions as, a *milliard* of francs This word became familiar in English through the payment by France to Germany, after the close of the war of 1870-1, of an indemnity of five milliards of francs (about \$1,000,000,000)

milliare (mil-i-ä-rö), *n* [*< L mille, a thousand see milli-*] An ancient unit of length, 8 stadia, a mile

milliare (mil'i-ä), *n* [*< F milliare, < L mille, a thousand (see milli-), + F arc, an arc see arc²*] A unit of surface in the metric system, the one thousandth part of an are, equivalent to 154 07 square metres

milliary (mil'i-ä-ri), *a* and *n*. [= *F milliare, < L miliaris, miliaris, containing a thousand, nout miliarium, miliarium, the number one thousand, a milestone, < mille, pl milia, a thousand. see mil², mile*] 1. *a* Pertaining to the ancient Roman mile of a thousand paces or five thousand Roman feet, marking a mile

Before this was once placed a *miliary* column, supposed to be set in the center of the city

Kedyn, Diary, Nov 4, 1644

II *n* A milestone, specifically, a stone or column set up to form a point of departure in measuring distances

When we approached Hidon, I saw, about a mile from the town, an ancient Roman *miliary* in the road. It is a round pillar of grey granite

Pococke, Description of the East, II 85

millier (mil-yä'), *n* [*F* *< L mille, a thousand see milli-*] In the metric system, a weight equal to a thousand kilograms, or 2,204 6 pounds avoirdupois (nearly a ton) It is the weight of one cubic meter of water at 4° C

millifold (mil'i-föld), *a* [*< L mille, a thousand, + E -fold*] Thousandfold.

His kisson *millifold*
Beway his love and loving diligence
Danes, Holy Roodie, p 27 (*Danes*)

milligram, milligramme (mil'i-gram), *n* [= *It milligramma, < F milligramme, < mille, a thousand (see milli-), + gramme, a gram see gram²*] The thousandth part of a gram, equal to 0 015432, or about $\frac{1}{65}$, of a grain

milliliter, millilitre (mil'i-lë-ter), *n* [= *It millilitro, < F millilitre, < mille, a thousand (see milli-), + litre, a liter see liter²*] A French measure of capacity containing the thousandth part of a liter, equal to 0 00102 of a cubic inch

millimeter, millimetre (mil'i-më-tër), *n* [= *It millimetro, < F millimetre, < mille, a thousand (see milli-), + F mètr, meter see meter³*] The thousandth part of a meter, equal to 0 03937 inch, or nearly $\frac{1}{25}$ inch It is denoted by *mm* as, 25 4 *mm* is 1 inch

milliner (mil'i-nër), *n*. [Formerly also *millanor, millener, millener*, prob orig *Milaner*, a trader from or with Milan (formerly spelled *Milaine, Milayne, etc*) in Italy, famous for its silks and ribbons, as well as for its cutlery; *< Milan + -er* 1 *Cf Milanese* The term *mantua-maker*, usually cited in this connection, has no relevancy, not being connected with *Mantua* in Italy The word *millner* was formerly explained as designating "one having a thousand small wares to sell" (*Minsheu*), as if *< L mille-*

narius, containing a thousand, *< mille, a thousand: see millenary*] 1 Formerly, a man who dealt in articles for women's wear; according to Johnson, "one who sells ribands and dresses for women", now, in common usage, a woman who makes and sells bonnets and other head-gear for women; also, in England, one who furnishes both bonnets and dresses, or complete outfits

No *Millner* can so fit his customers with Gloues.

Shak, *W* 1 (folio 1623), iv 4 192

To conceal such real ornaments as these, and shadow their glory as a *millner's* wife does her wrought stom acht with a smoky lawn or a black cyprus
B Jonson, *Every Man in his Humour* (ed. Whalley, 1766), I 3

24. Formerly, one who made or sold armor of Milan, hence, a dealer in armor

After the year 1500 there were great shops, where armour was sold by the *millners* or armourers of Milan, and by others, and whole suits of armour are frequently found exactly like each other, as they were made for sale to the first comer, and not for any person in particular

R Curzon, *Archæol Inst Jour*, XXII 6

Millner's fold, a strip of velvet, silk, or the like, folded near both edges and then again so as to bring one of the two original folds above the other — **Millner's needle**, a long slender needle used in trimming bonnets, etc

millinery (mil'i-nër-i), *n*. [*< millner + -y*] 1 The articles made or sold by a millner — 2

The industry of making bonnets and other head-dresses for women This work was formerly in the hands of men, but is now almost exclusively a women's occupation.

Those who are cunning in the arts of millinery and dressmaking
Dickens, *Nicholas Nickleby*, xvii

millinet (mil'i-net), *n*. [Irreg *< millin(er) + -et*] 1 A sort of coarse, stiff, thin muslin — 2 A machine-made net *E H Knight*

milling (mil'ing), *n* [Verbal *n*. of *mill*, *v*] 1

The process of grinding, or subjecting materials to the action of the machinery of a grinding-mill Specifically—2 The manufacture of cereals into flour or meal The manufacture of fine flour is now carried on by two distinct methods, respectively called *low milling* and *high milling* Low milling prevailed almost universally until a recent period, but it is now largely superseded by high milling, by which an increased product and a much purer quality of flour are obtainable, especially from wheat inferior to the higher grades In low milling the grain is ground only once and then bolted In high milling it is subjected to repeated grindings The earlier grinding or grindings decorticate the grain, which, being subjected after each grinding to screening and blowing in the middlings purifier, is freed from adherent impurities, and from parts which envelop the finer nutritious portions The latter thus cleaned are called *semolina* (half ground) The semolina is then subjected to grinding, cylinder milling or disintegrator milling, to complete its conversion into fine flour Cylinder milling also called *roller milling*, is the manufacture of flour by the use of cylinder mills Disintegrator milling is the manufacture of flour or meal by the use of the disintegrator *See mill*

3 The operation of upsetting the edge of a coin-blank to form the milled edge, also, the operation of putting the series of small transverse ridges and furrows on the edge of an otherwise finished coin, or on a screw-head to adapt it for easy turning with the fingers See *milled screw*, under *screw* — 4 A method of shaping metals in a milling-machine, by passing the metal under a serrated revolving cylinder or cutter — 5 In *metal-working*, a method of ornamenting metallic surfaces by treatment in a lathe with ribbed tools, which produce ridged surfaces — 6 A method of softening and opening the pores of hides by placing them with some tan-liquor in a wooden drum which is caused to revolve — 7 The felting or fulling of a cloth to thicken it

The term *milling* embraces all those operations which are calculated to effect the felting of the woolen fibres in the fabric by means of pressure or friction
Benedikt, *Coal tar Colours* (trans.), p 64

8 In *pottery*, the operation of grinding and mixing the slip — 9 A thrashing; a fight, a beating [Slang]

One blood gives t'other blood a *milling*

W Combe, *Dr Syntax*, II 2

I determined to box it out with destiny, and put myself in a ribb like attitude for a *milling* match with my fortunes
Mrs Gore, *Cecil*, p 158

10 The act of playing around in a circle said of a school of fish Also called *cart-wheeling* — **High milling**, in *flour manuf*, a method of milling in which the wheat is subjected to a succession of slight partial crushing operations, the product being sifted and sorted after each operation — **Low milling**, the older process of close grinding with the stones as near together as possible, as opposed to the more modern high milling

milling-cutter (mil'ing-kut'er), *n* Same as *milling-machine*

milling-machine (mil'ing-ma-shën'), *n* 1. A power machine-tool for shaping metal and cutting the teeth of gears by means of a rotating

serrated spindle or cylindrical cutter It has a movable table, to which the work is fixed and on which it is brought to the cutter, and it is fitted with index-plates and other appliances for securing accuracy in the work.

The position occupied by the *milling-machine* in modern practical mechanics is almost as important as that occupied by the lathe or planing machine

Joshua Rose, *Practical Machinist*, p 288.

2. A machine for impressing on coins a milled edge or legend corresponding to the milling

Millingtonia (mil-ing-tö'm-ä), *n* [NL (Carl Linné, filius, 1781), named after Thomas Millington, a professor at Oxford.] A genus of bignonaceous trees, with corky bark, opposite, 2- to 3-pinnate leaves, and handsome white flowers, the corolla-tube often 2 to 3 inches long, disposed in corymbs at the ends of the branches There is but one species, *M hortensis*, the East Indian cork-tree, the exact original habitat of which is not known, but which has been cultivated in India from the earliest records. See *cork tree*

Mimosa (mī-mō'sā), *n* [*NL* (Tournefort, 1700), so called from its imitating the sensibility of animal life, *< L mimus*, *< Gr μίμος*, a mimic. See *mimic*, *n*] 1 A large genus of leguminous plants of the suborder *Mimosae* and the tribe *Fuminoideae*, characterized by a legume with entire or jointed valves which break away from a narrow persistent placenta. The plants are either herbs, erect or climbing shrubs, or sometimes trees, and are often prickly. The leaves are almost always bipinnate, but rarely there are none, or the expanded petiole (phyllodium) takes the place of the leaf, and in many species the leaves are sensitive, closing when touched. The flowers are small and sessile, usually having the stamens very much longer than the corolla. They are arranged in globular heads or in cylindrical spikes. About 280 species have been described, natives of the warmer parts of America and Africa, of tropical Asia, and of the Mascarene Islands. Many are cultivated, the most common being the sensitive plant or mimosa plant of botanists, *M. pudica*, which is a branching annual, one or two feet in height, having a great many small leaflets all highly sensitive when touched. *M. myriadenia* is a woody shrub of tropical America, and is remarkable for the great height which it attains, ascending to the tops of the tallest trees

Mimosae (mī-mō'sē-ē), *n* pl. [*NL* (A. P. de Candolle, 1825), *< Mimosa + -ae*] A suborder of leguminous plants, characterized by small regular flowers with a gamosepalous calyx, by having the petals valvate and often united below the middle, and by having stamens which are free or monodelphous. It embraces 6 tribes, 20 genera, *Mimosa* being the type, and about 150 species, the majority of which are confined to the tropics.

mimosite (mī-mō'sīt), *n* [*< Mimosa + -ite*] A fossil seed pod supposed to have belonged to a plant of the *mimosae* family

mimotype (mīm'ō-tīp), *n* [*< Gr μιμος, a mimic, + τυπος, form*] In *zool* and *zoology*, a type or form of animal life which in one country is the analogue or representative of a type or form found in another country, to which it is not very closely related. Thus, the American starlings (*Stercorarius*) are mimotypes of the Old World starlings (*Sturnidae*), the American genus *Geomys* is mimotype of the African *Georchus*, the American jumping mouse (*Zapus*) is placed with the jerboas (*Dipus*) of Africa

Mimotypes, forms distantly resembling each other, but fulfilling similar functions. By the use of this term, the word "analogue" may be relieved of a part of the burden borne by it. Smithsonian Report (1881), p. 460, note

mimotypic (mīm'ō-tīp'ik), *a* [*< mimotype + -ic*] Having the character of a mimotype

Mimuleae (mī-mū'lē-ē), *n* pl. [*NL* (Bentham and Hooker, 1876), *< Mimulus + -ae*] A subtribe of plants of the order *Scrophulariales* and the tribe *Gratiolae*, characterized by a five-toothed calyx, by having the stamens inserted within the corolla-tube, with the anther-cells contiguous, and by a loculicidal capsule with two or four valves. The subtribe embraces 6 genera, *Mimulus* being the type, and about 56 species

Mimulus (mīm'ū-lus), *n* [*NL* (Linnaeus, 1753), so called from the resemblance of its corolla to a mask, *< L. mimulus*, a little mime, dim of *L. mimus*. See *mimic*] A genus of scrophulariaceous plants of the tribe *Gratiolae*, type of the subtribe *Mimuleae*, characterized by a tubular calyx, which is almost always five-angled or five-toothed, by a two-valved capsule, and by having numerous seeds, with the placenta usually united to form a central column. They are reclining or erect, rarely tall, and slightly woody herbs, with opposite undivided leaves, and often showy flowers, which are yellow, orange, red, violet, or rose colored, and solitary in the axils of the leaves, or sometimes racemed at the tips of the branches. The species, numbering 45 or 50, are especially numerous in Pacific North America, but are also widely dispersed elsewhere in temperate regions, though not in Europe. Plants of the genus bear the general name of *monkey flower*. *M. ringens* and *M. alatus*, with violet purple flowers, are common species of wet places in the eastern United States. Various species are cultivated, chiefly in conservatories, some much prized. Among them are *M. moschatum*, the musk plant of gardens, strongly musk scented, the flowers small and pale yellow, *M. cardinalis*, with large scarlet corolla, and *M. glutinosus*, a shrubby, very ornamental conservatory species, the flowers from salmon colored to scarlet

Mimus (mī'mus), *n* [*NL, < L. mimus*, *< Gr μιμος*, an imitator. See *mimic*] A genus of American birds of which the mocking-bird, *M. polyglottus*, is the type. See *mocking-bird*, and *cut under catbird*

Mimusops (mī-mū'sops), *n* [NL. (Linnaeus, 1753), so called from the fancied resemblances of the flowers to an ape's face. < Gr *μῦσος*, gen of *μῦς*, an ape (< *μυέσθαι*, imitate, *μῦς*, an imitator, see *mimic*), + *ωψ*, face] A genus of dicotyledonous gamopetalous plants of the natural order *Sapotaceae* and the tribe *Bumbeceae*. It is characterized by having the six or eight segments of the calyx arranged in two series, the outer ones including the inner, which are more slender, the lobes of the corolla entire and three times as many as the calyx segments, and the six or eight stamens, which are alternate with the same number of stamens. They are trees, or rarely shrubs, with a milky juice, and usually small white flowers, which are often fragrant, in axillary clusters. About 40 species are known, found throughout the tropics. Several, from India and Ceylon, yield a heavy durable timber, and *M. Elengi* also produces small edible berries, the seeds of which afford an abundance of oil. See *balata gum*, *billy tree*, *cow tree*, and *dilly*.

mina¹ (mī'nā), *n* [L, also *min*, < Gr. *μνα*, a weight, a sum of money, < Heb *māneh*, a weight, prop part, portion, number, < *mānāh*, divide, measure out, allot] A unit of weight and of value, originally Assyrian, but used also by the Greeks and other ancient peoples. Bronze and stone Babylonian and Assyrian standards show that there were two Assyrian *mina*, one varying from 980 to 1,040 grams, and the other of half that weight. The Assyrians divided the *mina* into 60 shekels, and 60 *mina* made a talent. In Athens at the time of Pericles it was, in weight of silver, 100 drachmas, equivalent to 363.5 grams, or 15.4 ounces avoirdupois, or 14 + ounces troy, and was in value about \$18.

[The Babylonians] constituted a new *mina* for them selves, consisting of 50 shekels instead of 60

Some writers make an obscure distinction between mind, soul, and spirit. With them the mind is the direct subject of consciousness.

For to say truly, what els is man but his *munde*¹ which, whoeuer haue skill to compasse, and make yeelding and flexible, what may not he commaund the body to per forme?
Pultenham, *Arte of Eng Poetrie*, p. 164

Mind, therefore, is to be understood as the subject of the various internal phenomena of which we are conscious, or that subject of which consciousness is the general phenomenon. Consciousness is, in fact, to the *mind* what extension is to matter or body. Though both are phenomena, yet both are essential qualities, for we can neither conceive *mind* without consciousness, nor body without extension
Sir W. Hamilton, *Metaphysics*, ix

Descartes, *Meditations* (tr. by Veitch), iv

In psychology, on the other hand, the individual *mind* may mean either (1) the series of feelings, or "mental

phenomena" above referred to, or (2) the subject of these feelings, for whom they are phenomena, or (3) the subject of these feelings or phenomena + the series of feelings or phenomena themselves, the two being in that relation to each other in which alone the one is subject and the other a series of feelings, phenomena, or objects.

He puts me in *mind* of the picture of the great ox in a gilt frame
Dulver, *Pelham*, xii

Unconscious *mind*. See *unconscious* = *Syn Mind*, *Intellect*, *Soul*, *Spirit*, reason sense, brain. Primarily *mind* is opposed to matter *intellect* to feeling and will *soul* to body, and *spirit* to flesh. The old division of the powers of the *mind* was into *intellect*, *sensibility* and will, *mind* is variously used to cover all or some of these, but when less than the whole is meant it is chiefly the *intellect* as, he seems to have very little *mind*. Yet *mind* is sometimes used with principal reference to the will as I have half a *mind* to go. Where *spirit* and *soul* differ, *spirit* applies rather to moral force, and *soul* to depth and largeness of feeling (*Sic soul*). In the New Testament *soul* is used to translate a word covering all life whether physical or spiritual, as in Mat x 28. Upon the highest usage in the Scriptures is founded the common representation of man as immortal by the word *soul*. Hence *soul* is used for the central, essential, or life giving part of anything as, he was the *soul* of the party. The definitions under each of these words should be studied to get its range and idiomatic uses. See *reason*

1 An excavation in the earth made for the
purpose of getting metals, ores, or coal. Mine
work, in metal mines, consists in sinking shafts and win-
es, running levels, and stoping out the contents of the vein
thus made ready for removal. In coal mining the opera-
tions differ in detail from those carried on in connection
with metal mines, but are the same in principle. The
details vary in coal mining with the position and thick-
ness of the beds. A mine differs from a quarry in that
the latter is usually open to the day, but in any mine a
part of the excavations may be an openwork (see that
word), as in running an adit-level, which may be carried
to a considerable distance before becoming covered by
earth or rock. When the term *mine* is used, it is gener-
ally understood that the excavation so named is in actual
course of exploitation, otherwise some qualifying term
is abandoned is required. No occurrence of ore is de-
signed as a mine unless something has been done to de-
velop it by actual mining operations. There are certain
excavations which are called neither mines nor quar-
ries as, for instance, places where clay is being dug out
for bricks, such places are frequently (especially in
England) called *pits*, and also *openworks*. With few
and not easily specified exceptions, a quarry is a place
where building stone, or building materials of any kind
(as lime, cement, etc.), are being got, a mine, where some
metal or metalliferous ore is in the process of exploitation.
In English the term *mine* includes excavations designated
by the French as *mines*, as well as some of those called
by them *minieres*, quarry is the equivalent of the French
carrière. The term *mine* is sometimes extended in use to
include the ores as well as the excavation.

used in such a mine, or sunk under water in
operations of naval defense to serve a similar
purpose to mines on land. The *radius of explosion*
of such a mine is the straight line drawn from the center of

of rupture is the distance from the center to the curved
surface to which the disturbance caused by the explosion
extends.

Common mine (*mīn*), a mine in which the radius of the
crater, or circular opening produced by the explosion, is
equal to the line of least resistance—that is, the shortest
line from the center of the charge to the surface of the
ground.—**Contact mine**, a submarine mine designed to
be exploded by contact with a ship's bottom or side.—**Electrical mine**, a charge or series of charges of ex-
plosive used for mining and exploded by electricity, a

submerged torpedo which can be exploded electrically
from a distant point.—**Electro-contact mine**, a sub-
marine mine designed to be exploded electrically when
in contact with a ship's bottom, the contact of the vessel
automatically completing the electric circuit.—**Electro-
mechanical mine**, a submarine mine differing from an
electro-contact mine in that the battery is contained
in the mine itself instead of being outside of it, on the
shore.

Electro-mechanical mines can be made by placing a vol-
tate battery inside the mine itself and joining it up to a fuse

mine-dial (min'di'al), *n*. See *dial*, 8.

mine-man (min'man), *n*. A miner.

I speak in other papers as if there may be a volatile gold
in some ores and other minerals, where the mine-men do
not find anything of that metal. Boyle, Works, III. 99.

mineont, *n*. An obsolete form of *minion*¹.

respectively of an adj. *minarius*, pertaining to
a mine (as a noun, *minarius*, m., a miner see
miner), equiv. to *mina*, a mine, < *minare*, mine,
open a mine see *mine*²] I. *n* 1 Any con-
stituent of the earth's crust, more specifically,
an inorganic body occurring in nature, homo-
geneous and having a definite chemical com-
position which can be expressed by a chemi-
cal formula, and further having certain distin-
guishing physical characters. A mineral is in al-
most every case a solid body and, if it has been formed
under suitable conditions, it has, aside from its chemi-
cal composition, a definite molecular structure which is
exhibited externally in its crystalline form and also inter-
nally in its cleavage, its behavior with respect to light
(optical properties), heat propagation, etc. Further-
more, it has other characters, which may belong to it
even when amorphous (though sometimes modified by
crystallization), as specific gravity, hardness, fracture, te-
nacity, luster, color, fusibility, etc. A certain variation
in physical characters is consistent with the identity of
a mineral species, but if the same substance, as calcium
carbonate in calcite and in aragonite occurs in two or
more groups of crystals which cannot be referred to the
same fundamental form, each is ranked as a distinct spe-
cies. A difference in specific gravity and in some other
physical characters usually accompanies the difference in
crystallization. How great a variation in chemical com-
position as by isomorphism in placement, is consistent
with the identity of a single mineral species is a point
about which opinion differs. Some authors treat the *isomorphs*
(all of which have the same form and the same general
formula) as a group of related species, and others as vari-
eties of a single species. Chemical compounds formed
in the laboratory or in the arts are not regarded as min-
erals, but where such compounds are already known
as occurring in nature are thus formed they are usually
called *artificial minerals*. Much attention has been de-
voted of recent years to the artificial reproduction of min-
erals, but almost solely as a matter of scientific interest,
and as throwing light on the processes of nature.

2† A mine. See *mines*.

His very madness, like some ore

Acidiferous mineral. See *acidiferous*. **Adipocere**
mineral. See *adipocere*.—**Ethiops mineral**. See
ethiops.—**Agaric, bezoar, chameleon, etc., mineral**.
See the qualifying words. **Altered mineral**, one which
has undergone more or less chemical change under the
processes of nature. The investigation of the alteration of
minerals and of the pseudomorphous minerals (see *pseudo-
morph* and *pseudomorphism*) thus formed is a prominent
branch of mineralogy.—**Crystal mineral**, *mīn*, *crunelle*,
a mixture of potassium nitrate and sulphate. **Mineral-
deposit**, any valuable mass of ore. Like ore deposit, it may
be used with reference to any mode of occurrence of ore,
whether having the character of a true aggregate, or
gush vein, or of any other form in which ores are found oc-
curring. See *ore deposit*. **Torbanite Hill mineral**. Same
as *Boydhead coal* (which see, under *coal*).

II. *a* 1 Having the nature or character of
a mineral as defined above, obtained from a
mineral or minerals, belonging to the class of
minerals, consisting of minerals, as, a *mineral*
substance, the *mineral* kingdom. Coal dug from
the earth is sometimes called *mineral coal*, to distinguish
it from *charcoal*, which is artificially prepared by charring
wood.

The lofty lincs abound with endless store
Of mineral treasure.

Sir R. Blackmore, Creation, III.

2 Impregnated with minerals or mineral mat-
ter, as, *mineral waters*, a *mineral spring*.—
Mineral acids, a name given to sulphuric nitric, and
hydrochloric acids.—**Mineral alkali**. Same as *soda*.—
Mineral black, an impure variety of carbon, of gray-
black color, sometimes used as a pigment.—**Mineral
blue**. See *blue*.—**Mineral candle**. See *candle*.—**Min-
eral caoutchouc**, a variety of bitumen, intermediate
between the harder and softer kinds. It sometimes
much resembles india rubber in its softness and elastic-
ity, hence its name. It occurs near Castleton in Derby-
shire. Also called *elaterite*.—**Mineral chameleon**. See
chameleon.—**Mineral charcoal**. Same as *another of coal*
(which see, under *coal*). **Mineral coal**. See *II. 1*, and
coal.—**Mineral cotton**, a fiber formed by allowing a jet
of steam to escape through a stream of liquid slag, by which
the slag is blown into fine white threads. It is a poor con-
ductor of heat, and is therefore suggested as a covering for
steam boilers and pipes. (See *II. Knight*.) A variety with
short fiber is called *mineral wool*, and is used as a non con-
ductor of heat, a densifying for floors of buildings, etc.—
Mineral wax. See *asbestos*.—**Mineral gray**. See *gray*.
—**Mineral greens**. See *green*.—**Mineral kingdom**,

that one of the three grand divisions of natural objects which consists of minerals or inorganic bodies, and of which mineralogy is the science, as distinguished from the vegetable and animal kingdoms. — **Mineral oil.** Same as *kerosene*. **Mineral pitch,** a solid softish bitumen. See *asphaltum*, and *elastic mineral pitch*, under *elastic*. — **Mineral salt,** a salt of a mineral acid. — **Mineral solution,** arsenical liquor, or liquor potassae arsenitis. — **Mineral tallow.** Same as *bathebitum*. — **Mineral tar,** in *mineral*, bitumen of the consistency of tar. See *maltha* and *bitumen*. — **Mineral waters,** a name given to certain spring-waters so far impregnated with foreign substances as to have a decided taste and a peculiar operation on the physical economy. The ingredients contained in the principal mineral springs of the United States are gases, carbonates sulphates, chlorids, acid of iron, and silica. Mineral waters may in most cases be imitated artificially. — **Mineral wax.** Same as *ozocerite*. — **Mineral wool.** See *mineral cotton*. — **Mineral yellow,** a pigment made of oxid and chlorid of lead, obtained by digesting powdered litharge in a solution of common salt, washing, drying, and fusing the product. Also known as *Turner's yellow*, *Montpellier yellow*, *Cassel yellow*, *patent yellow*.

mineral-dresser (min'e-ral-dres'ér), *n*. A small machine for trimming geological specimens. It consists of a strong frame with two opposed chisels, between which the specimen is placed, one of the chisels, after being adjusted at the proper distance, remains fixed, while the other, which is attached to a lever worked by a screw, is pressed with great force against it.

mineral-holder (min'e-ral-hól'dér), *n*. A device for exposing small pieces of stone, ores, etc., under a microscope. It consists of two clamps or spindles pivoted so that the object held in them can be revolved readily.

mineralisable, mineralisation, etc. See *mineralizable, etc.*

mineralist (min'e-ral-ist), *n*. [*F. minéraliste*] = *It. mineralista*, as *mineral* + *-ist*. One who studies or is skilled in minerals, a mineralogist.

It is the part of a *mineralist* both to discover new mines and to work those that are already discovered.

Boyle, Origin of Forms, Præmial Discourse

A mine digger may meet with a gem or a mineral which he knows not what to make of till he shows it a jeweller or a *mineralist*.

Boyle

mineralizable (min'e-ral-i-zá-bl), *a*. [*< mineralize + -able*] Capable of being mineralized. Also spelled *mineralisable*.

mineralization (min'e-ral-i-zá'shon), *n*. [*= F. minéralisation = Sp. mineralización = Pg. mineralização = It. mineralizzazione*, as *mineralize* + *-ation*] The act or process of mineralizing, the process of converting or being converted into a mineral, as a metal into an oxid, sulphuret, or other ore. The conversion of vegetable matter into coal is not properly mineralization, although sometimes so called. Proper mineralization of vegetable matter does take place, however, as when wood is converted into opal, or becomes silicified, as very frequently happens under certain conditions. This is commonly and properly called *fossilization* or *petrification*, and more rarely *mineralization*. Also spelled *mineralisation*.

Some phenomena seem to imply that the *mineralization* must proceed with considerable rapidity, for stems of a soft and succulent character, and of a most perishable nature, are preserved in flint.

Lyell, Elements of Geology, I 92

mineralize (min'e-ral-iz), *v*, pret and pp *mineralized*, ppr *mineralizing* [*= F. minéraliser = Sp. Pg. mineralizar = It. mineralizzare*, as *mineral* + *-ize*] *I. trans* To change from the metallic character to that of an ore. Thus tin, a white metal, becomes very dark colored and unmetallic in appearance when *mineralized* by oxygen, as it is in the common ore of that metal.

II. intrans. To go on a mineralogical excursion, make an excursion with the view of collecting minerals.

Also spelled *mineralise*.

mineralizer (min'e-ral-iz-ér), *n*. A substance or agent that mineralizes, a substance that combines with a metal to form an ore. The principal mineralizer is sulphur, and combinations of the metals with this substance form the most common ores, especially at some depth below the surface. Near the surface the sulphureted ores are usually found to have been changed to oxides and carbonates. Some metals (as tin) are almost exclusively mineralized by oxygen, others (as iron) are extensively mineralized by both oxygen and sulphur. Arsenic, antimony, and chlorine are other important mineralizers. Some metals (as silver) exist in combinations containing sulphur, arsenic, and antimony, all combined with the metal to form one mineral species. Also spelled *mineraliser*.

Silver, tin, copper, lead, zinc, and iron are obtained almost exclusively in the form of ores—that is, in combination with a *mineralizer*, of which the most common one is sulphur.

J. D. Whitney, Metallic Wealth of the United States, p. 81

mineralogic (min'e-ra-loj'ik), *a*. [*= F. minéralogique = Sp. mineralógico = Pg. mineralógico*, as *mineralogy* + *-ic*] Same as *mineralogical*.

mineralogical (min'e-ra-loj'ik-al), *a*. [*< mineralogic + -al*] Pertaining to mineralogy or the science of minerals, as, a *mineralogical* table.

mineralogically (min'e-ra-loj'ik-al-i), *adv.* According to the principles of, or with reference to, mineralogy.

mineralogist (min'e-ral-ô-jist), *n*. [*= F. minéralogiste = Sp. Pg. It. mineralogista*, as *mineralogy* + *-ist*] *I*. One who is versed in the science of minerals, or one who treats or discourses of the properties of mineral bodies.

The exactest mineralogists have rejected it.

Sir T. Browne, Vulg. Err. II 1

2. In conch, a conchologist or carrier-shell, any member of the family *Xenophoridae* (or *Phoridae*). See *cut* under *carrier-shell*.

mineralogize (min'e-ral-ô-jiz), *v. t.*; pret. and pp *mineralogized*, ppr *mineralogizing*. [*< mineralogy + -ize*] To collect mineralogical specimens, study mineralogy.

He was botanizing or *mineralogizing* with O'Toole's chaplain.

Mrs. Edgeworth, Ennui, XI

mineralogy (min'e-ral-ô-jí), *n*. [*< F. minéralogie (> Sp. mineralogía = Pg. It. mineralogia*), for **mineralogíe*, *< minéral*, mineral, + *Gr. -λογία, < λέγω, speak*, see *-ology*.] The science which treats of the properties of mineral species (see *mineral*), which teaches how to characterize, distinguish, and classify them, and which investigates their occurrence in nature with reference to their mode of formation (paragenesis) and the alteration which they may have undergone. Taken broadly, it includes also, as a branch, lithology, the object of which is the investigation of minerals in their mutual relations as parts of rock masses. The investigation of rock masses with respect to their history or occurrence as parts of the crust of the earth belongs to geology. **Chemical mineralogy**, the investigation of the chemical composition of minerals, their method of formation and the changes they undergo when acted upon chemically either in the laboratory or in nature.

Descriptive mineralogy, that branch of the science of mineralogy which is devoted to the description of the physical and chemical properties of mineral species. — **Determinative mineralogy**, that branch of the science of mineralogy which has as its object the determination of mineral species by means of appropriately arranged tables, based upon their physical and chemical characters. — **Physical mineralogy**, the science of the physical properties of minerals, that is, of their properties as related to cohesion, heat, light, electricity, etc. It includes as special branches, crystallography and optical mineralogy.

Minerva (mi-nér'vá), *n*. [*I. Minerva, OL. Menerva, Etruscan Menerva*, prob. with formative *-va*, *< *menes-* = *Gr. μένος*, mind, spirit, force, etc. *< √ men-*, think, as found in *men(t)-*, mind, *men(m)se*, remember, etc. see *mind*], *n*. In *Rom. myth.*, one of the three chief divinities, the other two being Jupiter and Juno. The chief seat of the cult of all three was the great temple on the Capitoline Hill. Minerva was a virgin, the daughter of Jupiter, the supreme god and hence was identified, as the Romans came more and more under the influence of Hellenic culture, with the Greek Athene (or Athena), or Pallas, the goddess of wisdom, of war and of the liberal arts. Like Athene, Minerva was represented in art with a grave and majestic countenance, armed with helmet, shield, and spear, and wearing long full drapery, and on her breast the eagle. See *cut* under *Athene*. **Bird of Minerva**, the owl. — **Minerva Press**, a printing press formerly in Leadenhall Street, London, also, a class of ultra sentimental novels, remarkable for their intricate plots, published from about 1790 to 1810 at this press, and other productions of similar character.

minervalt (mi-nér'val), *n*. [*< F. minervalt, tuition fees*, *< I. minervalt*, a gift in return for instruction, *< Minerva*, the goddess of wisdom, see *Minerva*] Entrance-money given for teaching.

Bailey, 1731

The chief *minervalt* which he bestowed upon that society.

Sp. Hacket, Abp. Williams, I 96

minery (mi-nér-i), *n*. [*< mine² + -ery*.] Mines collectively, a mining district or its belongings, a quarry.

Nearly this we were shew'd a hill of alum, where is one of the best *mineries*, yielding a considerable revenue.

Evelyn, Diary, Feb 7, 1645

minette (mi-net'), *n*. [*F*] A form of syenite in which brown mica predominates.

Milton, Comus, I 904

3 To bring into relation or association, connect or conjoin

Those that mingle reason with your passion
Must be content to think you old
Shak., Lear, II 4 238.

I owe you so much of my health, as I would not mingle you in any occasion of impairing it
Donne, Letters, vi.

4 To confuse, impair or spoil by mixture with something

This is the mark at the which the devil shooteth, to evacuate the cross of Christ, and to mingle the institution of the Lord's supper
Latimer, Sermon of the Plough

The best of us appear contented with a mingled imperfect virtue
Rogers, Sermons.

= *Syn. 1* and *2. Mingle, Mix, Blend*. *Mingle* and *mix* are often quite synonymous, where they differ, *mix* is likely to be found to indicate a more complete loss of individuality by that which is joined with something else. *Blend* vividly suggests the joining of two or more colors to form a third, and so a passing of two or more sounds, qualities, or the like into each other in such a way as to produce a result partaking of the qualities of each.

II. intrans. 1. To be or become joined, combined, or mixed, enter into combination or intimate relation, as, to mingle with society, oil and water will not mingle

What, girl! though grey
Do something mingle with our younger brown, yet ha' we
A brain that nourishes our nerves
Shak., A. and C., iv 8 19

I heard the wrack,
As earth and sky would mingle
Milton, P. R., iv 468

2 To be formed by mixing or blending [Rare.]

The sun doth stand
Beneath the mingling line of night and day
Jones Very, Poems, p. 89.

3 In *politics* (a) One of the persons appointed
by the sovereign or chief magistrate of a coun-
try as the responsible heads of the different de-
partments of the government, a minister of
state; as, the *minister* of foreign affairs, of the
interior, of finance, of war, of justice, etc.
These officers constitute the *ministry* or executive de-
partment of the government, at their head is the *prime* (first)
minister, or *premier*, the immediate deputy or repre-
sentative of the sovereign or chief magistrate, he and other
ministers, selected by him, are called collectively, as his
coordinate advisers in matters of policy, the *cabinet*.
Minister is used in most European countries as the official
title of all heads of departments, but in Great Britain only
in a generic sense (as, a *minister* of the crown), the individ-
ual ministers being officially designated the secretary of
state for foreign affairs, for war, for the colonies, etc., or
by other titles, as chancellor of the exchequer (minister of
finance) In the government of the United States the title
minister is not used at all, and there is no ministry, the
corresponding officers, differing from the preceding both
in mode of appointment and degree of power and respon-
sibility, are called secretaries (of state, of the interior, of
the treasury, of war, of the navy, of agriculture), post-
master general, and attorney general. See *cabinet*, 4

Very different training was necessary to form a great

mink (mingk), *n* [Formerly also *minz* (apparently an error), appar. < Sw. *mänk*, a mink (*Putorius lutreola*), transferred from the European mink to the American species] 1 An American digitigrade carnivorous quadruped of the family *Mustelidae*, *Putorius (Lutreola) vison*, of semi-aquatic habits. The mink belongs to the same genus as the stoats and weasels, but to a different subgenus, its form being modified in adaptation to its aquatic habits, in which respect it approaches the otter. It was once called *lesser otter*. It is larger and stouter than any stoat, with shorter ears, uniformly bushy tail and half webbed feet, the color is rich dark chestnut-brown, blackening

on the back and tail, the chin, and usually some irregular patches on the throat, breast, or belly, are white. It is 15 to 18 inches long, the tail 6 or 8 inches more. It is found everywhere in North America in suitable places, its fur

American Mink (*Phocinus (Lutreolus) lutreolus*)

is valuable, and the animal is systematically trapped, especially in British America. Like its relatives, the mink exudes a strong musky odor and is destructive to poultry. It has been tamed, and bred in minkeries, like the ferret. The little black or mountain mink, described by Audubon and Bachman as a distinct species *P. nigriceps*, is a small dark variety. The corresponding animal in Europe is *P. lutreola*, commonly called *nutr* or *nutr* and by its Swedish name *mink* (sometimes *mank*) the designation *European mink* being a late book name. It is much like the American mink, but its average size is smaller, and it usually has the upper lip as well as the chin white, and presents certain dental peculiarities. The Siberian mink, lately so called, in the kulton, *P. sibiricus*, a quite different species. Also called *mison*.

minne-drinking (min'e-dring'king), *n* [*< G minne, love, + E drinking, verbal n of drink, +*] Originally, a heathen practice among the Teutonic nations at grand sacrifices and banquets, in honor of the gods or in memory of the absent or deceased. This custom was sanctioned by the church the saints being substituted for the gods and was especially consecrated to St. John the Evangelist and to St. Gertrude. Traces of it are still found in certain localities of Germany.

Minne drinking, even as a religious rite, apparently exists to this day in some parts of Germany. At Otterken, a village of Hildesheim, on Dec 27 every year a chalice of wine is hallowed by the priest, and handed to the congregation in the church to drink as Johannes segen (blessing). 2 In the United States, one of many different fishes of small size. (a) Any cyprinoid of the genus *Phoxinus*, of which there are several species, from 1½ to 8 inches long, in the Mississippi basin and westward, as *P. neogreus*, *P. flammescens*, *P. phlegathonus*. This is the correct use of *minnow*, though in popular speech it extends to various other little cyprinoids, also loosely called *roach dace shiner*, etc. Among these may be mentioned the red minnows of the genus *Chrosomus*, as *C. erythrogaster*, one of the prettiest of all, 2 or 3 inches long, the silvery minnow, *Hybognathus nuchalis*, and others of this genus the black headed minnow or fathead, *Pimephales promelas*, the blunt nosed minnow, *Hybomachus notatus*, the Texas hardnosed minnow, *Cochlogobius natus*, the bull headed and straw colored minnows *Chota taurocephalus* and *C. straminea*, the spotted tail, *C. stygimaturus*, and more than 60 other kinds of *Chota*, about 50 species of the genus *Minnius*, various species of the genera *Rhinichthys*, *Ceratosichthys*, *Apocope*, *Coneurus*, etc. These abound in fresh waters of the United States, and *minnow* is the usual name of all those which have not more particular designations. (b) One of numerous small cyprinodont fishes, otherwise known as *killyfishes* and *minnyfishes*, and more fully called *top-minnows*, as *Zygo noetes notatus* and many others of this genus. The most abundant of these is *Fundulus heteroclitus*, found in brackish waters from Maine to Mexico, and sometimes specified as *salt water minnow*. *P. diaphanus* is the spring minnow. (c) Any American member of the family *Umbrellae* and genus *Umbra* or *Melanura*, as *U. or M. bimaculata* more fully called *new minnow*, 4 inches long, found from New England to Minnesota and South Carolina, often in mere mud holes which would hardly be expected to lodge any fish. It is closely related to *U. crameri* of Austria. (d) One of various small viviparous perches or emboloto-cold fishes of California, chiefly of salt water, as the sparmin, *Micrinotus* or *Cymatogaster aggregatus*. (e) One of several small suckers or catostomid fishes, a loose use.

II. *n* 1 A person of either sex who is under age, one who is of less than the legal age for the performance of certain acts, one under the authority of parents or guardians, because of not having reached the age at which the law permits one to make contracts and manage one's own property, an infant in the legal sense. In *Scots* law, *minor*, when used in contradistinction to *pupil* signifies a person above the age of pupilarity (twelve in females and fourteen in males) and under that of majority, which in both sexes is twenty years. The technical term in English and United States law for one under the age of legal capacity (twenty years) is *infant* but *minor* is used in the same sense in general literature. Compare *age*, *n*, 3.

ML *ministrialis* in same sense, < *ministerium*, service see *ministerial*)] 1. A musician, especially one who sings or recites to the accompaniment of instruments. Specifically in the middle ages, the minstrels were a class who devoted themselves to the amusement of the great in castle or camp by singing ballads or songs of love and war, some times of their own composition, with accompaniment on the harp, lute, or other instrument together with suitable mimicry and action and also by story telling, etc. The immediate class of professional musicians from which the later minstrels sprang appeared in France as early as the eighth century, and was by the Normans conquest introduced into England where it was assimilated with the Anglo-Saxon gleemen. Every where the social importance of the minstrel slowly degenerated until in the fifteenth century they had formed themselves generally into guilds of itinerant popular musicians and mountebanks. In England they fell so low in esteem that in 1567 they were classed by a statute with rogues, vagabonds, and sturdy beggars, but in France their guilds were maintained until the revolution. —3 Originally, one of a class of singers of negro melodies and delineators of life on the Southern plantations which originated in the United States about 1830 called *negro minstrels*, although they are usually white men whose faces and hands are blackened with burnt cork. The characteristic feature of such a troupe or band is the middle man or interlocutor, who leads the talk and gives the cues, and the two end men, who usually perform on the tambourine and the bones, and between whom the indispensable conundrums and jokes are ex-

changed. As now constituted, a negro minstrel troupe retains but little of its original character except the black faces and the old jokes.

2 A place where money is coined by public authority. The coining of money is now considered a prerogative of government. In early times there were many mints in England, but now the only one in that country is the Royal Mint, Lower Hill, London. The United States Mint was established by act of April 2d 1792, and located at Philadelphia. Other mints have since been established at San Francisco, New Orleans, Carson City, and Denver (but the last two are properly speaking assay offices). The United States Mint is a bureau of the Treasury Department, under the charge of an officer called the Director of the Mint

Throughout the eighteenth century it was the most popular of the more stately and ceremonious dances. — 2 Music for such a dance, or in its rhythm, which is triple and slow. Minuets are frequently found in the old suite, and also in the later sonata and symphony. They properly consist of two contrasted sections of sixteen measures each, the second of which is generally called a *trio*, because originally written for but three instruments, but this regular form is often considerably modified. Beethoven was the first to replace the minuet in the sonata and the symphony by the *scherzo*, which resembled the minuet somewhat in rhythm, but was more sprightly and unrestricted in form and spirit.*

minum, *n.* An obsolete form of *minim*. *Cot-gravi*

minus (mī'nus), *a.* [*< L minus, neut. of minor, less see minor.] 1 Less (by a certain amount) followed by a noun as an apparent object (a preposition, by, to be supplied) as, the net amount is so much minus the waste or tare, 25 minus 9 is 16. In algebra and arithmetic this sense is indicated by the sign —, called the minus sign or sign of subtraction as, a — b = x, which is read 'a minus b equals x' 25 — 9 = 16.*

2 Less than nothing, belonging to the inverse or negative side, as of an account, lying in the direction from the origin of measurement opposite to ordinary quantities, below zero, or below the lowest point of positive or upward reckoning as, a minus amount or sum (that is, an amount or sum representing loss or debt), a minus quantity in an equation (that is, one having the minus sign before it), the tempera-

ture was minus twenty degrees (written — 20°, and read "twenty degrees below zero"). In some common mathematical phrases, *minus* seems to be used as an adverb modifying the numeral adjective. Thus astronomers speak of the year minus 554 of the Christian era, meaning 554 B. C.

3 Marking or yielding less than nothing or less than zero; negative in value or result as, the minus sign (see def. 1) — 4 Deprived or devoid of; not having, without, as something necessary as, he escaped minus his hat and coat, a gun minus its lock [Colloq. or humorous] — 5 Lacking positive value, wanting [Colloq.]

Minuscule letters are cursive forms of the earlier uncials. *Isaac Taylor, The Alphabet, l. 71*

II. *n.* The kind of reduced alphabetical character which, originating in the seventh century, was from about the ninth substituted in writing for the large uncial previously in use, and from which the small letter of modern Greek and Roman alphabets was derived, hence, a small or lower-case letter in writing or printing, as distinguished from a capital or majuscule.

The *minuscule* arose in the 7th century as a cursive monastic script, more legible than the old cursive and more rapidly written than the uncial, and constructed by a combination of the elements of both.

Isaac Taylor, The Alphabet, II, 160

The period of the uncials runs from the date of the earliest specimens on papyrus to the 6th century, that of the *minuscule* from the 6th century to the invention of printing. *Encyc Brit., XVIII, 145*

(b) In *geom.*, the sixtieth part of a degree of a circle division of units by sixtieths is the characteristic of the Babylonian system. Ptolemy, following the Babylonian astronomers, divides the diameter of the circle into 120 minutes or degrees, and these into sixty parts and these again into sixty parts. These subdivisions were translated into Latin as *partes minutae prima* and *partes minutae secunda*, whence our minutes (primes) and seconds. In modern astronomical works minutes of time are denoted by the initial letter *m* and minutes of a degree or of angular space by an acute accent ('). See *degree*, 8.

Miocene (mī-ō-sēn), *a.* and *n.* [= *F miocene*, *< Gr μίωος*, less, + *καινός*, recent] I. *a.* In *geol.* one of Lyell's subdivisions of the Tertiary. See *Tertiary*

II. *n.* In *geol.* the Miocene strata.

Also spelled *Miocen*

Miocenic (mī-ō-sen'ik), *a.* [*< Miocene + -ic*] Miocene. Also spelled *Mioecenic*

M. Gaudry drew attention to a gigantic animal of the middle of the *miocene* period of the Wyoming
Lancet, No. 2488, p. 45

Miohippus (mī-ō-hip'us), *n.* [Also *Miohippus*, NL, *< E Mio(cene) + Gr ιππος*, horse] A genus of fossil perissodactyl ungulates referred to the family *Egidae*, occurring in the Miocene strata of North America. These animals were about the size of sheep

mionite, meionite (mī-ō-nīt), *n.* [So called from its low pyramids, *< Gr μίωος*, less, + *-ite²*] A mineral of the scapolite group, occurring on Monte Somma, Vesuvius, in transparent colorless tetragonal crystals.

Mionornis (mī-ō-nōr'nis), *n.* [NL, *< Gr μίωος*, less, + *ὄρνις*, a bird] A genus of sub-fossil dinornithid birds of New Zealand, of the family *Immotidae*, including two species separated from the genus *Immotus* by Julius Haast in 1874. Also *Mionornis*

miophylly (mī-ō-fil-i), *n.* [*< Gr μίωος*, less, + *φύλλον*, a leaf] A diminution of the normal number of leaves in a whorl, due to actual suppression. It differs from abortion in the suppressed organs having never started to grow. Miophylly occurs also in the calyx, corolla, and gynoecium. Also spelled *meophylly*

mosis (mī-ō'sis), *n.* [NL, *< Gr μίωος*, a lessening, *< μίωω*, lessen, *< μίωω*, less, irreg. compar. of *μικρός*, small, or *ὀλιγός*, few] Diminution. Specifically — (a) In *het.* (1) A figure by which a thing is represented as less than it really is, as in belittling an opponent's statement affecting to scorn an accusation, etc. (2) Understatement so as to intensify, especially, expression by negation of the opposite. (b) In *pathol.*, that period of a disease in which the symptoms begin to diminish. Also *mesoma*

miostemonous (mī-ō-stem'ō-nous), *a.* [*< Gr. μίωος*, less, + *στῆμων*, for 'stamen' see *stamen*] Having the stamens less in number than the petals and of plants. Also *miostomonous*

miotaxy (mī-ō-tak-si), *n.* [NL, *< Gr μίωος*, less, + *τάξις*, arrangement] The suppression of an entire whorl of the members of any organ in a flower, as the sepals, petals, stamens, or styles. The androecium and gynoecium are most frequently suppressed, producing male or female flowers exclusively as the case may be. Also spelled *meotaxy*

miour, *n.* See *mir*

mi-parti (mī-pār'tē), *a.* [*F, < mi (< L medius)*, half, + *parti*, part see *midium* and *party*] 1 Of two colors and equally or nearly equally divided between them as, *mi-parti* hose, of which one leg is of a different color from the other — 2 In *her.*, divided per pale half-way down the escutcheon, the partition-line being met at the fesse-point by some other line, which must also be expressed in the blazon

mir (mēr), *n.* [Russ *mir*, union, concord, peace, also world, = Bulg *mir*, peace, world, = Serv Bohem *mir* = Albanian *mir* = Lett *mir*, peace] A Russian commune, a community of Russian peasants. The rural population of Russia has been from ancient times organized into *mir* or local communities, in which the land is held in common, the parts of it devoted to cultivation being allotted by general vote to the several families for varying terms. Re distributions and equalization of lots take place from time to time. Houses and orchards are theoretically the property of the *mir*, but usually remain for a long time under the same ownership. Meadows and forests are frequently apportioned and there is generally a common for grazing. Every *mir* in matters of local concern governs itself through its own assemblies and elected officers

mirabily (mī-rab'ī-lī-ri), *n.* [Prop *mirabilis*, *q. v.* see *mirable*] A relator of wonders

The use of this work is nothing less than to give contentment to the appetite of curious and vain wits, as the manner of the *mirabily* is to do
Bacon, Advancement of Learning, II.

Purchas, Pilgrimage, p. 98

II. *n.* A book in which wonderful things are noted, a treatise on miracles, portents, prodigies, omens, and the like

Mirabilis (mī-rab'ī-lī'ō-e), *n. pl.* [NL. (Choisy, 1849), *< mirabilis* + *-ae*] A tribe of dicotyledonous apetalous plants of the natural order *Nyctaginaceae*, the four o'clock family. The fruit is a utricle, surrounded by the base of the perianth, which keeps on growing after flowering, the embryo is much curved with an elongated radicle. The tribe embraces 16 genera *Mirabilis* being the type, and about 112 species, nearly all of which are confined to the western hemisphere

Mirabilis (mī-rab'ī-līs), *n.* [NL. (Linnæus, 1737), *< L. mirabilis*, wonderful see *mirable*] A genus of nyctaginaceous plants, type of the tribe *Mirabilis*. The flowers are surrounded by an involucre of united bracts, which remain unchanged after flowering. The elongated perianth is rarely campanulate. They are handsome branching herbs with opposite leaves, the lower ones petiolate and the upper sessile, and with quite large, often fragrant flowers, which are white, scarlet, or variegated, and arranged in branching cymes. There

are 10 or 12 species, natives of the warmer parts of America. *M. jalapa* is the common four-o'clock or marvel of Peru. A few other species are somewhat cultivated. See *afternoon-ladies*.

mirabilite (mī-rāb'lī-tī), *n* [So named by Glauber to express his surprise at its artificial production, < *L. mirabilis*, wonderful (see *mirable*), + *-ite*] A name given to the hydrous sulphate of sodium, or Glauber salt, occurring usually in a state of efflorescence about salt-springs. It is used as a substitute for soda in the manufacture of glass.

mirage (mī-rāzh'), *n* [*F. mirage* (= Pg. *mir-*

due to excessive bending of light-rays in trav-
ersing adjacent layers of air of widely dif-
ferent densities, whereby distorted, displaced,
or inverted images are produced. The requisite
change in density arises only near the earth's surface,
and the hot shining of the sun seems to be an invari-

able antecedent. The mirage of the desert presents an
appearance of objects reflected in a surface of water. In
this case the heated earth rarefies the air in the lower
strata faster than it can escape, and the flatness of the
ground conduces to the maintenance of the resulting ab-
normal distribution of density. Displacement by mirage
is commonly vertical, but is lateral when the density gradi-

ent is more or less inclined to the vertical. Looming and
fata Morgana are species of mirage. See these words.

The mirrors of the ancients were of polished metal, as are those of the Japanese and some other Oriental nations. Glass mirrors, consisting of transparent glass with a backing of metal to act as the reflecting surface, did not become common until the sixteenth century. Mirrors have been used for decoration of the person, being sewed to the material of the dress and serving as larger and more brilliant spangles; they have also been used in the interior decoration of buildings, especially in Persia and the East Indies (*Compare arabesque*). The common method of preparing glass mirrors is to coat one side of the glass with an amalgam of tin and mercury (called *silvering*) but mirrors are now often made by depositing pure silver on the glass

2 Specifically, in optics, a surface of glass or polished substance that forms images by the reflection of rays of light, a speculum. Optical mirrors are plane, convex, or concave. A plane mirror gives a virtual image whose apparent position is on the opposite side of the mirror from the reflected body and at an equal distance from it. A concave spherical mirror (supposing that it includes only a small part of a large spherical surface) reflects rays parallel to its axis, as those from the sun, to a point (*F* in fig 1) called the principal focus, whose distance from the mirror is equal to half the radius of the sphere

Fig 1 C, center F, focus

of which the surface of the mirror forms a part. Rays proceeding from a luminous point upon the axis beyond the center (*L* in fig 2) are reflected to a focus, *f*, between the center and *F*, and those two points are called *conjugate foci*, since they are interchangeable, a luminous body at *L* has a real inverted and diminished image formed at *f*. If, however, the luminous body be at *f*, the image is formed at *L*, also real and inverted, but magnified. If the luminous body is at *F*, the principal focus, the reflected rays are sent out in parallel lines, if nearer the mirror than *F*, the rays after reflection are divergent, and the image is virtual, erect, and magnified. In a concave parabolic mirror parallel rays are brought exactly to a focus at the geometrical focus, hence this form is suitable for reflectors, as in the headlight of a locomotive. The images formed by convex mirrors are always virtual and smaller than the object.

Also called *Claude glass*.—Conjugate mirror. See *conjugate*.—Cylindrical mirror. See *cylindrical*.—Easel-mirror, a small mirror having a prop or foot fastened to the back of it by a hinge so that, at pleasure, the mirror may be set up on one edge.—Magic mirror. (a) A mirror in which, in various systems of fortune-telling or divination, a person was supposed to see reflected scenes in his future life, or an answer to some question. (b) A Japanese mirror of cast metal, which, when made to reflect the sun's rays upon a screen at a proper distance, shows in the reflection bright images which are counterparts of raised figures or characters on the back of the mirror. These, like all Japanese mirrors are generally circular in form, are about one eighth of an inch thick in the thinnest part, and are usually surrounded on the back by a raised rim. The surface of the mirror is generally slightly convex, and coated with an amalgam of mercury and the metal forming the mirror. The surface is locally modified in its curvature, by the characters either by the shrinkage of the metal in cooling, or by its deformation in the process of amalgamation or of polishing. Only a few of the mirrors which apparently answer to the general description in respect to their construction possess the "magic" property in any great degree.—Boomerang-mirror, in microscopy, a plane mirror of polished steel, smaller than the pupil of the eye, placed before the eyepiece of the microscope to be used like the camera lucida in making drawings.

Chaucer, Prolog to C T, I 767

He's all my exercise, my mirth, my matter
Shak, W T, I 2 166

=Syn. *Mirth, Cheerfulness*

I have always preferred *cheerfulness* to *mirth*. The latter I consider as an act, the former as a habit, of the mind

Mirth is short and transient, *cheerfulness*, fixed and permanent. Those are often raised into the greatest transports of *mirth* who are subject to the greatest depressions of melancholy; on the contrary, *cheerfulness* (though it does not give the mind such an exquisite gladness) prevents us from falling into any depths of sorrow. *Mirth* is like a flash of lightning that breaks through a gloom of clouds and glitters for a moment. *cheerfulness* keeps up a kind of daylight in the mind, and fills it with a steady and perpetual serenity
Addison, Spectator, No 581

= *Syn. 2.* *Misadventure*, *Mishap*, *Misfortune*, *Disaster*, *Calamity*, *Catastrophe*, *misadventure*, ill, harm, reverse, blow, stroke, trouble. The first six words are arranged in the order of strength, they agree in denoting untoward events, produced by causes presumably independent of the sufferer. *Misadventure* is the lightest word for that which is really disagreeable, a *mishap* may be comparatively a trivial thing, both generally apply to the experience of individuals. *Misfortune* is the most general of these words, a *misfortune* is a really serious matter, it may befall a person, family, or nation. A very serious misfortune affecting large numbers is a *calamity*, the central idea of which is wide-spread and general mischief. A *disaster* is not necessarily wide-spread, it is generally sudden, and its importance is in its effects upon other interests as marring or ruining particular plans, hopes, courses, or conditions of things. A *disaster* may befall an individual, a *calamity* can come to an individual only by affecting his welfare largely, or bringing him into deep distress. A *catastrophe* is strictly a great misfortune bringing things to an end, a final crash, a finishing stroke, as this brought on the *catastrophe*. See *affliction*.

Mishnah (mish-ná), *n* [Also *Mishna*, Heb.
mishnáh, repetition, explanation, *< mishnáh*, re-
pent] 1 In Jewish lit., a collection of halach-
oth or binding precepts and legal decisions
deduced by the ancient rabbis from the Penta-
teuch, and itself forming a second or oral law
See *halachah* These *mishnah* which had been pre-
served for several centuries by tradition among the doc-
tors of the synagogue, were gradually committed to writ-
ing The first who attempted to reduce them to order was
Hillel I (c. 75-50 B. C.), president of the Sanhedrin,
who arranged them in six orders or orders The final
redaction, however, was made by Rabbi J. Judah, surnamed
"the holy," about the end of the second century of our era.
The *Mishnah* is divided into six parts, each of which con-
tains a number of treatises, which are subdivided into
chapters, and these again into paragraphs or *mishnoth*
The first part relates to agriculture, the second regulates
the manner of observing festivals, the third treats of wo-
men and matrimonial cases, the fourth of damages and

losses in trade, etc., the fifth is on "holy things"—that is,
oblations, sacrifices, etc., and the sixth treats of the sev-
eral sorts of purification The *Mishnah* forms the text on
which the Gemara is based See *Gemara* and *Talmud*

The *Mishnah* consists chiefly of Halakah, there is,
comparatively speaking, little Agadah to be found in it.
It is not, however, as many think either a commentary
on the Halakic portions of the Pentateuch, or on the
ordinances of the Sopherim, or on both together. It rather
presupposes the knowledge of and respect for both the
Mosaic and the Sopheric laws, and it only discusses, and
finally decides on, the best mode and manner of executing
them.
Encyc. Brit., XVI 503

See *mistress*, *Mrs.*] 1 *Mistress* a reduced form of this title, which, so reduced, came to be regarded, when prefixed to the name of a young woman or girl, as a sort of diminutive, and was especially applied to young girls (corresponding to *master* as applied to young boys), older unmarried girls or women being styled *mistress* even in the lifetime of the mother, later, and in present use, a title prefixed to the name of any unmarried woman or girl. In a restricted use, the title *Miss*, with the surname only, now distinguishes the eldest daughter of a family, the younger daughters having the title *Miss* prefixed to their full name as *Miss Brown*, *Miss Mary Brown*, etc. Some matronly unmarried women, holding independent positions as householders or otherwise, are still styled *Mistress (Mrs.)* as a mark of special respect, at least in some parts of the United States. In speaking or writing of two or more persons of the same name by the title of *Miss*, the plural form is often given to the name as a whole as the *Miss Smiths*, instead of to the title, as the *Misses Smith*.

In the *Mozarabic liturgy*, a variable prayer or address, called more fully the *Oratio Missae* (Prayer of the Mass), answering to the Gallican *Præfatio Missae* (Preface of the Mass). It probably derived its name from the fact that the dismissal (*missa*) of the catechumens originally preceded it.

II. *n.* In the *Rom. Cath. Ch.*, the book containing all the liturgical forms necessary for celebrating mass throughout the year. Origin

nally the ordinary, canon, and some other parts of the mass were contained in the sacramentary, which also included the offices for the other sacraments. In addition to this the antiphony, lectionary, and evangelary had to be used. Early in the eighth century the name of *missal* (*missalis* (sc. *liber*), *missale*) came to be applied to the sacramentary, and later to books containing additional parts of the mass. A book like the modern missal, containing all the forms of the mass, was called a *plenary missal* (*missale plenum*). The modern Roman missal (the reformed missal) was issued substantially in its present form under Pius V in 1570, and revised again under Clement VIII and Urban VIII. It is the only Latin missal allowed to be used in the Roman (Catholic) Church, with the exception of the limited local use of the Ambrosian, Mozarabic, and some monastic rites. Roman Catholic priests in England do not follow the Roman and other ancient English uses, but the present Roman rite. The Uniate and other Latinizing communities in Oriental countries are allowed to retain their ancient offices, with alterations more or less considerable. In the Roman missal, after the introductory matter (calendar, general rubrics, etc.) come the introits, collects, epistles, gospels, graduals, offertories, secrets, communions, postcommunions, etc., throughout the year. The ordinary and canon of the mass are placed in the middle of the book, between the proper of Holy Saturday and that of Easter Sunday. After these masses de tempore follow the common of saints, votive and special masses, etc., and masses allowed to be used in special places. The *euchologion* of the Greek Church answers not to the missal, but to the original sacramentary.

The Sacramentary became subdivided into the full mass book or *missal* properly so named

rope, and some parts of western Asia and northern Africa. Like the fieldfare, mavis, redwing, black bird, and ring ouzel, it is an abundant and well known English thrush. It is the largest European bird of its kind, measuring from 11 to 11½ inches in length and about 1½ in extent of wings. The form is stout, and the coloration most like that of the song thrush, *T. musculus*. The upper parts are grayish brown, gray on the head, and of a yellowish tinge on the rump; there is a whitish streak from the bill over the eye, and the under parts are whitish, profusely spotted with black. Also called, locally, *storm-cock*, *three cock*, *holmthrush*, *screechthrush*.

winter with small white berries containing a glutinous substance. The shrub is said to be disseminated by birds, which eat the berries and disperse the undigested seeds in their droppings. It is found on a great variety of trees, especially the apple tree, but seldom on the oak. The mistletoe (compare def 2) was consecrated to religious purposes by the ancient Celtic nations of Europe, and was held in peculiar veneration by the Druids, especially when found growing on the oak. Traces of this old superstition regard for the mistletoe still survive in European countries, as in the custom of kissing under it at Christmas. It was formerly highly esteemed as an antispasmodic, but is not now so used. It seems, however, to have some pharmacodynamic properties.

 T H Bayly, The Mistletoe Bough

2 A plant of some other species of *Viscum* or of one of the genera *Loranthus*, *Phoradendron*, and *Arceuthobium*, their species almost all having the same parasitic habit. The mistletoe (*Viscum*) mentioned by Latin writers in their account of the Druids is thought by some to have been *Loranthus Europaeus* of southern Europe, said to grow on a species of oak in the south of France. The mistletoe of the eastern United States is *Phoradendron flavescens*, common on various trees, especially the tupelo and red maple. See *gad-bush*.

The mistral derives its peculiar properties from the character of the country over which it blows; it extends from the mouth of the Rhone to the Gulf of Genoa, but is strongest and most frequent over Provence, and especially in the delta of the Rhone. Also written *maestral*.

When the *Mistral* blows, the sky is almost always blue and cloudless and the air very dry: the contrast between the prevailing sunshine and the piercing cold of the wind is very striking. In the Rhone valley every second day is a *Mistral* day; in Marseilles it blows 175 days in the year

ilies, and the elevation of the group to the rank of an order,
a more elaborate nomenclature has been established in
which neither *Acarus* nor *Acaridae* is retained (See *Aca-*
rida). Adult mites are eight-legged like most arachnids,
but some six-legged immature forms at one time consti-
tuted a supposed genus *Leptus* (See *Leptus*, and cut under
harvest tick). The species of mites are very numerous, di-
versified in form, and various in habits. Many are parasitic,
others are terrestrial or aquatic, others live in cheese,
flour, sugar, etc. *Mite* is consequently much used in com-
position. The cheese mite or flour mite is *Tyrophagus* *putrescens*
or *T. longior*. The sugar mite is *Glyciphaga* *granorum*, or
another of the same genus. Such mites compose the fam-
ily *Tyrophagidae* and are among those longer known as
species of *Acarus* or *Acaridae*. Itch mites are *Sarcoptes*,
as *Sarcoptes* *scabiei* (See cut under *itch mite*). Mange
mites are *Demodex*, garden mites or harvest mites
Trombididae spinning mites *Tetranychidae*, beetle mites
or wood mites, *Oribatidae* spider mites, *Gamasidae* water
mites *Hydrachnidae*, snout mites, *Ididae*, gall mites,
Phytidae. Certain mites, the *Ixodidae*, are commonly
distinguished as ticks as *Ixodes* *ricinus* (see cut under *Aca-*
rida), and those of the family *Trombididae* are indifferently
called *harvest mites* *harvest ticks* *harvest bugs* *red bugs*, and
by other names. See the compound and technical names

one-celled ovary with parietal placentae which
are alternate with the stamens, five petals which
are three-lobed or pinnatifid, and a superior cap-
sule without beaks. They are herbs with long petio-
late heart-shaped lobed or crenate leaves which have
membranaceous stipules attached to the petioles, and an
erect slender scape bearing an elongated raceme of small
greenish flowers, which are often drooping. There are 6
species, indigenous to the temperate parts of North Amer-

μῆτρα, a belt, girdle, fillet, head band, turban]
1 A form of head-dress anciently worn by the
inhabitants of Lydia, Phrygia, and other parts
of Asia Minor — 2 A sacerdotal head-dress, as
that worn by the ancient Jewish high priest,
or that worn by a bishop. The Jewish miter was
made of linen, and wrapped in folds about the head like
a turban. Before the fourteenth century the miter in
the Christian church was
low and simple, but now
it consists of a coronet,
surmounted by a lofty and
deply left cap. The privi-
lege of wearing the miter
in the Roman Catholic
Church was a concession
of the popes and was for-
merly exercised by card-
inals and the higher dig-
nities. Bishops and abbots
(if to be mitered) receive the
miter from the consecrat-
ing bishop. Three kinds of
miters are distinguished:
(1) the precious miter, made
of gold or silver plate and
adorned with jewels, (2) the
auriphyrgate miter, and (3)
the simple miter of white
silk or linen. The bishops of
the Church of England wore
miters as late as the coronat-
ion of George III. and some
Anglican bishops occasion-
ally wear them at the present day. See *tiara*, and cut under

miter-board (mī'tēr-bōrd), *n* A miter-box in which a piece is laid while the saw reciprocates between guides which cause it to make the kerf at the prescribed angle E H Knight

miter-box (mī'tēr-boks), *n* In *carp*, a long narrow wooden box consisting of a bottom and two sides in which kerfs at an angle of 45° (or some other angle) are cut for the reception of a saw used in cutting pieces of wood to form miter-joints The piece of wood to be mitred is laid in the box, and the saw, being worked through the guide cuts in the vertical sides, cuts the wood to the necessary angle (See *miter joint*) Another form consists of a bed and a fence, against which the work rests, and an adjustable guide for the saw, so that it admits of cutting at any required angle In painting the name is given to a square channel of wood or iron having diagonal cuts in the sides, in which a saw can move freely in cutting pieces of wood or brass of uniform angles

miter-cut (mī'tēr-kut), *n* In *glass-manuf*, a groove cut in the surface of plate-glass for ornamentation. The cross-section of the groove or cut is very nearly an equilateral triangle

miter-dovetail (mī'tēr-duv'tāl), *n* In *joinery*, a form of concealed dovetail presenting only a single joint-line, and that on the angle E H Knight

miter-drain (mī'tēr-dran), *n* A drain laid within the metaling of roads, to convey the water to the side drains

mitering-machine (mī'tēr-ing-ma-shēn'), *n* 1 In *carp* and *joinery*, a machine for sawing or cutting to a true angle of 45° the ends of pieces to be joined, in order that they may be united by a miter-joint, or for cutting the pieces to any desired angle to make a bevel-joint One form of this machine consists of a table with a circular saw and adjustable guides or fences another consists of a bed and guide with two blades at right angles, for making a downward cut fixed at an angle of 45° to the guide, and actuated by a lever The latter form is used for mitring picture frames and small moldings

2 In *printing*, a mechanism of iron and steel, designed to cut the ends of metal rules with exact bevels and secure true joints at any angle This is done in some machines by a saw, in others by a file or chisel

miter-iron (mī'tēr-ī'ēr-n), *n* A fagot for forging, composed of a group of bars of angular section wedged about a cylindrical bar within a hoop

miter-jack (mī'tēr-jak), *n* A simple form of miter-box or templet, consisting merely of a bed

and a fence, against which the work rests. It is used for making miter-joints on small moldings.

miter-joint (mī'tēr-joint), *n* A joint in which the plane of the abutting surfaces bisects the

angle (properly 90°) formed by the abutting pieces Each of the abutting pieces is dressed to an angle of 45°, when they are dressed to an angle greater or less than 45° they are generally termed *bevel-joints* When the angle formed by the junction of

two parts is 45°, and the plane of division bisects this angle, the joint is sometimes called a *half miter joint* Also called *miter*

miter-mushroom (mī'tēr-mush'rōm), *n* A kind of mushroom of the genus *Helvella*, *H. cuppa* so named from the shape of the pileus It grows in woods, and is delicate eating

miter-plane (mī'tēr-plan), *n* In *carp* (a) A plane in which the bit is set at an acute angle with the longitudinal axis of the stock The effect of this arrangement is to give the action of the plane the character of a draw-out. (b) A plane which runs in a race in angular relation to fences or gages, usually adjustable, by which the stuff to be planed is held to the action of the tool

miter-post (mī'tēr-pōst), *n* Same as *meeting-post*

miter-shaped (mī'tēr-shāpt), *a* Having the shape of a miter and especially of a form of head-dress worn by women in the middle of the fifteenth century

miter-shell (mī'tēr-shel), *n* The turreted shell of a mollusk of the genus *Mitra* or family *Mitrida*, a tiana-shell See cut under *Mitra*

miter-sill (mī'tēr-sil), *n* A raised step against which the foot of a canal-lock gate shuts on the floor of a lock-bay E H Knight

miter-square (mī'tēr-skwār), *n* In *carp*, an immovable bevel for striking upon a piece of stuff an angle of 45°

miter-valve (mī'tēr-valv), *n* A valve of which the lid or plug is the frustum of a cone, the face of the seat being inclined at an angle of 45° to the axis of the valve

miter-wheel (mī'tēr-hwēl), *n* 1 In *mach*, a particular kind of bevel-wheel, the bevel being limited to an angle of 45°, and the teeth of the wheel meshing with the teeth of another of the same bevel and diameter The shafts of the wheels are at right angles with each other, and rotary motion in any plane is by this mechanism, translated, without change of velocity into motion in another plane at right angles with the first. Miter wheels are much used in mill work. See *bevel wheel* and *bevel gear*

This is said recently to facilitate the casting process, and to add to the strength of the metal. The aluminium is added in the form of an alloy of 6 to 10 per cent. of that metal with iron. This alloy is made by a patented process consisting, as is stated, in adding clay to the iron in the process of smelting. The mitis-castings are said to be rapidly taking the place of malleable iron castings.

4 In *chem*, a blending of several ingredients without chemical alteration of the substances, each of which still retains its own nature and properties distinguished from combination, in which the substances unite by chemical attraction, lose their distinct properties, and form a compound differing in its properties from any of the ingredients — 5. In *organ-building*, a flue-stop having two or more pipes to each digital, the pipes being so tuned as to give certain sets of the shriller harmonies of the fundamental tone of the digital, a compound stop. The stop is known as "of two ranks," "of three ranks," etc., according to the number of pipes to a digital. The harmonics chosen for reinforcement vary with the pitch of the fundamental tone, a low tone being provided with higher harmonics than a high one. The points in the compass where changes from one set of harmonics to another take place are called *breaks*. The harmonics usually chosen are those that lie at the intervals of fifths or octaves from the fundamental tone, rarely at those of thirds or sevenths. Mixtures serve two purposes — to enrich the total effect of heavy combinations by reinforcing the brilliant overtones of the harmony, and to emphasize the upper tones of heavy chords by reinforcing their nearer harmonies. They are never properly used except in combination with foundation stops. Mixtures are variously named, as *cornet*, *fur*, *nature*, etc.

J. Smith*, Syn. Disc., p. 564. Specifically, *a mucellany* is a collection of independent literary pieces the unity lying only in their general character. *A medley* is a mixture or collection of things distinctly incongruous; the word has the specific sense of a song or tune made up of scraps of other songs or tunes ingeniously and amusingly fitted together. *Farrago* emphasizes the confusion or indiscriminateness of the mixture or collection. It is applied chiefly to printed or spoken discourse. *Hotchpotch* is a still more energetic expression of the confusion of the collection, the idea being drawn from the boiling together of shreds of all sorts of food. *Jumble* implies the idea of a heap turned over and over till everything is hopelessly mixed. The figurative uses correspond essentially to the literal.

They have 9 primaries, 12 rectrices, a notched tail, and a moderate bill usually notched and furnished with rictal vibrissae. There are many genera and upward of 100 species, all confined to America. They are small and usually brightly colored birds of the woodland, all insectivorous and in temperate and cold regions migratory. They abound in species and individuals in eastern portions of the United States where they form a very characteristic feature of the primavera. Leading genera in that country are *Dendroica*, *Mniotilta*, *Parula* (or *Compsothlypis*), *Protonotaria*, *Helminthophila*, *Helminthophila*, *Geothlypis*, *Icterus*, *Myiophobus*, and *Setophaga*. Also called *Dendroicae*.

Moabite stone, a slab of black basalt bearing an inscription of thirty-four lines in Hebrew Phœnician characters, the oldest monument of the Semitic alphabet. It was found in 1868 at the ancient Dibon of Moab. Before it could be removed it was broken in many places, through the jealousies of Arab tribes but a squeeze of the inscription had been previously taken, and the chief fragments are now in the Louvre Museum. The stone is the most important surviving relic of Moabite civilization, and is believed to date from about 1000 B.C. The inscription records the victories of King Mesha over the Israelites.

3. In *gram*, the designation, by the form of the verb, of the manner of our conception of an event or fact, whether as certain, contingent, possible, desirable, or the like. The *modes* of the English verb are the *indicative*, *subjunctive*, and *imperative*, and other verbal phrases are usually called by the name of *modes*, as *potential*, *conditional*, and so on. See these terms. Also commonly, but less properly, *mod*.

4 The natural disposition or the manner of existence or action of anything, a form as,

heat is a *mode* of motion, reflection is a *mode* of consciousness.

There is something in things which neither is the thing itself, nor another thing, nor yet nothing, but a certain medium betwixt them both. And this used to be called a *mode*; for example, A degree of quality is not quality, nor yet is it wholly nothing, but a *mode*.

Burgesius, tr by a Gentleman

A *mode* is the manner of existence of a thing. Take, for example, a piece of wax. The wax may be round or square or of any other definite figure. It may also be solid or fluid. Its existence in any of these *modes* is not essential. It may change from one to another without any substantial alteration. As the *mode* cannot exist without a substance, we can accord to it only a secondary or precarious existence in relation to the substance to which we accord the privilege of existing by itself per se exists. But though the substance be not restricted to any particular *mode* of existence, we must not suppose that it can exist or at least be conceived by us to exist in none. All *modes* are therefore variable states, and though some *mode* is necessary for the existence of a thing, any individual *mode* is accidental. Sir W. Hamilton, Metaph, viii

I am assured that those *modes* of consciousness which I call perceptions and imaginations, in as far only as they are *modes* of consciousness exist in me. Descartes, Meditations (tr by Veitch), III

5 A combination of ideas. See the quotations.

Modes I call such complex ideas which, however compounded, contain not in them the supposition of subsisting by themselves, but are considered as dependents on or affections of substances. Locke, Human Understanding, II xii 14

There are some [*modes*] which are only variations or different combinations of the same simple ideas, as a dozen, or score, which are nothing but the ideas of so many distinct units added together, and these I call simple *modes*, as being contained within the bounds of one simple idea. Locke, Human Understanding, II xii 5

Combinations of simple ideas of different kinds I have called 'mixed *modes*'. Locke, Human Understanding, II xii 5

6 In *logic* (a) A modification or determination of a proposition with reference to possibility and necessity. (b) A variety of syllogism. See *mood* 2, the more usual but less proper form.

(c) The significate of a part of speech. (d) An accidental determination — 7 In *music*.

(a) A species or form of scale, a method of dividing the interval of the octave for melodic purposes, an arrangement of tones within an octave at certain fixed intervals from each other. Three great systems of *mode* were to be distinguished — the ancient Greek, the Gregorian, medieval, or ecclesiastical, and the modern. These three were successively derived from each other, but with noteworthy changes of both principle and nomenclature. (i) In the Greek system each *mode* consisted of two tetrachords (two whole steps and one half step in each) plus one whole step (the diatonic tone). The nature and the name of the *mode* varied according to the tetrachord used as a basis and according to the position of the diatonic tone, or, in other words, according to the relative order of the whole steps and half steps. When the diatonic tone lay between the two component tetrachords, the *mode* was named simply from the tetrachord used — the *mode* containing Dorian tetrachords was called *Dorian* or *Doric*, etc., but when it lay below or above both of them the prefixes *hypo* and *hyper* respectively were added as *hypodorian*, *hypolydian*, etc. Below is a table of the nine original *modes* reckoned upward, the whole steps being indicated by —, the half steps by v, the constituent tetrachords by —, and the diatonic tone by +.

I Dorian,	— v — — + — — — + — — —
II Phrygian,	— — — — + — — — + — — —

These *modes* were embodied in scales of about two octaves, sometimes called *transpositional scales*, which were more or less susceptible of transposition. By the later theorists fifteen such scales were recognized, each derived from one of the foregoing *modes* and beginning at a different pitch, each a half step higher than the preceding. These scales, though not always differing from each other in *mode*, but only in relative pitch, were also called *modes*, and were named like the *modes* themselves. Assuming the lowest

tone of the lowest scale to be A, the series of later scales or "modes" would be

The fact that the term *mode* has been applied from very early times both to the ideal or true forms, or true modes, and to the practical scales or tonalities based upon them has led to great confusion. Furthermore, the extant data of the subject are fragmentary and obscure, so that authorities differ widely. (The summary here given is taken chiefly from Alfred Richter.) The aesthetic and moral value of the different modes was much discussed by the Greeks and medievalists were written in one or other of the modes according to the sentiment intended to be expressed. (2) The Gregorian, medieval, or ecclesiastical system was originally intended partly to follow the ancient system. Several of the old modes were retained, but subsequently received curiously transposed names. The system was initiated by Ambrose, Bishop of Milan, in the latter part of the fourth century, perfected by Gregory the Great about 600 and still further extended between the eleventh and sixteenth centuries. It exercised a deep influence upon the beginnings of modern music, and is still in use in the Roman Catholic Church. The ecclesiastical modes differ from each other both in the relative position of their "finals" or key notes and in the order of their whole steps and half steps. They are *authentic* when the final is the lowest tone of the ambitus or compass, and *plagal* when it is the fourth tone from the bottom. Four authentic modes were established by Ambrose, the four corresponding plagal modes were added by Gregory, and six others were subsequently appended, making fourteen in all. In each mode certain tones are regarded as specially important—the final, on which every melody must end, and which is nearly equivalent to the modern key note; the dominant, or principal reciting note; and the mediant and participant, on which phrases (other than the first and last) may begin and end. These are generically called *modulations*. All the modes are susceptible of transposition. Assuming the final of the first mode to be A, the full series is as follows (finals are marked F, dominants D, and mediant M)

I Dorian (authentic)	F	M	D
(plagal)	a-b-c-d	e-f-g-a	b-c-d-e
II Hypodorian	F	M	D
(plagal)	a-b-c-d	e-f-g-a	b-c-d-e
III Phrygian (authentic)	F	M	D
IV Hypophrygian	F	M	D
(plagal)	a-b-c-d	e-f-g-a	b-c-d-e
V Lydian (authentic)	F	M	D
VI Hypolydian	F	M	D
(plagal)	a-b-c-d	e-f-g-a	b-c-d-e
VII Mixolydian (authentic)	F	M	D
VIII Hypomixolydian	F	M	D
(plagal)	a-b-c-d	e-f-g-a	b-c-d-e
IX Æolian (authentic)	F	M	D
X Hypocorian (plagal)	a-b-c-d	e-f-g-a	b-c-d-e
XI *Loerian (authentic)	F	M	D
XII *Hypocorian (plagal)	a-b-c-d	e-f-g-a	b-c-d-e
XIII Ionian (authentic)	F	M	D
XIV Hypolydian (plagal)	a-b-c-d	e-f-g-a	b-c-d-e

*Not used, on account of the tritone between B and F

(3) In the modern system only two of the historic modes are retained—the major, equivalent to the Greek Lydian and the medieval Ionian, and the minor (in its full form) equivalent to the Greek and medieval Æolian. These modes differ from each other in the order of their whole steps and half steps, as follows

Major	*-*-*-*	*-*-*-*	*-*-*-*	*-*-*-*
Minor (full or descending)	*-*-*-*	*-*-*-*	*-*-*-*	*-*-*-*
(instrumental)	*-*-*-*	*-*-*-*	*-*-*-*	*-*-*-*
(ascending)	*-*-*-*	*-*-*-*	*-*-*-*	*-*-*-*

See *major minor* and *scale*. (b) In medieval music, a term by which the relative time-value or rhythmic relation of notes was indicated. Two kinds of modes were recognized, the *great* fixing the relation between the notes called "long" and "long," and the *less*, fixing that between those called "long" and "breve," and each of these kinds might also be *perfect* making the longer note equal to three of the shorter, or *imperfect* making it equal to two of the shorter.

3 (a) In *Gregorian music*, one of the tones in a mode with which every phrase of a melody in that mode must begin and end. The regular modulations of each mode include the final, the dominant, the mediant, and the participant, each of which has its own peculiar functions (See these words, and also *mode*) 10 to these are added two other tones in each mode, called *conceded modulations*, which are of minor importance (b) In *mod music*, the act, process, or result of changing, in the course of a piece, from one key (tonality) to another, so that a new tone becomes the key note and the relative significance of all the tones common to both tonalities is altered. When a tone foreign to the original tonality of a piece is used a modulatory effect is nearly always produced. If this effect is carried out into a cadence in the new key, the modulation is called *final*, otherwise it is *passing* or *transient*. All modulations, however, require a return to the original key before the end of the piece. The tone by which the transition is introduced or effected is called the *note of modulation*, this tone in the simpler forms of modulation is usually the fourth or the seventh tone of the new key. The simplicity of a modulation depends upon the closeness of relationship between the keys involved. The simplest modulations are into the keys either of the dominant or of the subdominant, and are effected by sharpening the fourth tone or flattening the seventh tone respectively of the original key. Modulations into the relative minor or into the minor keys of the supertonic or of the mediant are effected by sharpening the fifth, the first, or the second tone of the original key respectively. Numerous other more intricate modulations are possible, especially in instrumental music. A modulation is *abrupt*, *direct* or *extraneous* when it leads into a key not closely related with the original one. It is *deceptive* when it utilizes a series of chords in an unusual and startling way. It is *modale* when produced by the introduction of a tone foreign to the original tonality, and *harmonic* when produced by the use of a chord common to both tonalities first in its relation to one and then in that to the other. It is *enharmonic* when it is effected on an instrument of fixed intonation like the pianoforte, by calling a key (digital) first by one name and then by another as when B₂ in the key of B₂ is called D₂ in the key of B₂. Modulation is one of the most important resources of modern music. It introduces endless variety of both melodic and harmonic effect with great possibilities in the way of sequences and imitations. It increases the unity of a composition and the importance of the original tonality by introducing a temporary disturbance of original tonal relations, with a subsequent complete and emphatic resumption of them. It affords means for the expression of very complex emotional conditions particularly those of unrest, contrast, etc. In the style of Wagner it has often been pushed to the limit of toleration, so as almost to destroy that sense of fixed tonality which is the basis of musical certitude. The most remarkable harmonic convenience for modulation, at least in instrumental music, is a chord of four tones consisting of three minor thirds successively supposed, which is called the *chord of the diminished seventh*. This chord may be regarded as based upon any one of its four tones, which is then the seventh tone of either a major or a minor scale. Its harmonic nature is therefore peculiarly ambiguous and unstable. (c) A musical composition exemplifying modulation—4 Sound modulated, mod-

3 (a) In *Gregorian music*, one of the tones in a mode with which every phrase of a melody in that mode must begin and end. The regular modulations of each mode include the final, the dominant, the mediant, and the participant, each of which has its own peculiar functions (See these words, and also *mode*) 10 to these are added two other tones in each mode, called *conceded modulations*, which are of minor importance (b) In *mod music*, the act, process, or result of changing, in the course of a piece, from one key (tonality) to another, so that a new tone becomes the key note and the relative significance of all the tones common to both tonalities is altered. When a tone foreign to the original tonality of a piece is used a modulatory effect is nearly always produced. If this effect is carried out into a cadence in the new key, the modulation is called *final*, otherwise it is *passing* or *transient*. All modulations, however, require a return to the original key before the end of the piece. The tone by which the transition is introduced or effected is called the *note of modulation*, this tone in the simpler forms of modulation is usually the fourth or the seventh tone of the new key. 2 In *Rom* and *civil law*, and *early Eng law*, the manner or qualifying terms of a gift or disposition of property. The introduction of writing as the instrument of gift or transfer enabled donors to vary the customary legal consequences by expressing an intent as to the manner or mode in which the act should have effect, and that part of the instrument which thus qualified what otherwise would have been the ordinary legal effect was termed the *modus*, and the same term was used to designate the legal qualification thus imposed. Hence, more specifically: (a) The clause in a will or other gift (and the legal obligation created thereby) by which the donor charged an obligation upon the legatee or donee, not as a condition the breach of which would create a forfeiture, but as a personal obligation, which the legatee would assume by accepting the gift. (b) Also, in *early Eng law*, the clause in a conveyance enlarging or restricting the estate which otherwise would be granted by it, as for instance by giving to the donee and his heirs, or his heirs and assigns, or by giving to the donee and only a specified class of heirs. Hence the old common law maxim *modus est conventio vincens legem* and *modus legem dat donationem*, meaning specific qualification and express agreement override the law, or give the law to the transfer. (c) In *eccles law*, the exemption, or partial exemption, from the payment of tithes, termed *modus decimandi* and *modus non decimandi* respectively.

given in Switzerland to an important geological
formation belonging in part to the Mio-
cene and in part to a position intermediate be-
tween the Eocene and the Miocene. The formation
is in places over 6,000 feet thick, and chiefly of lacustrine
origin. The fossil vegetation of the Molasse is of great
interest, being subtropical in character, containing palms
of an American type, and also the coniferous genus *Se-
quoia*, now limited to California. It is the upper mem-
ber of the Molasse which contains these plant remains,
and this part of the series is made up of red sandstones,
marls, and conglomerate (mag. flint). The lower division
of the Molasse is a sandstone containing marine and
brackish water shells

3 Specifically, in founding, the form into which a fused metal is run to obtain a cast. Molds for metals and alloys having a low melting point, as lead, type metal, Britannia metal, etc., are made of iron or plaster of Paris, and may be used many times. Molds for the less fusible metals and alloys as iron, brass, bell metal, etc., are made in sand or loam and are divided into three classes: (a) *Open molds*, in which the pattern is impressed in the sand and withdrawn, and the molten metal is then poured in and finds its level; (b) *Close molds*, or molds in two parts called the *drag* and the *cope* (or *cope*), forming together a two part flask, one part being placed over the other, and each being impressed with one half of the matrix or pattern. See *flask*, 2. (c) *Loam molds*, or molds built up with a core of brickwork or other material, and covered with foundry loam. As in the case of open molds, with close molds a pattern usually of wood, is used, being impressed one half at a time in the two parts of the flask or molding box, which, when put together so as to correspond, form the mold. Loam molds are used especially in making large hollow castings and do not require a pattern. The so molds are of every shape and size, from molds for kettles and water pipes to those for engine cylinders and great cannon. Fine molds for making castings of insects, flowers and other delicate objects are formed by suspending the object in a box by means of wires and covering it with plaster of Paris. When set the mold is heated until the object is burned, and the ash is then blown out, leaving the original shape in the mold. Another method is to fashion the figure in wax, bed it in plaster or clay, and then melt out the wax (*see perdu*). In making plaster casts of parts of the human body, or of sculptors' models, the original mold requires to be cut to remove it from the object and the parts are afterward fitted together. Gelatin, paper mache, and sulphur are also used for making certain kinds of molds. The type mold of type-founders is of steel in two pieces, making right and left halves, on the top of which, when conjoined the matrix is attached. Every body of type has its special mold, which can be used for that body only, but the mold is made adjustable for the varying widths of type.

Details of Type mold

4. In terra-cotta work, the plaster forms used in making terra-cotta architectural ornaments. They are usually in a number of parts, and when the clay is set sufficiently the mold is carefully taken apart. Similar molds are used also for glass, pottery, and waxwork

5 In stucco-work, a templet or former for shaping cornices, centerpieces, etc. — 6 In paper-manufacture, a frame with a bottom of wire netting which is filled with paper-pulp that in draining away leaves a film of pulp which is formed into a sheet of paper — 7 In ship-building, the pattern used in working out the frames of a vessel — 8. A former or matrix used in various household operations, as an incised stamp of wood for shaping and ornamenting parts of butter, or a form of metal, earthenware, etc., for giving shape to jellies, blanc-mange, icces, etc. — 9 In cookery, a dish shaped in a mold, as a mold of jelly

II. *n* A native or an inhabitant of Moldavia mold-board (möld'börd), *n* 1 The curved board or metal-plate in a plow, which turns over the furrow — 2. In founding, the board on which the pattern for a mold is laid, a follow-board mold-box (möld'boks), *n* A box used in casting steel under pressure for the manufacture of guns, etc. As devised by Sir Joseph Whitworth this is a cylindrical box in which melted crucible steel or Siemens Martin process steel is subjected to a hydrostatic pressure of 6,000 pounds per square inch. Two closely fitting hoops of steel of ample strength are fitted on the interior with cast iron lags having vertical channels on the faces fitted to the hoops, and numerous channels leading from the vertical channels to the interior of the mold box. The interior surfaces of the lags are lined with refractory sand. A central core of cast iron faced with refractory sand, and provided with horizontal and vertical channels like the lags is erected in the box, leaving an annular space into which the metal is run. By means of a hydraulic press an annular piston or plunger is driven down upon the upper surface of the molten metal. The

gases which would otherwise be retained in the metal are thus forced out, escaping through the channels in the lags and the core.

mold-facing (môld'fā'sing), *n* In *iron- and brass-founding* (a) A thin coating of finely pulverized material dusted upon the inside faces of molds, to insure smooth outside surfaces on the castings. For iron, powdered charcoal and mill dust, and sometimes plumbago, are used. For brass, pease meal, powdered soapstone, rosinstone, graphite, and chalk are variously employed. (b) A wash of plumbago and water laid on the faces of a mold by gentle manipulation with a soft brush, and allowed to dry before the cast is made.

moldiness, mouldiness (môl'di-nēs), *n* [*< moldy¹ + -ness* Cf *moldiness*] The state of being moldy, moldy growth, minute fungi. See *mold²*

2 Anything cast in a mold, or anything formed as if by a mold — 3 In *arch*, a member of construction or decoration so treated as to introduce varieties of outline or contour in edges or surfaces, whether on projections or in cavities, such as on cornices, string-courses, bases, door- or window-jambes, lintels, etc. In classical architecture moldings are divided into three classes: the *right lined*, as the fillet, torus, listel, regula, the *curved* as the astragal or bead, the torus, the cavetto, the quarter round, ovolo, and echinus, and the *compound*, as the ogee, talon, or cyma reversa, the cyma recta or doucine, and the scotia or trochilus, all of which are known by many synonymous

names. In Roman architecture all curved moldings are formed of portions of circles, while in Greek architecture they are for the most part formed of some conic section, of which the curve, in good work, is always of extreme refinement. All these moldings are frequently on

riched by carving. In the architecture of the middle ages there is very great diversity in the form and arrangement of the moldings. In the Norman style they consist almost entirely of rounds and hollows, variously combined with splays and fillets, a striking peculiarity of this style being the recurrence of moldings broken into zigzag lines. In the succeeding English style, the early Pointed, the moldings are much lighter and more boldly cut. In the Decorated style of the fourteenth century there is still greater diversity and this period is further characterized by the introduction of the *roll molding*, and another termed the *reverse molding*. In the Perpendicular style large and often shallow hollows prevail, and the moldings are in general of flatter profile and less effective than those of earlier periods. The moldings of medieval architecture are very commonly sculptured with surface ornament beautiful in design and elaborate in workmanship. See cuts under *dog tooth*, *double cone*, *egg*, *walrused*, *heel-molding*, *lozenge*, *fret*, *3*. **Beit-molding**, a molding passing entirely around the interior of a passenger car, directly above the windows. **Car Builder's Duet** — **Dovetail-molding**. forms an undulating or wavy line. Introduced in corbel tables and archivolts — **Baking molding**, a molding inclined from the horizontal or vertical, as that which often follows the line of a staircase, the rail of an ascending balustrade, etc.

molding-bed (môl'dug-bed), *n* A machine for working rectangular moldings in marble. A traveling frame carries revolving grinders, and is adjustable vertically by a screw to the height required by the thickness of the marble. The grinders are solid cylinders of cast iron and are counterparts of the required moldings.

molding-board (môl'dug-bôrd), *n* Same as *mold-board*.

molding-box (môl'ding-boks), *n* In *foundry-work*, a molding-flask.

molding-crane (môl'ding-krân), *n* A crane adapted for use in a foundry in handling molds and flasks, a foundry-crane.

molding-cutter (môl'ding-kut'tér), *n*. A tool working on the principle of the plane-iron or cutter of a hand-plane, the edge of which is formed by a bevel on one side of the tool. The edges of molding cutters are formed to correspond with the outline of the cross sections of the moldings to be cut, each cutter being adapted to only one pattern of molding. Thus, to cut a molding of semicircular cross-section, the edge of the cutter must be a semicircle of the exact size of the molding. Such moldings were formerly cut by hand-planing but this is now almost entirely superseded by power planing machines with rotary cutters.

molding-file (môl'ding-fil), *n* A file with a concave face used for finishing molded surfaces.

molding-flask (môl'ding-flask), *n*. 1 Same as *flask*, 2 — 2 In *dentistry*, a jointed receptacle in three parts, in which the vulcanite model and plaster mold are secured in making dentures ready for the muffle. *E H Knight*

molding-frame (môl'ding-frâm), *n* In *foundry-work*, the template by which an object is shaped in loam-molding. *E H Knight*

molding-hole (môl'ding-hôl), *n* In *foundry*, an excavation in the foundry-floor in which castings of large size are made.

molding-loam (môl'ding-lôm), *n* A mixture of clay and sand employed by foundries in constructing molds for loam-molding.

molding-machine (môl'ding-ma-shên'), *n* 1 In *wood-working*, one of a class of high-speed power-machines for planing, recessing, shaping molding, profiling, and punching wood. Such machines occupy in wood working much the same position as the milling machine in metal work, as both operate by means of revolving cutters. In molding machines all the work is performed by revolving cutter heads having variously shaped knives. These cutters are used singly as in some panel machines, and project through the table on which the work is laid or they are arranged in gangs and series so that the wood in passing through the machine is exposed successively to all the cutters. By this gang system of cutters it is possible to cut moldings and edgings of the most complicated pattern. The form of the machine has the cutters between the cutter arbor bearings, and is known as a *machining machine* or *wood planing machine* or an *inside molding machine*. In another form the cutters project up through the table and are arranged to work upon the inside edges of moldings. This type is known as the *edge molding machine*. Some times called *curving machine*, *curvity planer*, or *relief planing machine*.

2 A machine for making molding from an artificial composition. The material is forced from a hopper by a compressor, is carried by an apron beneath a die wheel, and after being shaped by this it is delivered on a table.

3 In *sheet-metal working*, a rolling-machine with shaped rollers of which one is the counterpart of the other, for molding sheet metal into shape for cornices, balusters, etc. — 4 In *foundry* (a) A machine for making loam-molds in flasks from small patterns carried by the machine. (b) A gear-molding machine — **Gear-molding machine**, an apparatus for molding large gear wheels from a pattern of a small section of the gear, as of two teeth and the incidental space. **Stone-molding machine**, a machine for working stone moldings. It resembles one form of stone saw, but differs from it in having the frame which carries the revolving grinder adjustable, by means of a screw, beneath the thickness of the slab. The grinder is kept constantly supplied with moist sand — **Surface-molding machine**, a form of molding machine with double edged cutters and a rapid reverse motion. It is used to cut scrolls and plain or molded designs on the surface of solid wood, to rout such work as ends of posts and stairs to form grooves for inlaid work to make tracings for carving, etc.

molding-mill (môl'ding-mil), *n* A sawmill or shaping-mill for timber.

molding-plane (môl'ding-plân), *n* In *joinery*, a plane used in forming moldings, a *match-plane*. Such planes have various patterns of convex and concave soles for making the different parts of moldings, as hollows and rounds.

molding-plow (môl'ding-plou), *n* A plow with two mold-boards to throw the soil to both sides at once, a *ridging-plow*. It is used in forming ridges, in hilling potatoes, etc.

molding-sand (môl'ding-sand), *n* A mixture of sand and loam of which molds for use in a foundry are made.

molding-saw (môl'ding-sâ), *n* A circular saw or combination of circular saws for cutting out blocks approximating to the shapes of ornamental moldings. The molding is finished by cutters formed to the exact curve.

molding-table (môl'ding-tu'bl), *n* A table on which a potter molds his ware. It has a trough in which the workman moistens his hands, and a block and stock board on which he places the tile mold. There are also four pegs driven into the table at the corners of the block and stock board to sustain the mold and regulate the thickness of the tile.

mold-loft (môld'loft), *n* A large room in a ship-building yard in which the several parts of a ship are drawn out in their proper dimensions from the construction drawings. Also called *molding-loft*.

[The various problems [of laying off] are solved upon the floor of a building, known as the *Mold Loft*, where the drawings furnished by the designer are transferred in chalk lines in full size, and then by the aid of geometry, and in the manner discussed in the following pages, the draughtsman determines and draws in the shapes of the various components of the frame. Molds are made to the lines, and with these molds and other data furnished by the draughtsman the workmen are enabled to trim the timbers, or bend the angle irons, and place such marks upon them as shall leave nothing but the putting together and fastening them in their places in order to construct the frame of the ship.

A homogeneous body is regarded as made up of similar molecules, whose relations determine its physical qualities, and particularly its physical state as a gas, liquid, or solid A gas, according to the kinetic theory of gases is composed of molecules darting about in paths which are very nearly rectilinear through the greater part of their lengths Liquids are supposed to be composed of molecules which wander about, but have not nearly rectilinear paths, while solids are believed to be composed of molecules bound together by cohesion and moving in quasi orbital paths A molecule of any substance is conceived as made up of one or more atoms, whose relations to each other are considered in chemistry (See *atom*.) The exact nature of the molecules is still largely a matter of hypothesis, but as regards their size Sir William Thomson has reached a quasi definite conclusion as follows "If a drop of water were magnified to the size of the earth, the molecules or granules would each occupy spaces greater than those filled by small shot and smaller than those occupied by cricket balls"

A molecule may consist of several distinct portions of matter held together by chemical bonds So long as the different portions do not part company, but travel together in the excursions made by the molecule, our theory calls the whole connected mass a single molecule. *Clerk Maxwell*, *Heat*, p. 286

The *molecule* of any substance is, by some chemists, defined as being the smallest portion of that substance to which can be attributed all the chemical properties of the substance, by others, as the smallest portion which, so long as the substance is chemically unchanged, keeps together without complete separation of its parts

Others are Indian and African, of the genera *Heterocephalus* and *Rhinomyia*. The bathyergues are mole-rats of the subfamily *Bathyerginae*, inhabiting Africa, as the strand mole rat, *Bathyergus maritimus*, and species of the genera *Hehodipus* and *Georchus*.

2. A fossorial murine rodent of the family *Muridae* and subfamily *Syphninae*. It resembles the preceding superficially and in habits to some extent. These mole rats are confined to the palaearctic region where they are represented by the genera *Syphnus* and *Ellobius*. The soker, *S. apulcus*, is the best-known.

3. The Australian duck-mole or duck-billed platypus, *Ornithorhynchus paradoxus*.

mole-shrew (mōl'shrō), *n.* 1. An American short-tailed shrew, of the family *Soricidae* and genus *Blarina*, somewhat resembling a small mole. *B. brevicauda* is the largest and best-known spe-

cies, common in the United States and Canada. See cut under *Blarina*.

2. Any American mole, a shrew-mole. All the American *Talpidae* (genera *Scalops*, *Scapanus*, and *Condylura*) differ from the Old World moles and somewhat approach shrews in character. The name is also applied to *Neurotrichus gibbes*, which is of a different family (*Soricidae*).

moleskin (mōl'skin), *n.* and *a.* 1. The skin of a mole—2. A kind of fustian, double-twilled and extra strong, and cropped before dyeing. Compare *beaver-teen*, 2.

II. *a.* Made of or resembling moleskin as a moleskin vest, a moleskin purse.

mole-spade (mōl'spād), *n.* A spade or spud used in prodding for moles, or in setting traps for them.

Poor Menaphon neither asked his swaynes for his sheep, nor took his *mole spade* on his neck to see his pastures.

Greene, Menaphon, p. 11

molest (mō-lest'), *v.* 1. [*ME.* *molesten*, < (*OF.* *molest*), *F.* *molester* = *Sp.* *Pg.* *molestar* = *It.* *molestare*, < *L.* *molestare*, trouble, annoy, molest, < *molestus*, troublesome, < *mōles*, a burden, difficulty, labor, trouble see *mole* 3.] To trouble, disturb, harass, vex, meddle with injuriously.

F. *molestation*, < *ML.* **molestatio* (*n.*), < *L.* *molestari*, trouble see *molest*, *v.* 1.] The act of

molesting—2. The state of being molested,

annoyance, vexatious interference.

The knight and his companion, having reached the castle, now passed the bridge, and entered the gate without molestation.

Macle, tr. of Ariosto's Orlando Furioso, xiv, note 8

3. In *Scots law*, the troubling or harassing of

one in the possession of his lands. An action of

molestation lies chiefly in questions of common or of

converted marches or land boundaries. = *Syn.* 1. See *tease*.

molester (mō-les'tēr), *n.* One who molests,

disturbs, or annoys.

Surely to every good and peaceable man it must in na-

ture needs be a hateful thing to be the displeaser and mo-

lester of thousands. *Milton, Church Government*, ii, Pref.

molestful (mō-les't'ful), *a.* [*ME.* *molest* + *-ful*]

moleynet, *n.* A Middle English form of *mullin*.

moli (mō'lī), *n.* [Native name.] A small tree,

Dracena Schizantha, growing in elevated re-

gions in the Somali country, Africa. It yields a

sort of dragon's blood, said not to be exported, yet remem-

bling, if not identical with that known as *dragons*

blood, attributed to *Dracena Umbel* of the island of Socotra.

Molidæ (mōl'id-ē), *n. pl.* [*NL.* < *Mola* + *-idæ*]

A family of gymnodont plectognath fishes, of

the superfamily *Molodidae*, the sunfishes, head-

fishes, mole-buts, or moloids. They have a com-

pressed oblong body longer than high, and a posterior mar-

ginal or caudal fin between the dorsal and anal, supported

by corresponding interapical bones (in the adult at least 4 or 5 above and 8 or 9 below) and connected with the posterior surface of the neural and hemal spines of the last complete (typically 16th) vertebra. The family contains several fishes of remarkable appearance, whose body ends behind so abruptly that it seems as if cut off. The best-known, *Mola rotunda*, attains great size, sometimes weighing 700 or 800 pounds. It is best known by the name of *sunfish*. Other species belonging to two different genera, are smaller. The family is also named *Orthogoriscidae*, and is synonymous with the subfamily *Cephalinae*. See cut under *Mola*, 2.

Molièresque (mō-lī-ā-sk'), *a.* [*CF.* *Molière* (see *def.*) + *-esque*] Pertaining to or resembling Molière (Jean Baptiste Poquelin, called Molière, 1622-73), the greatest comic writer of France, or his plays.

Chaplin and Turcaret are unquestionably *Molièresque* though they are perhaps more original in their following of Molière than any other plays that can be named.

Molinia (mō-lī'nī-ā), *n.* [*NL.* (Schrank, 1789),

named after J. Molina, a writer upon Chilean

plants and animals.] A genus of grasses of

the tribe *Poaceae* and the subtribe *Enagrostae*,

characterized by an elongated narrow panicle,

small spikelets with from two to four flowers,

and awnless glumes, the empty ones being

slightly smaller than the flowering ones. There

is but a single species, *M. caerulea*, found throughout

Europe and variously named *blue* or *purple* *mole grass*,

purple *mole grass*, and *Indian grass*. It is a rather coarse

stiff perennial, often three feet high, having narrow flat

leaves which are chiefly radical and form large tufts.

It is common in woods, on moors and in wet heathy

places, but is of little agricultural value.

Molinism (mō-lī-nizm), *n.* [*CF.* *Molina* (see *def.*)

+ *-ism*] The doctrine, propounded in 1588 by

Luis Molina, a celebrated Spanish Jesuit, that

the efficacy of divine grace depends simply on

the will which accepts it—that grace is a

free gift to all, but that the consent of the will

is requisite in order that grace may be effica-

cious.

Molinist (mō-lī-nist), *n.* [*CF.* *Molina* (see *Molin-*

ism) + *-ist*] One who holds the opinions of

Molina in respect to grace, free will, and pre-

destination. See *Molinism*.

Molinist (mō-lī-nist), *n.* [*CF.* *Molinos* (see *def.*)

molline (mol'in), *n* [Cf *L. mollis*, soft, + *-ine*] 2

A base for ointments used in the treatment of skin-diseases. It is essentially a soft soap mixed with excess of fat and glycerin. It is made of caustic potash lye having a specific gravity 1.45, glycerin, and coconut oil in the proportions 100 parts of oil, 40 parts of lye, and 30 parts of glycerin. The saponification of the oil is carefully performed without heat. The glycerin is afterward thoroughly incorporated by carefully heating and mixing, and the result is a yellowish white substance of soft consistency containing 17 per cent of uncombined oil, which is easily removed from the skin by either warm or cold water.

It is necessary to say that no lard is ever used, a substitute being found in a saponaceous preparation which is known under the name of *molline*.

Mollinedia (mol-i-nē'di-ä), *n* [NL (Rinz and Pavon, 1794) named after F. Mollinedo, a Spanish chemist and naturalist] A genus of dicotyledonous apetalous plants of the natural order *Monimaceae* and the tribe *Monimieae*, characterized by sessile or stalked drupes on a disk-shaped receptacle, from which the perianth falls off like a lid, by subsessile anthers with the cells united into one at the apex, and by an indefinite number of stamens. They are trees or shrubs, with opposite leaves and insignificant green flowers, which are usually dioecious and grow in axillary or subterminal clusters. There are 30 species, natives of Australia and the warmer parts of America. Several species are highly aromatic, like the nutmeg. See *ink berry*.

Mollugness (mol-ü-jin'ë-ë), *n* pl. [NL (Fenzl, 1840), < *Mollugo* (Mollugin-) + *-ea*] A tribe of dicotyledonous polypetalous plants of the natural order *Ficoidae*, characterized by a deeply five-parted calyx, and by having from three to five petals, or sometimes none, and hypogynous or partly perigynous stamens. It includes 14 genera. *Mollugo* being the type and about 78 species, the majority of which grow in Africa, but a few genera, as *Mollugo* and *Glinus*, are very widely distributed.

Mollugo (mo-lü'gö), *n*. [NL (Linnaeus, 1737), < *L. mollugo*, a plant also called lappago, < *mollis*, soft] A genus of plants of the natural order *Ficoidae* and the tribe *Mollugineae*, characterized by a capsular fruit, a three- to five-celled ovary containing many ovules, and stipulate leaves which often appear to be whorled. They are erect or diffuse herbs usually having forked branches, linear-ovate or spatulate leaves, and inconspicuous greenish flowers in axillary umbel-like cymes. About 18 species have been enumerated, which are common in the warmer parts of the globe. *M. verticillata* is common throughout the United States. See *carpet weed*, and *Indian chickweed* (under *chickweed*).

mollusc, *n* See *mollusk*.

Mollusca (mo-lus'ka), *n*. pl [NL, pl of *molluscum*, a soft-bodied animal, a mollusk see *mollusk*] One of the leading divisions of invertebrate animals; an extensive series of invertebrates whose bodies are soft, without any jointed legs, and commonly covered with a hard

shell in one, two, or more pieces, and whose principal parts are neither segmented into a series of longitudinal rings, as in insects, crustaceans, and worms, nor radiately arranged as in echinoderms; the mollusks, as the univalve or bivalve shell-fish of ordinary language. Mollusks have no trace of a notochord or urochord, which distinguishes them from certain organisms, as ascidians formerly classed with them. They are primitively bilaterally symmetrical, or have a right and left "side" along a main axis. This form is best expressed in the chitons, and is evident in bivalves, slugs, etc., but its expression is often obscured by a twisting to which the body is subjected in various univalves as those whose shells are spiral (See *Impleura*, *Antaepleura*). There is always a well defined alimentary canal, with definite walls. A nervous system is well developed as a set of ganglia with connecting commissures, one characteristic feature of which is the formation of a nervous ring or collar around the gullet, and another is the torsion of the visceral commissures in those forms whose bodies are twisted as above said (See *Euthyneura*, *Streptoneura*). Most mollusks have a distinct head, which, however, is not apparent in bivalves, leading to a division of headless mollusks (*Acephala* or *Lepocephala*). A characteristic organ of *Glossophora* or mollusks with heads is the odontophore, buccal mass, or lingual ribbon, whose radula serves as a rasping-organ in a mouth otherwise soft and toothless. Various modifications of the radular teeth give rise to several descriptive terms (See *stenoglossate*, *rachyglossate*, *rhynchoglossate*, *terraglossate*). There is always a heart, with a ventricle and at least one auricle, and dorsal in position. Its relative situation with respect to the gills differs in certain groups of mollusks (See *opisthobranchiate*, *prosobranchiate*). The circulation is double. The respiratory system is branchial, and in some cases, as of snails and slugs, modified for breathing air into a kind of lung (See *Pulmonata*, *Gastropoda*). The primitive typical gills are paired organs called *ctenidia*, but these undergo many modifications, and their function of respiration may be assumed vicariously by other parts of the body not homologous with them. These modifications give rise to the names of many subordinate groups of mollusks, especially of gastropods, besides that of the great series *Lamellibranchiata*. The renal organs of mollusks are technically called *nephridia*, or organs of *Bojanus* (See cut under *Lamellibranchiata*). The sexual organs are developed, either in the same individuals or in different individuals of opposite sexes. The characteristic organ of locomotion is the foot or *podium*, a development of the under surface of the body, which may be a broad flat sole (see cut under *Gastropoda*), upon which the mollusk creeps, or otherwise shaped. It is often wanting, as in the oyster, or may give rise to a thready byssus by which the animal is rooted, as in the mussel. Forms of the podium give names to most of the leading groups of mollusks, as *Cephalopoda*, *Pteropoda*, *Scaphopoda*, *Heteropoda*, *Gastropoda*, and *Pelecypoda*. A large part of the soft integument of mollusks forms what is called the *mantle* or *velum*, from which the shell, when present, is developed (see *metapropallate*, *metapallate*), and the impression of the edge of the mantle on the inside of the shell is the *pallial line*. Some mollusks are entirely naked or have only a rudimentary and concealed shell, as land slugs and sea slugs, and also most of the living cephalopods. The body of cephalopods is strengthened by an internal skeleton, the calamary or cuttlebone, though no mollusk has an articulated internal skeleton. But the great majority of mollusks have a hard shell (whence the old names *Testacea*, *Ostracodermata*), of a horny or chitinous or more rarely of a calcareous substance. Those whose shell is single are called *univalves*, those in which it forms a hinged pair of shells are *bivalves*, but the former may have an additional shelly piece, losing the aperture, the *operculum*, and the two main valves of the latter may be supplemented by accessory valves (see cut under *accessory*). Bivalves are the natural group of headless or lamellibranch mollusks, but *univalves* include several orders, though the word is chiefly used of the numerous and conspicuous gastropods. A few mollusks are technically *metabivalves*, such as the chitons, hence called *Polyplacophora*, having several segments of the shell in lengthwise series (See cut under *chiton*). Cirripeds used to be considered multivalve mollusks. The shell is usually covered outside with a rough skin or *epidermis*, inside it may be beautifully lustrous, as with mother-of-pearl. Most mollusks live either in salt, brackish or fresh water, and mollusks are mostly found in damp places. Most are locomotory, either by creeping or by swimming, some swim by flapping their shells, others by moving various appendages, many adhere to or even burrow deeply in rocks, a few are parasitic. Some are carnivorous, others herbivorous, most are oviparous, a few ovoviviparous. Many are important as food, and the shells of many are put to useful or ornamental purposes. Certain bivalves furnish pearls. The *Mollusca* have been variously rated, limited, and classified, at one time the bodies of the animals were differently named from their shells (See *Limax*). (1) The name was originally proposed by Jouson in 1650 for naked cephalopods and for *Aplysia*, and adopted by Linnaeus in 1758 as his second order of *Vermes*, including similar naked forms and some heterogeneous elements. Linnaeus made the *Testacea* or shelled mollusks his third order of *Vermes*, and those two groups were combined as a class by Poir in 1791. (2) About 1800 Cuvier made *Mollusca* the second of his four branches of the animal kingdom, with seven classes, *Cephalopoda*, *Gastropoda*, *Pteropoda*, *Acephala*, *Brachiopoda*, *Nuda* and *Cyrrhopoda* (the *Nuda* being ascidians, and the *Cyrrhopoda* being crustaceans). (3) In Lamarck's system, 1819, *Mollusca*, as a class, were exclusive of the bivalves (called by him *Conchifera*), and were divided into five orders *Pteropoda*, *Gastropoda*, *Trachelispoda*, *Cephalopoda* and *Heteropoda*. (4) In 1839 Swainson extended *Mollusca* to all invertebrates except the articulate. (5) The cirripeds having been recognized as crustaceans by Thompson in 1830, and the same naturalist having at the same time investigated the polyzoans, the relation of the latter to the brachiopods led H. Milne Edwards in 1844 to associate the two Cuvierian groups *Brachiopoda* and *Nuda* with the *Polyzoa* in a division called *Molluscoides* (the vertebrate affinities of the *Nuda* or ascidians not being recognized till much later, in 1860). (6) These dissociations from *Mollusca* in a former

sense have left the group now generally recognized and as above defined. It is regarded as a phylum whose main divisions are classes. These main groups are, in one series of headless mollusks, *Acephala* or *Lepidophala*, the single class variously called *Conchifera*, *Lemellibranchiata*, *Elatobranchia*, *Pelecypoda*, *Cornuopoda*, and by other names of bivalves, and, in another series, *Cephalophora*, *Odontophora* or *Glossophora* the four classes *Gastropoda*, *Scaphopoda*, *Pteropoda*, and *Cephalopoda*. But from among the gastropods are to be taken the chitons (together with *Neomenia* and *Chetodermis*), unless *Gastropoda* is used in a very broad sense, and some authors also dissociate the heteropods as a class. See further under the above technical names.

molluscoid (mo-lus'koid), *a.* and *n.* [*NL molluscum*, mollusk, + *Gr* εἶδος, form] *I. a* 1 Like a mollusk; molluscan or molluscous — 2 Specifically, as much like a mollusk as a brachiopod or a moss-animal is; pertaining to the *Mollusca*, *Malacozoa*, or having their characters

II. n. An animal of the group *Molluscoidea* in any sense

Molluscoidea (mol-us-ko'i'de), *n.* *pl* [NL see *molluscoid*] Same as *Molluscoidea*

molluscoid (mol-us-ko'i'de), *a.* [*L. molluscoid* + *-al*] Same as *molluscoid*

molluscoidan (mol-us-ko'i'de-an), *a.* and *n.* Same as *molluscoid*

Molluscoidea (mol-us-ko'i'de-a), *n.* *pl* [NL, *L. Mollusca* + *-oidea*] A subkingdom or branch of the animal kingdom related to the *Mollusca* a proper, constituted by Henri Milne-Edwards in 1844 for certain animals which had before been included in *Mollusca* (a) At first embracing the classes of brachiopods, polyzoans or bryozoans, and tunicates or ascidians (b) Restricted to the tunicates and polyzoans (c) Restricted to the brachiopods and polyzoans (d) Further restricted to the brachiopods alone

molluscoidean (mol-us-ko'i'de-an), *a.* and *n.* *I. a* Same as *molluscoid*, 2

II. n. Same as *molluscoid*

Molluscoidea (mol-us-ko'i'de), *n.* *pl* [NL, *L. Mollusca* + *-oidea*] The original form of the word *Molluscoidea* or *Molluscoidea* H. Milne-Edwards, 1844

molluscous (mo-lus'kus), *a.* [*L. molluscus* + *-ous*] Same as *molluscan* as, *molluscous* softness or flabbiness

A *molluscous* man, too suddenly ejected from his long accustomed groove, where, like a toad imbedded in the rock, he had made his niche exactly fitting to his own shape, presents a wretched picture of helplessness and shiftiness. *Saturday Rev*

molluscum (mo-lus'kum), *n.* [NL, neut of *L. molluscus*, soft see *mollusk*] In *pathol*, a term applied to certain soft cutaneous tumors of slow growth without constitutional symptoms — **Molluscum adenosum**. Same as *molluscum epitheliale* — **Molluscum albinosum**. Same as *molluscum fibrosum* — **Molluscum bodies**, peculiar round or oval bodies, sharply defined and of a fatty appearance, seen under the microscope among the contents of the tubercles of molluscum epitheliale — **Molluscum contagiosum**. Same as *molluscum epitheliale* — **Molluscum epitheliale**, an epidemic growth in the form of papules and tubercles from the size of a pinhead to that of a pea, or rarely larger, pallid and waxy in appearance, and containing molluscous bodies. It has been said on questionable evidence to be contagious — **Molluscum fibrosum**, an affection of the skin consisting of sessile, painless, soft or sometimes firm fibromata, from the size of a pea to that of an egg or larger — **Molluscum non-contagiosum** or **pendulum**. Same as *molluscum fibrosum* — **Molluscum sebaceum** or **sessile**. Same as *molluscum epitheliale* — **Molluscum simplex**. Same as *molluscum fibrosum*

mollusk, mollusk (mol'usk), *n.* [*F. mollusque* = *Sp. molusco* = *Pg. I. mollusco*, *L. molluscum*, a mollusk (cf *L. molluscum*, a fungus which grows on the maple-tree, *mollusca*, a nut with a thin shell), neut of *L. molluscus*, soft, *L. mollus*, soft see *moll?*] A soft-bodied animal, usually with an external shell, a member of the *Mollusca* in any sense. See *Mollusca* — **Articulated mollusks**, a former name of De Blainville's *Valentozoa*, comprising the cirripeds and the chitons, unnaturally associated. See *Nemalopoda*, *Polyplozophora* — **Hemal mollusks**, those mollusks (and supposed molluscoidea) whose intestine has a hemal flexure, as the heteropods, many gastropods, etc. — **Neural mollusks**, those mollusks and molluscoidea whose intestine has a neural flexure. They are the cephalopods, pteropods, pulmonates, and lamellibranchs, together with brachiopods and polyzoans.

molluskigerous (mol-us-ki'e-rus), *a.* [*Prop. molluscigerous*, *L. molluscum*, a mollusk, + *L. gerere*, carry see *-ger*, *-gerous*] Having or bearing mollusks specifically applied by Huxley to the elongated tubular sacs occasionally found attached by one end to an intestinal vessel of an echinoderm, *Synapta digitata*, and con-

taining the ova or embryos of the molluscan parasite *Entoconcha mirabilis*

moll-washer (mol'wash'er), *n.* The washer or wagtail, a bird. Also called *molly wash-dish*, etc. [*Local, Eng*]

moll-wire (mol'wir), *n.* A pickpocket who robs women only [*Thieves' slang*]

Molly (mol'i), *n.* [*Dim. of Moll*, or var of the orig *Mary* see *Moll*] 1 A familiar form of the feminine name *Mary* — 2. [*I. c*, *pl. mollies* (-iz)] The wagtail, a bird as, the yellow molly (the yellow wagtail); the molly wash-dish (the pied wagtail) [*Local, Eng*]

molly (mol'i), *n.* *pl. mollies* (-iz) [*Abbr. of mollymuck, malle-muck*] The malle-muck or fulmar, *Fulmarus glacialis*. See *fulmar*

molly (mol'i), *n.* *pl. mollies* (-iz) [*Hind. moli*] In India, a gardener or one of the caste of gardeners. Also *mallee*.

Our garden is nearly washed away and our molly or gardener, does not present us with our morning bouquet. *W. H. Russell, Diary in India*, II, 121

mollycoddle (mol'i-kod-l), *n.* [*Also mollycoddle* *L. Molly*, *Moll*, + *coddle*] 1 One who lacks resolution, energy, or hardihood, an effeminate man used in derision or contempt

He [Fiddling] couldn't do otherwise than laugh at the puny cockney bookseller, pointing out endless volumes of sentimental twaddle, and hold him up to scorn as a mollycoddle and a milkop.

Thackeray, *English Humorists*, Hogarth, Smollett, and Fiddling

Molly Maguire (mol'i ma-gwir'), [*A name assumed (from Molly, a familiar form of the feminine name Mary, and Maguire, a common Irish surname) by the members of the organization (def 1), in allusion to the woman's dress they wore as a disguise. There is no evidence that the name referred orig. to a particular person named Molly Maguire*] 1 A member of a lawless secret association in Ireland, organized with the object of defeating and terrorizing agents and process-servers, and others engaged in the business of evicting tenants

These *Molly Maguires* were generally stout active young men, dressed up in women's clothes, with faces blacked or otherwise disguised. In this state they used audaciously to surprise the unfortunate grippers, keepers, or process servers, and either duck them in bog holes or beat them in the most unmerciful manner so that the *Molly Maguires* became the terror of all our officials. *W. S. Trevel, Realities of Irish Life* vi

Hence — 2 A member of a secret organization in the mining regions of Pennsylvania, notorious for the commission of various crimes, including murderous attacks upon the owners, officers, or agents of mines, until their suppression by the execution of several of their leaders, about 1877

mollymawk (mol'i-mak), *n.* A variant of *malle-muck*

molly-puff (mol'i-puf), *n.* A gambling decoy

Thou molly puff! wilt it not justice to kick thy guts out! *Shirley The Wedding*, iv, 3

Moloch (mō'lok), *n.* [*Also sometimes Moloch*, *L. L. Moloch*, *G. Moloch*, *Heb. mōlakh* (usually with the article) (also *Milkōm*, *Malkām*, *Gr. Μελχὼν*, *E. Melcom*), cf *mōlakh* (= *Ar. melik*, king, *L. mōlakh*, reign, part *mōlakh*, reigning)] 1 The chief god of the Phœnicians, frequently mentioned in Scripture as the god of the Ammonites, whose worship consisted chiefly of human sacrifices, ordeals by fire, mutilation, etc. also identified with the god of the Carthaginians called by classical writers *Amon* or *Saturn*. Hence the word has now become a designation of any baneful influence to which every thing is sacrificed. And they built the high places of Baal, to cause their sons and their daughters to pass through the fire unto Moloch, which I commanded them not. *Jer xxxii 35*

First *Moloch*, horrid king, beam'd with blood
Of human sacrifice, and parents' tears
Milton, P. I, 1, 392

It was a very *Moloch* of a baby on whose insatiable altar the whole existence of this particular young brother was offered up a daily sacrifice. *Dickens, The Hated Man*, II

2 [NL] The typical genus of *Molochinae*. There is but one species, *M. horridus* of Australia, one of the most repulsive, though in reality one of the most harmless, of reptiles, the horns on the head and the numerous spines on the body giving it a formidable aspect

3 [*I. c*] A lizard of this genus as, the spiny mōlakh

Molochinae (mol-ō-ki'nē), *n. pl.* [NL, *L. Moloch* + *-inae*] A subfamily of agamoid lizards having a depressed body, a very small mouth, and the upper teeth directed horizontally inward. The body is beset with large spines, especially on the head giving an ugly and formidable appearance to an entirely harmless creature

molochine (mol'ō-kin), *a.* and *n.* *I. a* Of or pertaining to the *Molochinae*

II. n. A moloch

Molochize (mō'lok-iz), *t. t.*, pret and pp. *Molochized*, ppt *Molochizing* [*L. Moloch* + *-ize*] To sacrifice or immolate as to Moloch. [Rare]

I think that they would *Molochize* them [their babies] too, to have the heavens clear. *Tennyson, Harold*, I, 1

moloid (mol'oid), *a.* and *n.* *I. a* Of or pertaining to the *Moloidae*

II. n. A member of the family *Molida*

Moloidae (mō-loi'de-a), *n. pl.* [NL, *L. Mola* + *-oidea*] In Gill's ichthyological system, a superfamily of gymnodont plectognath fishes, founded upon the single family *Molida*. The moloids are without pelvic or ribs they have the body truncated behind the caudal region aborted, and the jaws without median sutures. See *Molida*

Molokan (mol-ō-kan'), *n.* *pl. Molokans* (-ē) [*Russ. molokan*, *L. moloko*, milk see *milk*] A member of a Russian sect living chiefly in southeastern Russia. They condemn image worship, fasting, and episcopacy and accept the Bible as the only rule of faith and conduct. They hold their religious services in private houses and have a simple church organization. Their name is derived from the reputed practice of drinking milk on fast days — a departure from the custom of the Orthodox Church. Also written *Molokan*

The *Molokans* are Russian sectarians closely resembling Scotch Presbyterians. *D. W. Wallace, Russia* p. 157

molompi (mō-lom'pi), *n.* [Native name] The African rosewood. See *roswood*

molopes (mō-lō'pēz), *n. pl.* [NL, *L. G. molops* (μολωψ), the mark of a stripe, a weal] In *pathol*, same as *ribes*

molosse (mō-lōs'), *n.* [*F. molosse* = *Sp. moloso*, *L. molossus*, a foot so called see *molossus*] Same as *molossus*, 1

molossi, *n.* Plural of *molossus*, 1

Molossian (mō-lōs'i-an), *a.* and *n.* [*L. Molossia*, *G. Mozaia*, the country of the Molossi, *L. Mozaia*, Molossian, *pl. Molossians*, *L. Molossi*, the Molossians] *I. a.* Relating or belonging to the Molossians, or Molossi, a tribe of ancient Epirus, in northern Greece

II. n. 1 One of the Molossian tribe — 2

[*I. c*] One of the *Molossidae*

molossic (mō-lōs'ik), *a.* [*L. Molossus* + *-ic*] In *pros*, being or pertaining to a molossus

Molossidae (mō-lōs'i-de), *n. pl.* [NL, *L. Molossus* + *-idae*] The *Molossinae* regarded as a family composed of the genera *Molossus*, *Nyctinomus*, and *Chromelys*, the bulldog bats, or mastiff bats

Molossinae (mō-lōs'i-nē), *n. pl.* [NL, *L. Molossus* + *-inae*] A subfamily of bats of the family *Emballonuridae*, the molossoid or bulldog bats so called from the physiognomy, a peculiar expression being conferred by the thick pendulous chops, like a bulldog's. They have large feet, with the first toe, or first and also the fifth, much larger than the rest, the feet free from the wing membrane, which fold under the forearm, a tractile intermembrane sheathing and sliding along the tail and a single pair of large upper incisors. In all the genera, excepting *Myotis*, the long tail is produced far beyond the intermembrane. Leading genera are *Molossus*, *Chromelys*, and *Myotis*

molossine (mō-lōs'in), *a.* and *n.* [*L. Molossus* + *-inae*] *I. a.* Pertaining to the *Molossinae*, or having their characters, molossoid

II. n. A bulldog bat, a molossoid

molossoid (mō-lōs'oid), *a.* and *n.* [*L. Molossus* + *-oid*] *I. a.* Molossine, in a wide sense, pertaining to or resembling the *Molossinae*

II. n. A member of the *Molossinae*, a molossoid bat

Molossus (mō-lōs'us), *n.* [In def 1, *L. molossus*, a metrical foot (< *Gr. molossos*, a metrical foot of three long syllables, *L. Molossus*, a Molossian hound, < *Gr. Molossus*, Molossian see *Molossian*)] 1 [*I. c*, *pl. molossi* (-i)] In *classical pros*, a foot of three long syllables — 2 In *mammal*, the typical and leading genus of *Molossinae*. There are numerous species, inhabiting tropical and subtropical America as *M. glaucus*, *M. obscurus*, etc. These bulldog bats have the tail long and exerted, thick pendulous lips prominent nostrils, large rounded ears, the incisors one above and one or two below on each side, and the premolars two below and one or two above on each side

3 In *conch*, a genus of mollusks. *Montfort*, 1408

Molothrus (mol'ō-thrus), *n.* [NL (Swainson, 1831), said by the name to come from *G. μολοθριος* qui non vocatur alius aedes intrat] an unblinded guest appear an error for *Molothrus* (as given by J. (Abanias), < *G. μολοθριος*, a greedy fellow] A genus of American oscine passerine birds of the family *Icteridae* and subfamily *Aquila*, parasite in habit, the cow-

birds, cowpen-birds, or cow-buntings. There are several species, of North and South America, all of which lay their eggs in other birds' nests, so far as is known like the Old World cuckoo. *M. ater* or *pecorus* abounds in most parts of the United States. *M. aeneus*, a large hand some species, inhabiting Texas and Mexico, is the bronzed or red eyed cow bird. The genus is also called *Hypobletia*. See cut under *cow bird*.

molrooken (mol'ruk-en), *n.* [Origin obscure.]

The great crested grebe, *Podiceps cristatus* (Swainson) [Lough Neagh, Ireland.]

molsh, *a.* See *mulsh*.

molt¹, *n.* An obsolete preterit of *molt*¹ (*haueor molt*¹, *moult*¹ (molt), *r.* [With unorig. *l*, < ME *mouten*, *mouten* = D *muten* = MLG LG *muten* = OHG *mūzen*, MHG *mūzen*, change, G *mausen*, change the feathers or skin, molt, < L *mutari*, change see *mutate*² and *new*³, doublets of *molt*²]. *I. trans.* To shed or cast, as feathers, hair, or skin, slough off: often used figuratively.

So shall my anticipation prevent your discovery, and your secrecy to the king and queen *moult* no feather. *Shak*, Hamlet, II 2. 306

Mute the skylark and forlorn,
When she *moult* the firstling plumes. *Coleridge*

We all *moult* our names in the natural course of life. *Southey*, The Doctor, lxxx (Davies)

II. intrans. 1 To cast or shed feathers, hair, skin, or the like, undergo or accomplish a molt, exuviate, mew. See the noun.

Long as the bird may live, and often as it may *moult*, the original style of markings never gives way to any other. *A. Newton*, Encyc. Brit., IX 1

2 To be about to be cast off or shed, as plumage.

Our hero gave him such a sudden fist in the mouth as dashed in two of his teeth that then happened to be *moulting*. *Brooke*, Pool of Quailty, l. 104 (Davies)

molt², *moult*¹ (molt), *n.* [*< molt*², *moult*¹, *r.* 1] The act or process of shedding or casting any tegumentary, cuticular, or exoskeletal structures or appendages, as feathers, hair, skin, nails, horns, hoofs, claws, or shell, ecdysis, exuviation. The surface of the body of most animals, outside of the parts which are vascular or supplied with blood, is worn away by friction, attrition, or other mechanical means. This process may be slight and gradual or continuous, as in the case of man, where it results in scarf skin and dandruff, or it may be periodical and very extensive, affecting the whole cuticle or its appendages. Mammals shed their hair usually once a year. Birds molt their feathers usually at least once, often twice, sometimes thrice a year, the last two cases constituting the *double* and the *triple* molt. Both these classes of animals in some cases, molt cuticular substances in *mus*. Thus the American antelope sheds the sheath of the horn. Lemmings and ptarmigan drop their claws, some birds of the auk family shed the horny parts of the beak, snakes cast their cuticle whole, even to the layer over the eyeball, crustaceans slough the whole shell, and numberless other invertebrates have a proper molt of similar or analogous character.

2 The period or time of molting.

moltable (mol'ta-bl), *a.* [Irreg. for *moltable*.] That can be melted; fusible.

molten. An obsolete past participle of *melt*¹ (*haueor*).

molten¹ (mol'tn), *p. a.* [Pp. of *melt*¹]. 1. Melted, in a state of fusion or solution, as, *molten* gold.

Love's mystick form the artisans of Greece
In wounded stone or *molten* gold express. *Prior*

Solid from floats upon *molten* from exactly as ice floats upon water. *Tyndall*, Forms of Water, p. 124

A prince whose manhood was all gone,
And *molten* down in mere uxoriousness. *Tennyson*, Geraint

2 Made or produced by means of melting.

And he received them at their hand, and fashioned it with a graving tool, after he had made it a *molten* calf. *Ex* xxvii 4

3† Liquid.

Three night in *molten* donnye. *Sum hem kope*

Palladius Husbandrie (E. E. T. S.), p. 54

molten², *moultent*¹ (mol'tn), *p. a.* [Irreg. for *molten*, pp. of *molt*², *v.*] Having molted, being in the state of molting.

A clip wing d (Griffin) and a *moultent* Raven. *Shak*, 1 Hen. IV (fol. 1623), III 1. 162

moltenly (mol'tn-li), *adv.* Like what is in a molten state, liquidly.

A living language *moltenly* ductile to new shapes of sharp and clear relief in the moulds of new thought. *Lowell*, Among my Books, 1st ser., p. 155

molting, *moulting* (mol'ting), *n.* [With unorig. *l*, as in *molt*², *moult*¹, < ME. *mouting*, *mouting*, verbal *n.* of *molt*², *moult*¹, *v.* 1] The act or process of molting, molt.

O hath my leaden soul the art to improve
Her wasted talent and untried, aspires
In this sad *moulting* time of her death? *Quarles* Emblems, v. 4.

2†. The molting season.

Also in sothe the season was paste
for hertis y heedid so hy and so noble
To make any myrthe for *moultynge* that nyghed.
Richard the Reddell, II. 12.

molto (mol'tō), *adv.* [It, very much, < L *multus*, much see *multitude*] In music, very, much: as, *allegro molto*, very fast.

Molucca balm. See *Moluccella*.

Molucca bean, deer, etc. See *bean*, etc.

Moluccella (mol-uk-sel'a), *n.* [NL (Linnæus, 1737), named from the Molucca Islands, of which the plant was supposed to be a native.] A genus of labiate plants of the tribe *Stachydeæ* and the subtribe *Lamieæ*. It is characterized by the posterior lip of the corolla being usually concave and covered with long soft hairs, by the calyx being larger at the apex, with an oblique limb having from five to thirteen unequal spiny teeth, and by having the anther cells extremely divergent. They are very smooth annual herbs, with petiolate leaves and axillary whorls of small flowers. There are but 2 species, both native in the eastern Mediterranean region. *M. laevis*, an old garden flower from Asia, once supposed to come from the Moluccas, is called *Molucca balm*, and also *shell flower*, from its large cup-shaped calyx, which has the small corolla at the bottom.

Molva (mol'vā), *n.* [NL (Nilsson, 1832), a name of this fish.] A genus of gadoid fishes, related to the burbot and cusk, having the mouth terminal, anal fin entire, and canine teeth on the vomer and mandible. *M. molva* or *vulgaris* is the common ling of North Atlantic waters. See cut under *ling*.

molwart, *n.* See *molward*.

moly¹ (mō'h), *a.* [Also *mole*, < *moly*² + *-y*¹.] Like a mole or its habits. [Rare.]

He did infinite service in discouraging the *moly*, crapping style, which at that time infected all the ranks both of the laity and clergy.

Goldsmith, Encouragers and Discouragers of English Literature, II

moly² (mō'h), *n.* [*< L moly*, < Gr *μᾶλιν*, a fabulous herb] 1 A fabulous herb of magic power, represented as having a black root and the flower milk-white, said by Homer to have been given by Hermes to Odysseus (Ulysses) to counteract the spells of Circe.

And yet more meddinal is it than that *moly*
That Hermes once to wise Ulysses gave. *Milton*, Comus, l. 646

But as ye hearb *moly* hath a flower as white as snow, and a roote as black as luche, so age hath a white head, showing pitee, but a black hart, swelling with mischiefe. *Lophy*, Euphues and his England (Arber's Reprints, IV 231)

Homer is of opinion that the principal and sovereign herb of all others is *moly*, so called (as he thinketh) by the Gods themselves. *Holland*, tr. of Pliny, xxv 4

2 Wild garlic, *Allium Moly*. The moly of Dioscorides is said to have been *Allium subhirsutum*, the dwarf moly is *Chamaemoly*.

molybdate (mō-lib'dāt), *n.* [*< molybd(u)* + *-ate*¹] A compound of molybdate acid with a base. — **Molybdate of lead**, yellow lead ore, the mineral wulfenite. See *wulfenite*.

molybdena (mol-ib-dē'nā), *n.* [= F *molybdēn* = Sp *molibdena* = Pg *molybdeno*, *molybdēna*, < L *molybdana*, < Gr *μολύβδανα*, galena or litharge, < *μολύβδος*, lead, = L *plumbum*, lead see *plumb*.] Same as *molybdenum*.

molybdeniferous (mol'ib-dē-nif'e-rus), *a.* [*< L molybdana* (see *molybdena*) + *ferre* = E *fer* 1] Containing molybdenum.

molybdenite (mol-ib-dē'nīt), *n.* [*< molybdēna* + *-ite*²] Sulphid of molybdenum, occurring in isolated masses or in scales, less often in hexagonal crystals, of a lead-gray color and metallic luster. It is very soft, and, like graphite, which it closely resembles, leaves a trace on paper.

molybdenous (mol-ib-dē'nus), *a.* [*< molybdēnum* + *-ous*] Pertaining to or obtained from molybdenum.

molybdenum (mol-ib-dē'nūm), *n.* [*< NL molybdanum*, a later form for L *molybdana* see *molybdēna*] Chemical symbol, Mo, atomic weight, 96. A metal of a silver-white color but harder than silver, which fuses with difficulty, if at all, at the highest temperature of a wind-furnace. Its specific gravity is 8.6. It is chemically related to chromium, tungsten, and uranium, and, like those metals, forms trioxides which are acid forming and yield very characteristic salts. It is remarkable for the number of oxides and corresponding chlorides which it forms, but it is the least important economically of the group to which it belongs. The most abundant ore of molybdenum is the sulphuret (molybdenite), and the strong external resemblance of this mineral to graphite (Latin *plumbago*) led to the confusion of molybdēna with that substance, moreover, external resemblance and certain chemical peculiarities caused still further difficulties of nomenclature, in which manganese, antimony, and even magnesia were involved. Thus, the peroxid of manganese was called by Linnaeus *molybdenum magneum*. These perplexities were not cleared up until toward the end of the last century, but finally, as the result of the labors of Scheele, Bergman, and Hjelm (1778-90), the metal

molybdēna, or molybdenum, as it is now more generally called, was isolated from its combinations. The ores of molybdenum are somewhat widely diffused, but rarely occur in any considerable quantity. The principal molybdeniferous minerals are molybdenite and wulfenite. There is also a molybdic ocher (the trioxide) and a carbonate (paterasite), various ores of iron also contain traces of this metal.

molybdic (mō-lib'dik), *a.* [= F *molybdique*, as *molybd(ēnum)* + *-ic*] Pertaining to or obtained from molybdenum. — **Molybdic acid**, H₂MoO₄, an acid of molybdenum, which may be obtained in yellow crystalline crusts. Its salts are called *molybdates*. — **Molybdic ocher**, native molybdic oxide.

molybdin (mō-lib'din), *n.* [*< molybd(ēnum)* + *-in*²] Molybdic ocher.

molybdite (mō-lib'dīt), *n.* [*< molybd(ēnum)* + *-ite*²] Molybdic ocher.

molybdocolic (mō-lib-dō-kol'ik), *n.* [*< Gr. μολύβδος*, lead, + *κολική*, colic see *colic*] Lead-colic.

molybdomenite (mō-lib-dō-mē'nīt), *n.* [*< Gr. μολύβδος*, lead, + *μήνη*, moon, + *-ite*² (cf. *sele-nite*)] A rare lead selenite, occurring in thin transparent scales of a white or greenish color, found with other selenium minerals at Cachemira in the Argentine Republic.

molybdoparesis (mō-lib-dō-par'e-sis), *n.* [NL, < Gr *μολύβδος*, lead, + *παρεσις*, palsy] Lead-palsy.

molybdosis (mol-ib-dō'sis), *n.* [NL, < Gr *μολύβδος*, lead] Lead-poisoning.

molyne (mō-li-nē'), *a.* [See *moline*.] In her, same as *moline* when applied to a cross.

molsite (mōl'sīt), *n.* [Said to be < Gr *μολύβδος*, var. of *μολύβδος*, a staining, defilement, < *μολύνω*, stain, also half-cook, + *-ite*²] A chlorid of iron occurring as a thin yellow or red incrustation on lava at Vesuvius.

mom¹, *a*, *n*, and *v.* See *num*¹.

momblement, *n.* See *mumblement*.

momblishness (mom'blish-ness), *n.* Muttering talk. *Bailey*, 1731.

momé¹ (mōm), *n.* [*< OF momé*, a mask see *num*²] A buffoon, a fool, a blockhead, a ninny, a dull person, a stupid fellow.

I dare be bold awhile to play the *momé*,
Out of my sacke some other faults to loose. *Mrs. Jon. Mays*, 468 (Nares)

Mome, malt-horse, capon, coxcomb, idiot, patch. *Shak*, C of E, III 1. 32

Words are but wind, but blows come home,
A stout tongue d lawyer's but a *mome*.

Brome's Songs (1661), p. 105 (Halliwell)

Parnassus is not clome

monachism (mon'a-kizm), *n*. [= *F* *monachisme* = *Sp* *monaquismo* = *Pg* *It* *monachismo*, < *ML* *monachismus*, < *LGr* *μοναχισμός*, monk-ery, < *μοναχός*, a monk, see *monk*] 1 The principle of living in the manner of monks, the system or course of life pursued by monks and nuns, primarily, the practice of living alone in religious retirement from the world, religious seclusion, secondarily, the corporate life of religious communities under vows of poverty, celibacy, and obedience to a superior. See *monk*.

The root idea of *monachism* is retirement from society in search of some ideal of life which society cannot supply, but which is thought attainable by abnegation of self and withdrawal from the world. This definition applies to all forms of *monachism*, whether amongst Brahmins, Buddhists, Jews, Christians, Moslems, or the communist societies of the present day, even when the-oretically anti-theological. This broad general conception of *monachism* is differentiated in the following ways. It may take the form of absolute separation, so far as practicable, from all human intercourse, so as to give the whole life to solitary contemplation — the anchoritic type, or it may seek fellowship with kindred spirits in a new association for the same common end — the cenobitic type. It may abandon society as incurably corrupt, as a City of Destruction out of which the fugitive must flee absolutely — the Oriental view, for the most part, or it may consid-er itself as having a mission to influence and regenerate society — which has been, on the whole and with minor exceptions, the Western theory of the monastic life.

The word was introduced into philosophy by Giordano Bruno to denote the minimum parts of substances supposed by him to be at once psychical and material. In the philosophy of Leibnitz the concep-tion of the monad is that of an absolutely unextended sub-stance existing in space, its existence consisting in its activities, which are ideas, and the universe was conceived by him as made up of such existences. The history of each

monad follows an internal law, and all interaction between the monads is excluded, but there is a preestablished har-mony between these laws for the different monads. (See *Leibnitzian*.) The Leibnitzian theory of the monad was, in many particulars, revived by Hermann Lotze.
 Pythagoras his *monads*, so much talked of, were nothing else but corporeal atoms.
Cudworth, *Intellectual System*, p. 13

The soul is a *monad* (according to Bruno). It is never entirely without a body. God is the *monad*, he is the minimum, because all things are external to him and at the same time the maximum, since all things are in him. The atoms of the ancients differed from one another in magnitude, figure, and position, but not quali-tatively or in internal character. The *monads* of Leibnitz, on the contrary, are qualitatively differentiated by their ideas. All *monads* have ideas, but the ideas of the different *monads* are of different degrees of clearness. God is the primitive *monad*, all other *monads* are its fulgurations.
Ueberweg, *Hist. Philos.* (tr. by Morris), II, 27

2. In biol. (a) Any simple single-celled organ-ism. The name covers a great many similar but not ne-cessarily related unicellular organisms, some of which are monads in sense (b), others being plants, others again are free flagellate cells representing an embryonic con-dition of some other organism or of wholly indeterminate character.
 We are warranted in considering the body as a common wealth of *monads*, each of which has independent powers of life, growth, and reproduction.
H. Spencer, *Social Statics*, p. 493

(b) In zool., specifically, a flagellate infusorian, one of the *Infusoria flagellata*, characterized by the possession of one or two long whip-like flagella, and generally exhibiting an endoplast and a contractile vacuole. The word in this sense is derived from the name of the genus *Monas* — 3. In chem., an element whose atoms have the lowest valence or atomicity, which valence is therefore taken as unity.

They are slimy plants growing in moist places, frequently parasitic, and produce zoospores, sporogones, plasmodia, zoospores, and indurating spores, the zoospores emitting at maturity one to many zoospores or amoeba-like bodies.

monadism (mon'a-dīz-m), *n.* [= F *monadisme* = Sp *monadismo*, as *monad* + *-ism*.] 1. A philosophical system which accepts, in some form, the theory of monads, also, a theory of monads.

Not unfrequently he [Leibnitz] introduces his theory of monadism by the argument that there must be simple substances since there are composite things, for the composite is only an aggregate of simple units.
E. Caird, *Philos. of Kant*, p. 86.

2 The application of the conception of the monad to the solution of the problems of chemistry and physics, atomism.

Of the different forms of the atomic theory, that of Roscovich may be taken as an example of the purest monadism.
Encyc. Brit., III, 37.

monadology (mon-a-dol'ō-jī), *n.* [= F *monadologie*, *<* Gr *μῶνις* (*monad*-), a unit (see *monad*), + *-λογία*, *<* *λέγειν*, speak see *-ology*.] In the philosophy of Leibnitz, the doctrine of monads, also, any similar metaphysical theory, as that of Lotze. See *monad*, 1.

Leibnitz's monadology may be a true system, but also it may not, and our faculties do not enable us to say whether it is or is not.
Leib. Stephen, *Eng. Thought*, I, § 45.

Lotze, however, saves himself from a materialistic dualism through his monadology.
Mind, XII, 589.

monal (mō-nāl'), *n.* Same as *monaul*.

monamine (mō-nā'mīn), *n.* [*<* Gr *μῶνις*, single, + *E amine*.] One of a class of chemical compounds formed by substituting one or more alcohol radicals for the hydrogen in a single ammonia molecule. Monamines are primary, secondary, or tertiary, according as one, two, or three atoms of hydrogen are replaced.

See *monarchy*.

It [mercy] becomes
 The throned monarch better than his crown
Shak., *M. of V.*, IV, 1, 189.

The Sovereign if a single person, is or should be called a Monarch. *Maine*, *Early Hist. of Institutions*, p. 350.

2 Any possessor of absolute power or superiority, one who or that which holds a dominating or preeminent position, literally or figuratively as, the oak is the monarch of the forest.

Come, thou monarch of the vine,
 Plump Bacchus with pink eye!
Shak., *A. and C.*, II, 7 (song).

I am monarch of all I survey
 My right there is none to dispute
Cowper, *Alexander Selkirk*.

= Syn. 1 King, etc. (see *prince*), potentate, autocrat, despot.

Monarcha (mō-nar'kā), *n.* [NL, *<* LL *monarcha*, a monarch see *monarch*.] An extensive genus of true flycatchers, of the family *Muscicapidae*, founded by Vigors and Horsfield in 1826. It contains about 25 species, especially characteristic of Australia, New Guinea, the Moluccas, and Polynesia. They are birds of brilliant and variegated coloration.

monarchal (mō-nar'kal), *a.* [= It. *monarchale*, as *monarch* + *-al*.] Of or pertaining to a monarch; befitting a monarch, sovereign.

The prince persons being in all monarchal governments the very knot of the people's welfare.
Sir P. Sidney, *Arcadia*, v.

Satan, whom now transcendent glory raised
 Above his fellows, with monarchal pride,
 Conscious of highest worth, unmoved this spake.
Milton, *P. L.*, II, 428.

monarchess (mon'ār-kos), *n.* [*<* *monarch* + *-ess*.] A female monarch, a queen or empress.

The monarchess of the four corner'd earth
Middleton, *Solomon Paraphrased*, viii.

Rome, what made her such a Monarchess, but only the adventures of her youth, not in riots at home, but in dan- ges abroad?
Capt. John Smith, *Works*, II, 197.

monarchia (mō-nar'kī-ā), *n.* [LL, see *monarchy*.] In *theol.*, same as *monarchy*, 5.

monarchial (mō-nar'kī-āl), *a.* [*<* LL *monarchia*, monarchy (see *monarchy*), + *-al*.] Same as *monarchical*.

If all the evils which can arise among us from the republican form of our government, from this day to the day of judgment, could be put into a scale against what this country suffers from its monarchial form in a week, the latter would be preponderant.
Jefferson, *Correspondence*, II, 205.

Monarchian (mō-nar'kī-an), *n.* [= F *monarchien* = Pg *monarchiano*, *<* Gr *μοναρχία*, monarchy, see *monarchy* and *-an*.] One of a body of Antitrinitarian Christians in the latter part of the second and the third century. They were divided into two groups—the *dynamic* (*dynamistic*) or *rationalistic* Monarchians, who regarded Christ as filled with a divine power and denied his divinity, and the *Patristic* Monarchians, who regarded the Father and the Son as the same, the latter were called *modalistic* Monarchians, from their advocacy of a threefold mode or manifestation of the deity.

By monarchians of the former [dynamistic] class Christ was held to be a mere man, miraculously conceived indeed, but constituted the Son of God simply by the infinitely

high degree in which he had been filled with Divine wisdom and power.
Encyc. Brit., XVI, 719.

Monarchianism (mō-nar'kī-an-izm), *n.* [*<* *Monarchian* + *-ism*.] The theological doctrine respecting the Godhead maintained by the Monarchians.

Modalistic monarchianism, conceiving that the whole fulness of the Godhead dwelt in Christ, took exception to the 'subordinationism' of some church writers, and maintained that the names Father and Son were only two different designations of the same subject, the one God who 'with reference to the relations in which He had previously stood to the world is called the Father, but in reference to His appearance in humanity is called the Son.'
Encyc. Brit., XVI, 719.

monarchianistic (mō-nar'kī-an-ist'ik), *a.* [*<* *Monarchian* + *-istic*.] Relating to or resembling the theory of the Monarchians.

Monarchianistic comparisons of Augustine.
Cleaves, *Hist. Philos.* (trans.), I.

monarchic (mō-nar'kik), *a.* [*<* F *monarchique* = Sp *monarquico* = Pg *monarchico* = It *monarchico*, *<* Gr *μοναρχικός*, of a monarch or monarchial, *<* *μοναρχία*, a monarchy, see *monarch*, *monarchy*.] Relating or pertaining to a monarch or to monarchy, monarchial.

The monarchic and aristocratic and popular partisans have been jointly laying their axes to the root of all government.
Burke, *Vind. of Nat. Society*.

Without justice all forms democratic or monarchic are tyrannical alike.
Frucht, *Usser*, p. 190.

monarchical (mō-nar'kī-kal), *a.* [*<* *monarchic* + *-al*.] 1 Pertaining to a monarch or to monarchy, characteristic of or subject to a monarch, of the nature of monarchy as monarchic rule or methods, a monarchial country or government.

Monarchial the State,
 But prudently confined and mingled wise
 Of each harmonious power.
Thomson, *Liberty*, iv.

In a monarchial state in which the constitution is strong and the laws may be relaxed without danger.
Goldsmith, *Citizen of the World*, 1.

It is not impossible that the political movements of our time, which seem on the surface to have a tendency to democracy, may have in reality a monarchial bias.
Dracut.

2 Of or pertaining to government by a monarch.

It was not the Monarchial way of Government that was so displeasing to God or Samuel for their Government was of that form already.
Stedman, *Scammon*, II, iv.

3 Regarding monarchy as the best form of government, adhering to the principles of monarchy. The name *Monarchial party* was often applied to the Federalists of the United States by their opponents. Also *monarchal*.

= Syn. See *prince* and *royal*.
monarchically (mō-nar'kī-kal-ī), *adv.* In the form of a monarchy, or in accordance with the principles or methods of monarchial government.

monarchy (mon'ār-ki), *n.*, pl. *monarchies* (-kiz). [*< ME monarchie = F. monarchie = Sp monarquía = Pg It monarchia, < LL monarchia, < (Gr μοναρχία, absolute rule, sole power, monarchy, < μοναρχος, a sovereign, monarch see monarch)*] 1. Supreme power wielded by a single person, absolute personal authority

They imagined that he [Jesus] should subdue the rest of the world and make Jerusalem the seat of an universal monarchy. *Hooker, Eccles. Polity, vii 10*

But let us not deceive our selves the pretensions are as high and as great at Rome to this monarchy as ever they were. *Stillingfleet, Hermons, II 11*

2 The principle of government by a monarch, the monarchical system

The first, the most ancient, most general, and most approved, was the government of one ruling by just laws, called monarchy. *Malough, Hist World, I ix 2*

I hear there are people among you who think the ex-pertise of our governments has already proved that to publican governments will not answer. Send those gen-try here, to count the blessings of monarchy. *Jefferson, Correspondence, II 221*

3 A government in which the supreme power is either actually or nominally lodged in the hands of a monarch or sole ruler, who holds his position for life, generally with hereditary suc-cession. There have been *elective monarchies*, in which the successor to a deceased sovereign was chosen without obli-gatory regard to the hereditary principle but this prin-ciple has finally prevailed, to the exclusion of choice, in all existing civilized monarchies. The former kingdom of Poland was a purely elective monarchy. The German Roman empire was originally, and always nominally, elec-tive but for many centuries the chosen successor was almost invariably the heir of the former emperor. An *absolute or despotic monarchy* is one in which the will of the monarch or sovereign is supreme over all other authority or powers of government. A *limited or constitutional mon-archy*, one in which the sovereign is limited to the exercise of particular powers or functions by the laws or constitu-tion of the realm. More or less limited monarchies have nearly always existed. About the fifteenth century a note-worthy increase of the power of the sovereign took place (as in England under Edward IV, in France under Louis XI, in Spain under Ferdinand the Catholic and Charles V). Till the close of the eighteenth century the prevalent theory and practice on the continent constituted nearly un-restricted absolutism. This has now almost disappeared from Europe, while still maintaining a foothold in Asia. But whether absolute or limited the monarch is theoret-ically regarded as the source of all power and all acts of government are done in his name.

The obvious definition of a *monarchy* seems to be that of a state in which a single person, by whatever name he may be distinguished, is intrusted with the execution of the laws, the management of the revenue, and the com-mand of the army. But, unless public liberty is protect-ed by intrepid and vigilant guardians, the authority of so formidable a magistrate will soon degenerate into des-potism. *Gibbon*

It has often indeed been noticed that a feudal *Monar-chy* was an exact counterpart of a feudal Manor, but the reason of the correspondence is only now beginning to dawn upon us. *Maine, Early Hist of Institutions, p 77*

4 The territory ruled over by a monarch, a kingdom, an empire

What source for perjury
Can this dark monarchy afford false Clarence?
Shak, Rich III, I 4 51

5 In *theol.*, the doctrine that there is in the Godhead only one principle (*αρχή*), cause (*αίτι-α*), source or fount (*πηγή*) of deity, namely God the Father, from whom the Son and the Holy Ghost derive their divinity. Also *monar-chism*. — **Fifth Monarchy Men**. See *fifth*

Monarda (mō-nar'dā), *n.* [*< NL (Linnaeus, 1737), named after N. Monardès, a Spanish physician and botanist of the 16th century*] A genus of labiate plants type of the tribe *Monardea*, characterized by the anthers hav-

ing a very small connective, the cells confluent into one, and by having a tubular calyx with fifteen nerves, which is almost equally five-toothed. They are odoriferous erect herbs with entire or toothed leaves, and quite large flowers arranged in a few terminal or whorled heads, surrounded by many bracts, and varying in color, being bright-red, purple, white, and in one species pale yellow. About 7 species are known, all natives of North America. *M. punctata*, the American horsemint, is stimulant and carminative. *M. didyma*, the Oswego tea or bet balm has bright scarlet flowers. *M. didyma* is the wild bergamot.

Monardes (mō-nar'dō-ē), *n.*, pl. [*< NL (Ben-tham, 1833), < Monarda + -es*] A tribe of plants of the natural order *Labatae*, charac-terized by having two perfect ascending sta-mens, in which one cell of each anther is either wanting or separated from the other. It embraces 11 genera. *Monarda* being the type, and about 400 species, the majority of which are widely scattered throughout the temperate and warmer regions of the earth.

monardin (mō-nār'din), *n.* [*< Monarda + -in*] A crystalline solid which separates from the oil of horsemint, *Monarda punctata*. It is isomeric with thymol.

monarsenous (mon-ār'se-nus), *a.* [*< Gr μόνος, single, + ἀρσεν, male*] In *zool.*, having but one male for several females.

monas (mon'as), *n.* [*< LL monas, a unit see monad*] 1 A monad, a monadiform in-fusorian. — 2 [*cap*] The typical genus of *Monadina*. *Monas* is an example. — **Monas prodigi-osa**, *Bacillus prodigi-osa*. This microscopic organism forms short rods. It is not pathogenic, but is found on starchy substances, such as bread, rice, and potatoes, also on milk. It produces a red pigment, and it or the sub-stance which it discolors are sometimes called *blood rain*, *bleeding bread*, *bleeding host*, and *red milk*.

Monasa (mon'ā-sā), *n.* [*< NL (Vieillot, 1816), an error for Monacha see Monacha*] A genus of South American barbets or puff-birds, of the family *Bucconidae*, the nun-birds or mon-archs. There are seven species, of comparatively large size, with somber blackish plumage usually relieved with white on the face or wings and coral red bills. As *M. nagra*, *M. morphna*, and *M. nagrafrons*. Also *Monasta Monastes*, *Monacha Luperonx*, and *Scotochama*. See cut at *nun bird*.

Monascidae (mon-a-sid'ā-ē), *n.*, pl. [*< Gr μόνος, alone, + NL Ascidia*] A superfamily group of tunicates, the *Ascidia simplicis*, the sea-squirts, simple and either solitary or social ascidians.

monascidian (mon-a-sid'ā-ē), *a.* and *n.* [*< Gr μόνος, single, + E ascidian*] 1. A simple, as an ascidian, not composite or compound, as many ascidians are, of or pertaining to the *Monascidae*.

The term, however, strictly includes the abbey, the priory, the nunnery, and the friary and in this broad use is syn-onymous with *convent*. Monasteries in the Christian church were probably first established in the fourth century. St. Basil's diet of Nursia in the sixth century established a monastic rule which has been the foundation of nearly all the rules which govern monastic vows. Vows under different rules were made from the beginning of Christianity. The

number of monasteries in Europe was much diminished at the Reformation, when their rich estates were in part ap-propriated by sovereigns for their own use, and in part trans-ferred to universities and other educational institutions, etc. We owe to the monasteries the first definite begin-nings or revival of civilization in many countries, especial-ly Germany and France, almost all the missionary work of the early middle ages, and the preservation of nearly all ancient classical and early medieval literature. The mo-nastic life has been practised from pre-Christian times among the Buddhists. See *rule*.

3 An epithet noting a style of book-decoration in which medieval forms of compact or ornament are strongly stamped on the sides or back of the book without any use of gold-leaf. — **Mo-nastic bishop**, in the ancient Celtic churches of Ireland and Scotland, and sometimes in other countries in the earlier middle ages. (a) an abbot who was also a bishop, or (b) a monk consecrated bishop, resident in a monastery, and exercising his office in confirmations, ordinations, etc., but without jurisdiction. — **Monastic vows**, the vows im-posed under monastic rule. They are three in number, poverty, chastity, and obedience.

4. *n.* A monk, a religious recluse preserved amongst the monastics. *Sir T Herbert, Travels in Africa, p 143*

It is plain that the treble value was intended spe-cially to protect the new monastics in their titles by height-ening the peril of disputing them. *R W Dixon, Hist Church of Eng, xv*

monastical (mō-nas'ti-kul), *a.* [*< monastic + -al*] Same as *monastic*.

monastically (mō-nas'ti-kal-ē), *adv.* In a mo-nastic manner, in a retired manner, after the manner of monks. *Swift*

monasticism (mō-nas'ti-sizm), *n.* [*< monastic + -ism*] 1 The corporate life of religious com-munities under the vows of poverty, celibacy, and obedience to a superior, the monastic sys-tem or condition.

It may be questioned whether anything but monasticism could have kept the church and clergy free from the po-litical combinations and dangers of the early time. *Stubbs, Const Hist., § 84*

2. The condition or state of living like a monk, in religious retirement from the world.

In older Anglo Saxon Britain monasticism itself had but seldom aspired either to the dreamy quietude of the East or the passionate and excessive austerity of the West. It was a religious profession, no more. *Milman, Latin Christianity, vii 1*

Cowley, Pindaric Odes, VIII 6

Right money, money paid as the condition or consideration of acquiring a right to the purchase of lands.

As no right money is to be paid for these lands, and quit rent of two shillings sterling a hundred, demandable some years hence only it is highly presumable that they will always be held upon a more desirable footing than where both these are laid on with a very heavy hand.

Washington, quoted in H. B. Adams, Washington's Interest in Western Lands.

Soft money, paper money. [Slang, U S.] — To coin money. See coin. — Token money. See token. — To make money, to gain or procure money, become rich. — To take eggs for money. See egg. — Value of money. See the quotation.

It will be well to deal with a use of the phrase value of money which has led to much confusion. In mercantile phraseology the value of money means the interest charged for the use of loanable capital. Thus, when the market rate of interest is high money is said to be dear, when it is low, money is regarded as cheap. Whatever may be the force of the reasons in favour of this use, it is only mentioned here for the purpose of excluding it. For our present subject the value of a thing is what it will exchange for, the value of money is what money will exchange for, or its purchasing power. If prices are low, money will buy much of other things, and is of high value. The value of money is inversely as general prices, falling as they rise and rising as they fall.

Encyc Brit, XVI 721

White money, silver coin, also, coin of base metal imitating silver.

moniment, *n.* An obsolete variant of *monument*.

Monimia (mō-nim'-i-ā), *n.* [NL. (Du Roi-Thouars, 1804), suggested by its affinity to a genus previously named *Mithridatea*, < *L. Monima*, < *Gr. Monimē*, wife of Mithridates.] A genus of dicotyledonous apetalous plants, type of the natural order *Monimiaceae* and of the tribe *Monimieae*. It is characterized by globose dioecious flowers the staminate becoming split into four to six lobes, by numerous stamens, each bearing two glands at its base, and by the fruit, which consists of several very small one-seeded drupes enclosed within the enlarged perianth. Three species are known natives of the Mascarene Islands. They are shrubs with rigid opposite leaves, and very small flowers, closely clustered in the axils. Fossil plants of this genus occur in the Tertiary formations of Europe and of Australia, and closely allied forms, called *Monimopsis*, at the very base of that formation in France and in the Fort Union group on the Yellowstone river in Montana.

Monimiaceae (mō-nim'-i-ā-sē-ō), *n. pl.* [NL. (Endlicher, 1836), < *Monimia* + *-aceae*] A natural order of dicotyledonous plants of the apetalous series *Mucembryae*, typified by the genus *Monimia*. It is characterized by a globose or cup-shaped perianth, toothed or deeply divided at the border, by numerous stamens covering the perianth, and by having several or many distinct ovaries, each with a single ovule, a minute embryo, and copious fleshy albumen. The order includes about 22 genera and 150 species natives of the warmer parts of South America, Asia, and the South Pacific Islands. They are trees, shrubs, or rarely climbers, generally aromatic, with rigid opposite leaves and small flowers, in axillary or sometimes terminal clusters, which are shorter than the leaves. Several furnish wood for building and cabinet-work, or leaves used as a tonic or an aromatic seasoning.

Monimieae (mon-i-mī'-ē-ē), *n. pl.* [NL. (A. L. de Jussieu, 1809), < *Monimia* + *-eae*] A tribe of plants of the natural order *Monimiaceae*, of which *Monimia* is the type. It is characterized by having pendulous ovules, and anthers opening by a longitudinal fissure (instead of uplifting valves as in the other tribe of the order, *Atheropernaeae*). It includes 8 genera, natives of tropical America, Australia, and adjacent islands, with one genus in Africa.

monimostylic (mon'-i-mō-stī'lik), *a* [*< Gr. monimos*, lasting, stable, + *stilos*, pillar] Having the quadrate bone fixed, as a skull, correlated with *autostylic* and *hyostylic*.

monieur, *n.* A Middle English form of *moneyer*.

monishment (mon'ish-mēt), *n.* [*< monish* + *-ment*] Admonition. *Sherwood*

monism (mon'izm), *n.* [*< Gr. μόνος*, single, + *-ism*] 1 Any system of thought which seeks to deduce all the varied phenomena of both the physical and spiritual worlds from a single principle, specifically, the metaphysical doctrine that there is but one substance, either mind (idealism) or matter (materialism), or a substance that is neither mind nor matter, but is the substantial ground of both opposed to *dualism*. The term was applied by Wolf, its inventor, to the forms of the doctrine which were then known, namely, to the denial of the substantiality either of mind or of matter, but it is now extended to the doctrine that the distinction between physical and mental facts is only phenomenal, and that in themselves they are not distinguished. Many special modifications of monistic speculation especially on its materialistic side, have accompanied the recent developments of physical science, particularly the doctrine of evolution. (See quotation from Haeckel under *monistic*.) Such doctrines as that energy, electricity, etc., are categories of substance different from matter are not taken account of by those who use the term, so that it is not easy to say whether they would be considered as denials of monism or not. Also called *unitism* and *unitarianism*.

Monism led a miserable existence in philosophical dictionaries until, as a denotation of the Hegelian philosophy, it obtained a very wide use. It had again in some measure fallen out of use when it was taken up by modern natural philosophy, and made the watchword of a doctrine which considers mind and matter neither as separated nor as derived from each other, but as standing in an essential and inseparable connection.

M. S. Phelps, tr. of Eucken's *Fundamental Concepts*, p. 114.

If the essence of the materialist hypothesis be to start with matter on its lowest terms, and work it then up into its highest, I did it no wrong in taking "homogeneous extended solids" as its specified datum and its only one, so that it constituted a system of *monism*.

J. Martineau, Materialism (1874), p. 108

2 Any theory or system which attempts to explain many heterogeneous phenomena by a single principle.

The solution offered by Psychophysical *Monism*, that functional brain motion and feeling are two aspects of one and the same fact in nature—this solution, when closely examined, turns out to be an altogether dualistic and unthinkable assertion. *E. Montgomery, Mind*, ix. 806.

3 In *bot.*, same as *monogenesis* (c). — **Hylozoistic monism**. Same as *hylozoism*. — **Idealistic monism**, the monism which regards the single principle of the universe as mind or spirit, of which matter is the product. — **Materialistic monism**, the monism which regards the single principle as matter, of which mind or spirit is the product. **monist** (mon'ist), *n.* and *a*. [*< mon(ism)* + *-ist*] 1. *n.* An adherent of the metaphysical doctrine of monism in some one of its forms.

The philosophical unitarians or *monists* reject the twofold many of consciousness to the ultimate duality of the subject and object in perception, but they arrive at the unity of these in different ways. Some admit the testimony of consciousness to the equipolence of the mental and material phenomena, and do not attempt to reduce either mind to matter, or matter to mind. They reject, however, the evidence of consciousness to their antithesis in existence, and maintain that mind and matter are only phenomenal modifications of the same common substance. This is the doctrine of absolute identity—a doctrine of which the most illustrious representatives among recent philosophers are Schelling, Hegel, and Cousin. Others again deny the evidence of consciousness to the equipolence of subject and object as coordinate and original elements, and, as the balance is inclined in favor of the one relative or the other, two opposite schemes of psychology are determined. If the subject be taken as the original and genetic, and the object be evolved from it as its product, the theory of idealism is established. On the other hand, if the object be assumed as the original and genetic, and the subject be evolved from it as its product, the theory of materialism is established. *Sir W. Hamilton, Metaph.*, xvi.

II. *a*. Same as *monistic*.

monistic (mō-nis'tik), *a* [*< Gr. μόνος*, single, + *-istic*] Of or pertaining to monism, of the nature of monism. See *monism* and *monist*.

Idealism is *monistic* in its whole conception of the universe. It claims to be a "one substance" theory, although it should in consistency call itself a "no-substance" theory instead. *Bibliotheca Sacra*, XLV. 108.

The opponents of the doctrine of evolution are very fond of branding the *monistic* philosophy grounded upon it as "materialism," by confusing philosophical materialism with the wholly different and censurable moral materialism. Strictly, however, our monism might, as accurately or as inaccurately, be called spiritualism as materialism. The real materialistic philosophy asserts that the vital phenomena of motion, like all other phenomena of motion, are effects or products of matter. The other, opposite extreme, spiritualistic philosophy, asserts, on the contrary, that matter is the product of motive force, and that all ma-

terial forms are produced by free forces entirely independent of the matter itself. Thus, according to the materialistic conception of the universe, matter or substance precedes motion or active force. According to the spiritualistic conception of the universe, on the contrary, active force precedes matter. Both views are dualistic, and we hold both of them to be equally false. A contrast to both views is presented in the *monistic* philosophy, which can as little believe in force without matter as in matter without force. *Haeckel, Evol. of Man* (trans.), II. 456.

Communities of a more or less monastic character in Palestine and Egypt before the diffusion of Christianity were the Essenes and Therapeutae (which see). The ordinary Christian life of the first three centuries, even when not celibate, was largely ascetic and in communities. Christian monasticism in a definite form originated in Upper Egypt in the third or fourth century (perhaps with St Anthony, according to other accounts it is traced to the ascetic Paul, about A D 250). The first monks were anchorites, living in solitude. The collection of anchorites in a monastery (*lania* or *conobium*) is ascribed to Pachomius, in the fourth century. The institution spread rapidly, and was greatly helped in the West by the establishment of the Benedictine order in the sixth century. Various developments of the monastic system are to be found in the middle ages, as the military orders, friars (often distinguished from monks proper), etc. Since the Reformation, and especially since the French revolution, monachism has declined in Western countries, or has been overshadowed by the society of Jesus, but still continues to flourish in Eastern churches.

simian, any one of the *Primates* except man and the lemurs, an ape, baboon, marmoset, etc. The term is very vague and has no technical or fixed restriction. Those monkeys which have very short tails and faces are commonly called *apes*, most of them belonging to the higher family *Simiidae*. The monkeys with long faces like dogs are usually termed *baboons*. They are at the bottom of the scale of Old World simians, in the family *Cynopithecidae*. The small bushy tailed monkeys of America are usually known as *newmonkeys*. Excluding these, the name *monkey* applies mainly to long tailed simians of either hemisphere. All the Old World monkeys, in any sense of the word, are catarrhine and have 32 teeth, as in man. They constitute two families, *Simiidae* and *Cynopithecidae*. (See cuts under *Cercopithecus*, *Catarrhina* and *Simia*.) All the New World monkeys are platyrrhine, there are two families, *Cebidae*, with 36 teeth and mostly prehensile tails, and *Mulidae* or marmosets, with 32 teeth and bushy non prehensile tails. (See cuts under *Cebinae*, *Frondae* and *Lagothrix*.) The genera of monkeys are about 35 in number including several that are fossil. The species are particularly numerous in Africa and South America especially in the tropical parts. There are many, however, in the warmer parts of Asia and even up to the snow line a single one is found in Europe, the Barbary ape *Urocyon caudatus* (See cut at *ape*). Almost all the leading species have specific names in the vernacular as well as such technical scientific designations.

Jack will suck the monkey, in whatever form or whatever he presents himself Macy

"Do you know what sucking the monkey means?" "No, sir." "Well then, I'll tell you. It is a term used among seamen for drinking rum out of coconuts, the milk having been poured out and the liquor substituted." Marryat, Peter Simple, xxx

monkey (mung'ki), *v* [*< monkey, n*] *I intrans* To act in an idle or meddling manner, trifle, fool as, don't monkey with that gun [Colloq]

I hope he'll fetch money I've had enough o' monkeying 'long o' checks Harper's Mag., LXXIX 466

II. *trans* To imitate as a monkey does, ape [Rare]

All cursed the deer for an evil
Called him enlarging on the Devil,
Then monkeying the Lord

Mrs. Browning, Tale of Villafraanca, st. 8

monkey-apple (mung'ki-ap'l), *n* The West Indian tree (*Cuscuta flava*)

monkey-bag (mung'ki-bag), *n* A small bag used by sailors for holding money, hung round the neck by a string

monkey-block (mung'ki-blok), *n* Naut., a small swivel-block used as a leader for running rigging

monkey-board (mung'ki-bōrd), *n* The conductor's footboard on an omnibus Hoppo [Slang Eng]

monkey-boat (mung'ki-bōt), *n* A half-decked narrow boat used in docks and on rivers [Eng]

monkey-bread (mung'ki-bred), *n* The fruit of the baobab-tree, also the tree itself. The fruit is an oblong indehiscent capsule 8 to 12 inches long, containing numerous seeds embedded in a pulp, which is slightly acid and edible by man as well as by the monkey. See baobab and Adansonia

monkey-cup (mung'ki-kup), *n* A plant of the genus *Acrochorda*

monkey-engine (mung'ki-en'jin), *n* A form of pile-driver having a ram or monkey working in a wooden frame. The monkey is held by a staple in a pair of tongs which seize it automatically, and is raised by means of a winch. The tongs open and drop the monkey when their handles come in contact with a couple of inclined planes at the top of the lift.

monkey-flower (mung'ki-flou'ei), *n* A plant of the genus *Mimulus*

monkey-gaff (mung'ki-gaf), *n* A small gaff placed on some large merchant ships above the spanker-gaff, for displaying the flag

a, Monkey-gaff

monkey-grass (mung'ki-grās), *n* A coarse stiff fiber afforded by the leaf-stalks of *Attalea funifera* used largely on the Amazon for cordage and brooms, and in London and Paris for the brushes of street-sweeping machines

monkey-hammer (mung'ki-ham'er), *n* A drop-press in which the weight, sliding in guides, is suspended from a cord by which it is raised and let fall. Also called monkey-press

monkeyism (mung'ki-izm), *n* [*< monkey + -ism*] An action or behavior like that of a monkey [Rare]

Numerous passages might be quoted (from comedies and satirical journals), attacking the monkeyism and parrotism of those who indiscriminately adopted foreign manners and customs D. M. Wallace, Russia, p. 418

monkey-jacket (mung'ki-jak'et), *n* A short close-fitting coat or jacket, generally made of stout material, as pilot-cloth, much worn by sailors in cold weather, a Guernsey frock.

monkey-pot (mung'ki-pot), *n* See *Lecythis* — Monkey-pot tree, the tree bearing the monkey pot fruit.

monkey-press (mung'ki-pres), *n* Same as monkey-hammer

monkey-pump (mung'ki-pump), *n* Naut., a straw or quill introduced through a gunlet-hole into a wine- or spirit-cask, for the purpose of sucking the liquor

monkey-puzzle (mung'ki-puz'l), *n* The Chili pine, *Aracacia imbricata*

monkey-rail (mung'ki-rāl), *n* Naut., a light rail raised about half a foot above the quarter-rail of a ship

monkey's-face (mung'ki-z-fās), *n* A plant of the genus *Mimusops*

monkey-shine (mung'ki-shīn), *n* A trick or prank like a monkey's, buffoonery, tomfoolery, monkeyism [Slang, U S]

You may have noticed barefooted boys cutting up monkey shins on trees with entire safety to themselves A. R. Grote, Pop. Sci. Mo., XIII 485

monkey-spar (mung'ki-spar), *n* Naut., a reduced mast or yard for a vessel used for the training and exercise of boys

monkey-tail (mung'ki-tāl), *n* Naut. (a) A short round lever formerly used for training cannonades and for like purposes (b) A piece of rope with a knot at the end, seized to the back of a hook, used as a handle in attaching the hook, to prevent the hand from being jammed

monkey-wheel (mung'ki-hwēl), *n* A tackle-block over which runs a hoisting-rope, a whip-gin, gun-block, or rubbish-pulley

monkey-wrench (mung'ki-reneh), *n* In mech., a screw-key with a movable jaw, which can be adjusted, by a screw or wedge, to the size of the nut which it is required to turn. Weale

monk-fish (mung'ki-fish), *n* 1. The angel-fish, *Squatina angelus* — 2. The angler, *Lophius piscatorius* [Maine]

monkhood (mung'ki-hūd), *n* [*< monk + -hood*]

1 The character or condition of a monk

He had left off his monkhood too, and was no longer obliged to them Bp. Atterbury

2 Monks collectively

I think the name of Martin Luther alone sufficient to relieve all monkhood from the reproach of lasciviousness Longfellow

monking (mung'king), *a* [*< monk + -ing*]

Monkish a term of contempt

Monasteries and other monking receptacles. Coleridge

monkish (mung'kish), *a* [*< monk + -ish*]

Like a monk; pertaining to monks or to the monastic system; monastic often a term of contempt. as, monkish manners, monkish solitude

monkishness (mung'kish-nes), *n*. The quality of being monkish; a term of contempt

monkly (mung'ki-li), *a* [*< monk + -ly*] Relating to a monk, monkish. [Rare]

monk-monger (mung'ki-mung'ger), *n* A fosterer of monasticism

Never age afforded more pluralist bishops Oswald (a great monk monger, of whom hereafter) held York and Worcester Fuller, Ch. Hist., II. v. 24

monk-seal (mung'ki-sēl), *n*. A seal of the genus *Monachus*.

monk-seam (mung'ki-sēm), *n* Same as monk's-seam

monk's-gun (mung'ki-gun), *n* The wheel-lock gun of the beginning of the sixteenth century so called from the legend that it had been invented by the monk Schwarz, the supposed discoverer of gunpowder.

monk's-harquebus (mung'ki-här'kwe-bus), *n* Same as monk's-gun

monk's-hood (mung'ki-hud), *n* A plant of the genus *Aconitum* especially *A. Napellus*. Also called friar's-cap, jacobine, helmet-flower, Jacob's-chariot, and wolf's-bane. See *Aconitum* and *aconite*

monk's-rhubarb (mung'ki-rō'bārb), *n*. A European species of dock, *Rumex Patens*. See dock

monk's-seam (mung'ki-sēm), *n* 1 Naut., a seam formed by stitching through the center of a joining made by laying the selvages of two cloths of canvas one over the other and stitching them on both sides. Also called middle stitching — 2 The mark left on a bullet by the mold at the junction of its two halves [Eng]

Also monk-seam

monmouth (mon'muth), *n* A flat cap originally made at Monmouth, England, formerly much worn by seamen

Caps which the Dutch seamen buy, called monmouth caps Defoe, Tour through Great Britain, II 339 (Davies)

Monmouth cock A fashion of wearing the flap-hat imitated from the Duke of Monmouth, son of Charles II, and still prevailing in the early part of the eighteenth century

The smartest of the country Squires appear still in the Monmouth Cock, and when they go a wooing, whether they have any post in the militia or not, they generally put on a red coat Spectator, No 129

Monmouth hat. A hat worn with a Monmouth cock

monnet (mon'et), *n* See the quotation

Little ears denote a good understanding, but they must not be of those ears which, being little, are withal deformed, which happens to men as well as cattle, which for this reason they call monnets for such ears signify nothing but mischief and malice

Saunders, Physiognomie (1653). (Nares)

mono (mō'nō), *n* [Sp. *mono*, m., a monkey, of *mona*] The black howler or howling monkey, *Myiodes villosus*

mono-. [*L*, etc. *mono-*, *< Gr* *μῶνος*, stem of *μόνος*, single, only see *monad*] A prefix in many words of Greek origin or formation, meaning 'single,' 'one'

monoaxial (mon-ō-ak'sal), *a* [*< Gr* *μῶνος*, single, + *ἀξίς*, axis see *axial*] Pertaining to a single axis — Monoaxial isotropy, the case in which the homotactic coefficients are completely isotropic round one axis only

monobasic (mon-ō-bā'sik), *a* [*< Gr* *μῶνος*, single, + *βάσις*, base] Having one base applied in chemistry to an acid which enters into combination with a univalent basic radical to form a neutral salt, or a salt containing one equivalent of a base.

monoblastic (mon-ō-blas'tik), *a*. [*< Gr* *μῶνος*, single, + *βλαστικός*, germ] Relating to that condition of the metazoic ovum or embryo which immediately succeeds segmentation, in which a single germinal layer is alone represented correlated with *diploblastic* and *triploblastic*.

Monoblepharides (mon-ō-blef-a-rīd'ē-ō), *n* pl [NL, *< Monoblepharis* (-īd-) + *-es*] A monotypic order of oömycetous fungi, closely related to the *Peronosporales*

The thallus-hyphae bear both terminal and interstitial oogones, in which the whole protoplasm contracts and forms the oöspore. Propagation takes place by the formation of unicelled zoospores in zoösporangia, as in the well known genus *Phytophthora*.

Monoblepharis (mon-ō-blef'a-rīs), *n*. [NL, (*Cornu*), *< Gr* *μῶνος*, single, + *βλέφαρον*, eyelid] A genus of fungi, typical of the order *Monoblepharidales*.

monobleps (mon-ō-blep'sis), *n* [NL, *< Gr* *μῶνος*, single, + *βλέψω*, sight, *< βλέπω*, see, look on] In *pathol.*, a condition of vision in which it is more distinct when one eye only is used.

monobranchius (mon-ō-brā'ki-us), *n*; pl. *monobranchii* (-i) [NL., < Gr. *monos*, single, + *L. brachium*, the arm.] In *teratol*, a monster having a single arm.

monobromated (mon-ō-brō'mā-ted), *a* [*<* Gr. *monos*, single, + *E. brom(ine)* + *-at*¹ + *-ed*²] Containing one bromine atom used only of organic compounds in which one atom of bromine has been introduced into each molecule by substitution or addition. — **Monobromated camphor** See *camphora monobromata*, under *camphor*.

monobromized (mon-ō-brō'mīzd), *a*. [*<* Gr. *monos*, single, + *brom(ine)* + *-ize* + *-ed*²] Same as *monobromated*. *Nature*, XI, 539.

monocarbonate (mon-ō-kār'bo-nāt), *n* [*<* Gr. *monos*, single, + *E. carbonate*] A carbonate in which both hydrogen atoms of the acid are replaced by basic elements or radicals distinguished from *bicarbonates*, in which only one hydrogen atom is so replaced. More appropriately called *normal carbonate*.

monocarp (mon-ō-kārp), *n* [*<* Gr. *monos*, single, + *καρπός*, fruit] In *bot*, a plant that perishes after having once borne fruit, an annual plant.

monocarpellary (mon-ō-kār'pe-lā-rī), *a* [*<* Gr. *monos*, single, + *E. carpel* + *-ary*¹] Composed of one carpel. Compare *polycarpellary*.

monocarpic (mon-ō-kār'pik), *a* [*<* *monocarp* + *-ic*] Same as *monocarpous* (*a*).

monocarpous (mon-ō-kār'pus), *a* [*<* *monocarp* + *-ous*] In *bot* (*a*) Producing fruit but once in its life said of annual plants (*b*) Noting a flower in which the gynoecium forms only a single ovary, whether simple or compound.

Monocaulidae (mon-ō-kā'li-dē), *n* pl [NL., < *Monocaulis* + *-idae*] A family of tubularian hydroids or gymnoblastic *Hydroids*, typified by the genus *Monocaulis*, having a simple hydrosoma with a single fixed hydranth.

Monocaulis, **Monocaulus** (mon-ō-kā'lis, -lus), *n* [NL., < Gr. *monos*, single, + *καυλός*, a stalk, stem see *caulis*] The typical genus of *Monocaulidae*. *M. pendula* is a simple tubular hydromedusa with a single hydranth pendulous upon the nodding or cerata stem, and bearing two circlets of tentacles. It is of very soft, delicate structure and pink color, attaining a length of 4 inches. Also *Monocaulis*.

monocellular (mon-ō-sel'ū-lār), *a* [*<* *monocellul* + *-ar*³] Same as *unicellular*. *Nature*, XLI, 148.

monocellule (mon-ō-sel'ūl), *n* [*<* Gr. *monos*, single, + *E. cellule*] A unicellular organism, an animal or a plant which consists of a single cell.

monocentric (mon-ō-sen'trik), *a* [*<* Gr. *monos*, single, + *κέντρον*, center see *centric*, 1. Having or proceeding from a single center — 2 In *anat*, unipolar applied to a rete mirabile which is not gathered again into a single trunk opposed to *amphicentric*.

Monocentridae (mon-ō-sen'tri-dē), *n*, pl [NL., < *Monocentris* + *-idae*] A family of acanthopterygian fishes, typified by the genus *Monocentris*. They have the body covered with large angular bone like scales, the head rounded and cavernous, a spinous dorsal fin separate from the soft dorsal and composed of 5 large spines divergated and not completely connected by membrane, and the ventrals represented only by very large spines. There is but one species, *Monocentris japonica* of the Japanese seas.

Monocentris (mon-ō-sen'tris), *n* [NL., < Gr. *monos*, single, + *κέντρον*, point, center see *center*¹] The typical genus of *Monocentridae*, characterized by the great development of the ventral spines. *Bloch and Schneider*, 1801. Also *Monocentrus*.

monocephalous (mon-ō-sef'a-lus), *a* [*<* NL. *monocephalus*, < Gr. *μονοκεφαλος*, one-headed, < *monos*, single, + *κεφαλή*, head] 1 Having only one head, in *bot*, bearing a single capitulum or head — 2 Specifically, having the character of a monocephalus.

monocephalus (mon-ō-sef'a-lus), *n*, pl *monocephali* (-li) [NL. see *monocephalous*] In *teratol*, a double monster having only one head but two bodies. Also called *syncephalus*.

monocerous (mon-ō-sēr'kus), *a* [*<* Gr. *monos*, single, + *κέρας*, the tail of a beast see *cervus*] Having only one "tail," or flagellum, unflagellate, as an infusorian.

monoceros (mō-nos'e-rus), *n*. [*<* L. *monoceros*, < Gr. *μόνκερος*, a unicorn, < *μόνκερος*, also *μονοκερος*, one-horned, < *monos*, single, + *κέρας*, horn.] 1 A unicorn, or some other one-horned animal, real or imaginary.

Mighty *Monoceroses* with immeasured tails.

Spenser, F. Q., II, xli, 23.

2. [cap.] A constellation, the Unicorn, south of the Twins and the Crab, and between the two

Dogs, introduced by Jacob Bartsch in 1624 — 3. The narwhal, *Monodon monoceros* — 4 [cap.] In *zool* (*a*) A genus of prosobranchiates of the family *Muricidae*, so called from the large spine on the outer lip, the unicorn-shells. There are several species from the west coast of America. *Lamarck*, 1809 (*b*) A genus of balistoid fishes. *Bloch and Schneider*, 1801.

monoceros (mō-nos'e-rus), *a* [*<* Gr. *μόνκερος*, one-horned see *monoceros*] Having one horn or horn-like part, unicorn.

monochasial (mon-ō-kā'si-al), *a* [*<* *monochasium* + *-al*] In *bot*, pertaining to or resembling a monochasium.

monochasium (mon-ō-kā'si-um), *n*, pl *monochasia* (-i) [NL., < Gr. *monos*, single, + *χασμ*, separation, chasm, < *χαίνειν*, gape see *chasm*] In *bot*, a cyme with one main axis, a uniparous cyme a term proposed by Eichler.

Monochitonida (mon'ō-kī-ton'i-dā), *n* pl [NL. (cf. Gr. *μονοχιτων*, wearing only a tunic), < Gr. *monos*, single, + *χιτων*, a tunic (see *chiton*), + *-ida*] A division of tunicaries or *Tunicata*, containing those which have the inner and outer integuments united in a single tunic, such as the *Salpidae* and *Doliolidae* opposed to *Dichitonida*. *Fleming*, 1828.

monochitonidan (mon'ō-kī-ton'i-dan), *a* and *n* 1 A having a single tunic, specifically, pertaining to the *Monochitonida*, or having then characters.

II. *n* A member of the *Monochitonida*, as a salp or doliolid.

Monochlamydeae (mon'ō-kla-mīd'ē-ē), *n* pl [NL. (A. P. de Candolle, 1819), fem. pl. of *monochlamydeus* see *monochlamydeous*] A division of dicotyledonous plants, characterized by apetalous flowers — that is, flowers with a perianth of a single row of envelopes — and so distinguished from the divisions *Polypetalae* and *Gymnopetalae*, which have two rows, or both calyx and corolla, the *Apetalae*. It includes 90 orders, among them the anaranth, chenopod, buckwheat, pepper, laurel, euphorbia, nettle, walnut, oak, and willow families.

monochlamydeous (mon'ō-kla-mīd'ē-us), *a* [*<* NL. *monochlamydeus*, < Gr. *monos*, single, + *χλαμύς* (*χλαμύδ*), a cloak see *chlamys*]

In *bot*, having a single instead of a double perianth applied to flowers. The missing set is considered to be the inner, or corolla. Compare *achlamydeous* and *dichlamydeous*. See *Monochlamydeae*.

monochord (mon'ō-kōrd), *n* [= F. *monocorde*] = Sp. *Pg. monocordio* = It. *monocordo*, < L. *monochordos*, *monochordon*, < Gr. *μονόχορδος*, a monochord, neut. of *μόνος*, < *μονός*, with a single string, < *monos*, single, + *χορδή*, string.] An acoustical instrument, invented at a very early date in Egypt or Greece, consisting of a long resonance-box over which a single string of gut or wire is stretched, the vibrating length, and thus the pitch, of which is fixed by a movable bridge. The position of the bridge required to produce particular intervals may be mathematically determined, and marked on the body of the instrument. The monochord has been much used in acoustical demonstration and in teaching pure intonation. In the middle ages smaller instruments with several strings were made, and were often permanently tuned to give certain intervals. (See *hecton* (*a*)). The notion of a primitive keyboard instrument doubtless sprang from some such beginning.

monochroic (mon-ō krō'ik), *a* [*<* (Gr. *μονόχρως*, of one color, < *monos*, single, + *χρῶμα*, color)] Having but one color, monochromatic.

monochromatic (mon'ō-krō-mat'ik), *a* [= F. *monochromatique* = Pg. *monochromatico*, < Gr. *μονοχρόματος*, of one color, < *monos*, single, + *χρῶμα* (-*τ*), color see *chromatic*] Consisting of light of one wave-length, and in that sense of one color only, as the light produced by a Bunsen flame in which sodium is being volatilized. The light of the flame is almost entirely that due to the two sodium lines, the colors of which are barely distinguishable from one another, and the consequence is that objects viewed by this light are all yellow and differ only in form and illumination. A monochromatic light gives a single bright line when viewed with the spectro scope.

monochrome (mon'ō-krōm), *n* [= F. *monochrome* = Pg. *monochroma*, < ML. *monochroma*,

Monoceros imbricatus

fem. of L. *monochromos*, < Gr. *μόνχρωμος*, also *μονοχρωματος*, of one color (see *monochromatic*), < *monos*, single, + *χρῶμα*, color.] Painting or a painting in one color, which may, however, be relieved by the use of lighter and darker shades. Compare *cammeu* and *grisaille*.

monochromical (mon-ō krō'mi-kal), *a* [As *monochrom(at)u* + *-al*] Of a single color, one-colored.

monochromy (mon'ō-krō-mī), *n* [As *monochrom* + *-y*³] The art or practice of painting in monochrome, or in one or more shades of a single color.

Monochromy is advantageously employed when it is desired on the one hand, to avoid the brilliancy attendant on the introduction of several distinct colours, and on the other, the dullness consequent on the exclusive use of a single tone. O. N. Road, Modern Chromatics, p. 810.

monochronic (mon-ō-kron'ik), *a* [*<* L. *monochronicus*, of the same time or measure, < Gr. *μονόχρονος*, of the same time or measure, consisting of one time or measure, temporary, < *monos*, single, + *χρονος*, time] Of one and the same time, existing or happening at the same time, contemporaneous, in *geol*, deposited, or apparently deposited, at the same period said of organic remains.

monochronous (mō-nok'io-nus), *a* [*<* Gr. *μονόχρονος*, of the same time or measure see *monochronic*] In *anc. pros*, consisting in or equal to one time or mora, monosemic.

monociliated (mon-ō-sil'i-a-ted), *a* [*<* Gr. *μόνος*, single, + NL. *ciliu*m + *-at*¹ + *-ed*²] Having one cilium or flagellum, uniciliate or uniflagellate.

monocle (mon'ō-kl), *n* [= OF. *monocle*, one-eyed, F. *monocle*, a single eye-glass, < L. *monoculus*, one-eyed see *monoculus*] 1 A monoculous or one-eyed animal, a monocle — 2 A glass for one eye, a single eye-glass.

Another [man], with a monocle in his eye, watched each new comer, his vacant and necessarily glassy stare expressing neither present pleasure nor anticipation. *The Century*, XXXIII, 208.

Monoclea (mon-ō-klē'a), *n* [NL. (W. J. Hooker, 1820), so called because the sporangia open only on one side, < Gr. *μονα*, single, + *κλίμα*, a key] A monotypic genus of cryptogamous plants of the class *Hepaticae*, giving name to the order *Monocleaceae*. They are small plants with frondose thallus, and have much the appearance of *Marchantia*.

Monocleaceae (mon'ō-klē-ā-sē-ē), *n* pl [NL. (Nees von Esenbeck, 1833-8), < *Monoclea* + *-aceae*] A small order of cryptogamous plants of the class *Hepaticae*, intermediate in position between the *Jungermanniaceae* and the *Anthocerotaceae*. The vegetative structure is either thalloid or foliose; the sporangium dehiscens longitudinally, and contains claters but has no columella. The order contains the genera *Calobryum* and *Monoclea*.

monoclinal (mon'ō-klī-nal), *a* and *n* [*<* *monoclinus* + *-al*] I. *a* In *geol*, dipping in one direction said of a zone of stratified rocks throughout which the strata all incline toward the same point of the compass. The term was introduced by H. D. Rogers (1842), and has taken the place of Darwin's hybrid word *unclinal* thus, monoclinical valley (a valley bounded by ridges the strata of which all dip in the same direction) monoclinical ridge, monoclinical flexure etc. A *monoclinical flexure* may be regarded as a half of an anticlinal fold, which would have been completed had the flexing action not been limited to one side of the axis, the strata assuming their horizontality on the other side.

The Echo Cliff flexure, the Water Pocket flexure, one of the grandest monoclinals of the west, and the San Rafael flexure, all *monoclinical* flexures of imposing dimensions and perfect form. Capt. Dutton considers go far back in Tertiary time, and possibly are pre-Tertiary.

Leads, Origin of Mountain Ranges, p. 260.

II. *n* A monoclinial fold or flexure. See I.

monocline (mon'ō-klīn), *n* [*<* (Gr. *μόνος*, single, + *κλίω*, incline, < *-at*¹] Same as *monoclinus*.

monocline (mon'ō-klīn), *n* [*<* (Gr. *μόνος*, single, + *κλίω*, incline see *cline*] Same as *monoclinus*.

monoclinic (mon-ō-klīn'ik), *a* [= F. *monoclinique*, < Gr. *μόνος*, single, + *κλίω*, incline] In *mineral*, an epithet noting that system of crystallization in which the crystals are restricted to three unequal axes, two of which intersect each other at an oblique angle, while they are at right angles to the third. See *crystallography*. Also *monosymmetric*, *clinohombic*, *hemiorthotypic*, *monoclinometru*, and *monoclinohedric*.

monoclinohedric (mon-ō-klī-nō-hed'rik), *a* [*<* Gr. *μόνος*, single, + *κλίω*, incline, + *ἔδρα*, seat, base] Same as *monoclinus*.

monoclinometric (mon-ō-kli-nō-met'rik), *a.* [*Gr* *μόνος*, single, + *κλίσις*, incline, + *μέτρον*, measure.] Same as *monochronic* as, "*monoclinometric prisms*," *Frey*

monoclinous (mon-ō-kli-nus), *a* [*Gr* *μόνος*, single, + *κλίσις*, bed, + *κλίσις*, incline see *cline*] 1 In *bot.*, hermaphrodite, or having both stamens and pistils in the same flower. —2 In *zool.*, monochual

Monocelia (mon-ō-se'li-ā), *n pl* [NL., < *Gr* *μόνος*, single, + *κελίαι*, a cavity, hollow see *celia*] Animals whose cephalocoele is single, neuron epaxial only, and axon unsegmented. The lancelet (*Branchiostoma*) is the only example. By nomenclature with *Acerina*, *Cephalochorda*, *Leptocardia*, and *Monocelaria* *Wüder*, *Amer Nat.*, Oct., 1887, p 914

monocellian (mon-ō-sē'li-an), *a* [*Gr* *Monocelia* + *-an*] Having the cephalocoele single, specifically, of or pertaining to the *Monocelia*

mono-compound (mon-ō-kom'pound), *n* [*Gr* *μόνος*, single, + *Ε* compound¹] In *chem.*, a compound containing one atom of the element or one individual of the radical specified, as monochloroacetic acid, which contains one atom of chlorine, and monophenylamine, which contains one molecule of phenyl

Monocodyla (mon-ō-kon'di-lā), *n pl* [NL., < *Gr* *μόνος*, single, + *κόνδυλος*, a knuckle, joint, knob see *condyle*] The *Reptilia* and *Ires* (reptiles and birds) collectively so called from the single occipital condyle characteristic of these classes among the higher vertebrates. The term indicates a group exactly continuous with *Sauropsida* Opposed to *Amphicodyla*

monocodylar (mon-ō-kon'di-lar), *a* Same as *monocodylian*

monocodylian (mon-ō-kon'di-li-an), *a* [*As* *Monocodyla* + *-an*] Having one occipital condyle, as the skull of birds, reptiles, and some fishes distinguished from *duocodylian*

monocotyledon (mon-ō-kot-i-lē'don), *n* [*Gr* *μόνος*, single, + *κοτύλη*, a hollow, a sucker, etc. see *cotyledon*] A monocotyledonous plant; an endogen. See *endogen*, and *cut under cotyledon*

Monocotyledones (mon-ō-kot-i-lē'don-ēs), *n pl* [NL. (Ray, 1703), < *Gr* *μόνος*, single, + *κοτύλη*, a cup-shaped cavity see *cotyledon*] A natural class of flowering plants, having a single seed-leaf or cotyledon in the embryo. They have generally the parts of their flowers in threes (not in fives, as in dicotyledons), their earliest leaves alternate, and the veins parallel. From the structure of the stem, increasing by internal or endogenous growth, they are also called *endogens*. The wood of their stems occurs in longitudinal bundles of fibers, scattered as in Indian corn, or becoming compact as in palms. New bundles of fibers form between the old not as in dicotyledons or exogens, in an annual external layer enveloping the stem. This class is divided into 4 orders, among which are the lily, the monocotyledons, banana, palm, pineapple, scowpine, arum, rush, sedge, and grass families. By Benham and Hooker these are classed in seven groups or series, by others in three, the *spadiceous*, the *lilaceous*, and the *glumaceous* divisions. About 20,000 species are known included in about 1,600 genera.

monocotyledonous (mon-ō-kot-i-lē'don-us), *a* [*Gr* *μόνος*, single, + *κοτύλη*, a hollow, a sucker, etc. see *cotyledon*] In *bot.*, having only one seed-leaf or seminal leaf

monocracy (mon-ō-kra-si), *n* [*Gr* *μόνος*, single, + *κρατος*, rule, < *κράτος*, strength] Government or rule by a single person, autocracy

A scene of wholesale bacchanalian fraud, a posse comitatus of liars, which would disgust any man with a free government, and make him sigh for the monocracy of Constantinople. *Sydney Smith, Ballot (Latham)*

monocrat (mon-ō-kra-t), *n* [*Gr* *μόνος*, single, + *κρατος*, rule, < *κράτος*, strength] 1 One who governs alone, an autocrat —2 In *U S hist.*, a name often applied by opponents to a member of the Federalist party, to which monarchical tendencies were imputed

monocular (mo-nok'ū-lar), *a* [= *F.* *monoculus*, one-eyed see *monocu-*

lous.] 1 Having only one eye. Also *monocularite*. —2. Of or referring to one eye or vision with one eye, suited or intended for the use of one eye only — *Monocular microscope* See *microscope*

monocularly (mo-nok'ū-lar-li), *adv.* By means of one eye, so as to be seen by one eye only

No one who has only thus worked monocularly can appreciate the guidance derivable from binocular vision. *W B Carpenter, Micros.*, § 38.

monoculate (mo-nok'ū-lāt), *a* [*As* *monoculus* (ar) + *-ate*¹] Same as *monocular*, 1

monocule (mon-ō-kūl), *n* [*Gr* *μόνος*, single, + *κελίαι*, a cavity, hollow see *celia*] A member of the genus *Monoculus*

monoculite (mo-nok'ū-lit), *n* [*Gr* *μόνος*, single, + *κελίαι*, a cavity, hollow see *celia*] A fossil animal that appears to have but one eye

monoculous (mo-nok'ū-lus), *a* [= *OF* *monocle*, *monocule* = *Sp* *monoculo* = *It* *monocolo*, < *LL* *monoculus* one-eyed, < *Gr* *μόνος*, single, + *κελίαι*, eye see *oculus* Cf *monocle*] One-eyed, monocular

Dr Knox was the monoculous Waterloo surgeon, with whom I remember breakfasting. *O W Holmes, The Atlantic*, LIX 638

Monoculus (mo-nok'ū-lus), *n* [NL., < *LL* *monoculus*, one-eyed see *monoculous*] 1 An old and disused genus of the Linnean class *Insecta* and order *Aptera*, having or seeming to have only one eye — that is, two eyes enclosed in one. These "apterous insects" were entomological crustaceans. *Monoculus* and some other entomological names were afterward made by Latreille his first order of *Entomothra*, called *Branchiopoda* and divided into two principal sections, *Lophyropoda* and *Phyllophoda*

2 [*l c*] A one-eyed animal; a monocule or monocle —3 [*l c*] A bandage for one eye

monocycle (mon-ō-sī-kl), *n* [*Gr* *μόνος*, single, + *κύκλος*, a circle, a wheel see *cycle*¹] A vehicle with one wheel used figuratively in the quotation [Rare]

Nay, a not infrequent "penance" consists in tying the hands to the ankles, and turning round and round like a cart wheel. Near Gorakhpore the train of Lord Dalhousie met dozens of these animated monocycles. *Pop Sci Mo*, XXII 263

Monocyclia (mon-ō-sī-kl-i-ā), *n pl* [NL., < *Gr* *μόνος*, single, + *κύκλος*, a circle see *cycle*¹] A division of holothurians containing those in which the tentacles are in one circle or series correlated with *Heterocyclia*

monocyclic (mon-ō-sī-kl-ik), *a* [*Gr* *μόνος*, single, + *κύκλος*, a circle, a wheel see *cycle*¹] 1 Disposed in a single whorl or circular series, as the stamens in many flowers —2. Of or pertaining to the *Monocyclia*

monocyst (mon-ō-sist), *n* [*Gr* *μόνος*, single, + *κύστις*, a bag, pouch] A tumor consisting of only one cyst. *Thomas, Med Diet*

Monocystaceae (mon-ō-sis-tā-sē-ā), *n pl* [NL., < *Gr* *μόνος*, single, + *κύστις*, a bladder, + *-αία*] A family of fungi of the order *Monadiales*. They are moisture loving plants, occurring on living *Algae* and *Protozoa*, with the organs of reproduction reduced to the form of sporangia. The family contains 3 genera.

monocysted (mon-ō-sis-ted), *a* [*As* *monocyst* + *-ed*¹] Having a single cyst, monocystidean

The developmental history of the *monocysted* gregarines. *T Gld, Smithsonian Report*, 1886

monocystic (mon-ō-sis'tik), *a* [*Gr* *μόνος*, single, + *κύστις*, a bag, pouch] Consisting of a single cyst, as a gregarine. *Encyc Brit*, XIX 853

Monocystidae (mon-ō-sis-tid-ē-ā), *n pl* [NL., < *Monocystis* + *-idae*] A division of *Gregarinida*, containing those gregarines whose body consists of a single sac contrasted with *Dicystidae*. Also *Monocystidae*, as a family

monocystidean (mon-ō-sis-tid-ē-an), *a* Monocysted, or of pertaining to the *Monocystidae*

Monocystis (mon-ō-sis'tis), *n* [NL., < *Gr* *μόνος*, single, + *κύστις*, a bag, pouch] The typical genus of *Monocystidae*. *M. agilis* is found in the male organ of the earthworm

Monocytaria (mon-ō-sis-tā'ri-ā), *n pl* [NL., < *Gr* *μόνος*, single, + *κύτταρον*, dim of *κύτταρος*, a hollow, a cell, < *κύτος*, a hollow.] A division of *Radiolaria*, containing those radiolarians which have a single central capsule distinguished from *Polycytaria*. Most radiolarians are of this character. Also called *Monozoa*

monocytarian (mon-ō-sis-tā'ri-an), *a* and *n* [*As* *Monocytaria* + *-an*] 1 *a* Having a single central capsule, as a radiolarian, or of pertaining to the *Monocytaria*. Also *monozoon*

2 *n* A radiolarian whose central capsule is single

monodactyl, **monodactyle** (mon-ō-dak'til), *a* Same as *monodactylous* *Nature*, XXXVIII. 623.

monodactylic (mon-ō-dak'til'ik), *a* [*Gr* *μόνος*, single, + *δάκτυλος*, a finger, a dactyl see *dactylic*] In *anc. pros.*, containing but one dactyl noting certain logædæic meters. See *monanapestic*

monodactylous (mon-ō-dak'ti-lus), *a* [= *F.* *monodactyle* = *Pg* *monodactylo*, < *Gr* *μονοδάκτυλος*, one-fingered, < *μόνος*, single, + *δάκτυλος*, a finger or toe see *dactyl*] 1 Having but one finger or toe, unidigitate —2 In (*rustacea*, subchelate applied to the subcheliform limbs of crustaceans and arachnids, in which there is no opposable finger to convert the terminal hook into a pincer-like claw or chela proper

monodelph (mon-ō-delf), *n* [*Gr* *μόνος*, single, + *δελφίς*, womb] A monodelphian mammal

Monodelphia (mon-ō-del'fi-ā), *n pl* [NL., < *Gr* *μόνος*, single, + *δελφίς*, womb] The highest of three primary divisions of mammals, or subclasses of the class *Mammalia* (the other two being *Didelphia* and *Ornithodelphia*), placental mammals, or *Placentalia*. The subclass contains all mammals except the marsupials and monotremes. The young are retained in the womb by means of placental attachment till they are well developed, the scrotum is never in front of the penis, and the uterus and vagina are never paired. The brain has a well developed corpus callosum, and comparatively small anterior commissure. The *Monodelphia* are variously divided into an upper and a lower series, *Eutheria* or *Megasthena* and *Metasthena* or *Microsthenia*, or into *Archicephala* (man alone), *Gyrencephala*, and *Lancecephala*, or directly into a number of orders. The orders of living monodelphians now usually adopted are eleven: *Primates*, *Fera*, *Inguipata*, *Hy racoidea*, *Proboscidea*, *Sirenia*, and *Cete*, of the upper series, and *Chiroptera*, *Insectivora*, *Glires* (or *Rodentia*), and *Birda* (or *Edentata*), of the lower series. The families are about 120 in number. *Eutheria* is a synonym. Also, wrongly *Monadelphia*

monodelphian (mon-ō-del'fi-an), *a* and *n* [*Gr* *Monodelphia* + *-an*] 1 *a* Having the female generative passages single, specifically, pertaining to the *Monodelphia*, or having then characters

II. *n* A monodelphian mammal

monodelphic (mon-ō-dēl'fik), *a* [*Gr* *monodelph* + *-ic*] Same as *monodelphian*

monodelphous (mon-ō-dēl'fus), *a* Same as *monodelphian*

monodia (mō-nō'di-ā), *n* Same as *monody*

monodic (mō-nō'dik), *a* [= *It* *monodico*, < *Gr* *μονωδικός*, < *μονωδία*, a monody see *monody*] In *music*, pertaining to monody or homophony, homophonic. Also *monophonic* — **Monodic school** or *style*, that style of composition which supplanted the purely polyphonic or contrapuntal about 1600

monodical (mō-nōd'ī-kal), *a* [*Gr* *monodie* + *-al*] Same as *monodu*

monodically (mō-nōd'ī-kal-i), *adv* In a monodie manner

monodichlamydeous (mon-ō-dī-kla-mīd'ē-us), *a* [*Gr* *μόνος*, single, + *δύο*, two, + *χλαμύς* (*χλαμύς*), a cloak] In *bot.*, having indifferently either a calyx only, or both calyx and corolla. *Lindley* [Not now in use]

monodimetric (mon-ō-dī-mē'trik), *a* [*Gr* *μόνος*, single, + *δίς*, twice, + *μέτρον*, measure see *dimetric*] In *crystal*, same as *dimetric* or *tetragonal*

monodist (mō-nōd'ist), *n* [= *Pg* *monodista*, as *monod-y* + *-ist*] One who composes or sings in a monodie style, as opposed to the polyphonic style opposed to *contrapuntist*

Monodon (mon-ō-don), *n* [NL., < *Gr* *μονόδοντος* (*μονόδοντ-*), having but one tooth see *monodont*] 1 A genus of delphinoid odontocete cetaceans, containing only the narwhal, *M monodon*, distinguished by its unique dentition. With the exception of some rudimentary and irregular teeth, the whole dentition consists of a pair of teeth lying

Skull and Tusk of Male Narwhal (*Monodon monodon*)

horizontally in the jaw, in the female they remain embedded and cemented in their sockets but in the male the left one grows into an enormous tusk, like a horn projecting from the forehead, sometimes half as long as the entire animal, straight, slender, cylindrical, but spirally grooved sinistrally, and thus resembling a rope. The vertebrae are 50 in number, the ribs 11, the cervical are normally free, and there is no dorsal fin. See *cut under narwhal*

2 In *conch*, same as *Monodonta* *Cuvier*, 1817.

monodont (mon-ō-dont), *a* [*Gr* *μονόδοντος* (*μονόδοντ-*), having but one tooth, < *μόνος*, single, + *δόντις* = *E.* *tooth*] Having only one tooth.

Monodonta (mon-ō-don'tā), *n* [NL., < *Gr* *μονόδοντος* (*μονόδοντ-*), having but one tooth. see *monodont*] A genus of top-shells of the family *Trochidae*, having a toothed columella named

Monocotyledonous 1 embryo
1. A section of wheat (*Triticum vulgare*)
2. Germinating plantlet of Indian corn (the test of the seed and the endosperm removed to show the cotyledon) *C* cotyledon *R* the primary root, *r* secondary root

Monodonta latro

Monodonta (lanculus) pharosius

by Lamarck in 1799. There are a number of species, known as *rosary-shells*.

Monodontinae (mon-ō-don-tī-nē), *n pl.* [NL., < *Monodon* (t-) + *-ina*] The narwhals as a subfamily of *Delphinidae* now usually merged in the subfamily *Delphinapterinae*.

Monodora (mon-ō-dō-rā), *n* [NL. (Dunal, 1817), so called in allusion to the solitary flowers, < Gr *μόνος*, single, + *δώρα*, gift.] A genus of dicotyledonous polypetalous plants of the order *Anonaceae* and the tribe *Mitrephoreae*, distinguished by a one-celled compound ovary with numerous seeds attached over the whole surface of the walls. They are trees with large solitary variegated flowers hanging upon a long stalk which terminates the stem or is opposite the leaves. They have three sepals six wavy petals many short stamens, and a shield shaped stigma. Their large globose woody fruit contains numerous seeds in a resinous central pulp. There are 4 species, natives of central Africa, of which *M. Myrsine*, the calabash nutmeg, furnishes in its seeds a nutmeg like spice. It is cultivated in Jamaica, etc., and hence called *American*, *Jamaica*, and *Mexican nutmeg*. *M. Angoniensis* yields a similar product.

monodrama (mon-ō-dra-mā), *n* [NL., < Gr *μόνος*, single, + *δράμα*, a drama.] A dramatic piece for a single performer or actor sometimes used also for a piece for two performers.

monodramatic (mon-ō-dra-mat'ik), *a* [< *monodrama* + *-atic*] Pertaining to a monodrama.

monodramet, *n* [< *monodrama*] Same as *monodrama*.

monodromic (mon-ō-drom'ik), *a* [< Gr *μόνος*, single, + *δρόμος*, a course, running, race.] In *math*, having a single sheet in the Riemann's surface, not having different values for one value of the variable. A *monodromic function* is one having the property that if, by a continuous change, the variable makes an excursion and returns to its original value, the function will also return to its original value. Also *monotropic*.

monody (mon-ō-dī), *n pl monodies* (-diz) [Also *monodia*, = *F monodia* = *Sp monodia* = *Pg It monodia*, < ML *monodia*, < Lf *monodia*, *monodum*, < Gr *μόνος*, a solo, lament, < *μόνος*, single, + *ὄδῃ*, a song, ode see *ode*.] 1 In *music* (a) A style of composition in which one voice-part decidedly preponderates in interest over the others, homophony opposed to *polyphony*, in which all the voice-parts are equally important. The term is specially applied to the modern style which arose somewhat before 1600 in Italy, and which led rapidly to the invention and great popularity of the opera, the oratorio, and the instrumental suite. The style itself had long before been known in popular songs and dances, but only then asserted itself as a controlling power in artistic music. (b) A piece written in monodic style, a melody, tune, or air, usually for the voice. (c) A composition written in one part only, a solo. Also *monophony*.

Funeral songs were called *Monodia* if they were uttered by one alone, and this was used at the interment of Princes and others of great account, and it was reckoned a great difficulty to vac such ceremonies.

Puttenham, *Arte of Eng Poetrie*, p 39

2 Monotonous sound, monotonousness of sound.

Hear the tolling of the bells—
Iron bells!

What a world of solemn thought their *monody* compels!
Poe, *The Bells*, iv

monodynamic (mon-ō-dī-nam'ik), *a* [< Gr *μόνος*, single, + *δυναμική*, power see *dynamis*.] Having but one power, capacity, or talent [Rare]

Monodynamic men, men of a single talent, are rarely misapprehended.
De Quincey

Monocæ (mō-nē-kā), *n pl* [NL., < Gr *μόνος*, single, + *οἶκος*, house.] In De Blainville's classification (1825), the second of three sub-classes of his *Paracéphalophora*, contrasted with *Dioica* and *Hermaphrodita*, named in the form *Monocæ*.

Monocæa (mō-nē-shū-kā), *n pl* [NL., < Gr *μόνος*, single, + *οἶκος*, house.] The twenty-first class of plants in the artificial system of Linnæus. In this class the stamens and pistils are in separate flowers on the same plant, as in the *Araceæ*.

monocæan, monocæan (mō-nē-shū-an), *a*, and *n* [< *monocæous* + *-an*.] 1. *a* Same as *monocæus*.

II. *n* A monocæous animal.

monocæous, monocæous (mō-nē-shus), *a*. [< Gr *μόνος*, single, + *οἶκος*, house.] 1. In bot (a) In phanerogams, having the stamens and pistils in different flowers on the same plant (b) In cryptogams, having both male and female organs on the same individual—2 In zool, having both male and female sexual organs, hermaphrodite, androgynous applied according to the corresponding usage in botany opposed to *dioecious*. In numberless lower invertebrates the male and female products of generation, or ova and spermatozoa, mature in the same individual without sexual intercourse. In many other cases, as those of worms and snails, every individual is both male and female, but there is sexual intercourse and reciprocal impregnation between two individuals.

monocæously, monocæously (mō-nē-shus-li), *adv* In a monocæous manner, with a tendency to monocæism—**Monocæously polygamous**, in bot See *polygamous*.

monocæism, monocæism (mō-nē-shūz-m), *n* [< *monocæous* + *-ism*.] The state or quality of being monocæous, hermaphroditism, androgyny.

monoembryony (mon-ō-em'brī-on-ī), *n* [< Gr *μόνος*, single, + *ἐμβρυον*, embryo see *embryo*.] In bot, the condition of possessing only a single embryo, as the seeds of most angiosperms.

monoflagellate (mon-ō-flaj'e-lāt), *a* [< Gr *μόνος*, single, + *ἑλῆ*, flagellate, a.] Monomastigote or uniflagellate, as an infusorian.

monogam (mon-ō-gam), *n* [< LL *monogamus*, < LGr *μόνος*, married but once see *monogamous*.] In bot, a plant that has solitary flowers with the anthers united.

Monogamia (mon-ō-gā'mī-an), *n pl* [NL., < LGr *μόνος*, married but once see *monogamous*.] In bot, one of the six orders of the nineteenth class, the *Syngeusia*, in the Linnæan system, in which the flowers are solitary and have united anthers.

monogamian (mon-ō-gā'mī-an), *a* Same as *monogamous*.

monogamic (mon-ō-gam'ik), *a* [< MGr *μόνος*, married but once see *monogam*.] Same as *monogamous*. H. Sidgwick, *Methods of Ethics*, p 227.

monogamist (mon-ō-gā'mīst), *n*. [< *monogamy* + *-ist*.] 1 One who has been married only once, one who believes that a person should not marry oftener than once—that is, that a widower or widow should not remarry.

I maintained that it was unlawful for a priest of the Church of England, after the death of his first wife, to take a second, or, to express it in one word, I valued myself upon being a strict *monogamist*.
Goldsmith, *Vicar*, II

2 One who has but one (living and undivorced) wife, as opposed to a *bigamist* or a *polygamist*.

monogamistic (mon-ō-gā'mīst'ik), *a* [< *monogamist* + *-ic*.] Same as *monogamous*.

monogamous (mō-nog'ā-mus), *a* [< F *monogame* = *Sp monogamo* = *Pg It monogamo*, < LL *monogamus*, < LGr *μόνος*, married but once, < Gr *μόνος*, single, + *γαμος*, marriage.] 1 Practising or supporting the principle of monogamy. (a) Marrying only once—that is, not remarrying after the death of the spouse opposed to *bigamous*. (b) Marrying only one at a time opposed to *bigamous* or *polygamous*.

2. Of or pertaining to monogamy, as, *monogamous* doctrines or customs.—3 In zool, having only one mate, living in pairs—as, a *monogamous* family of birds.—4 In bot, having solitary flowers with united anthers, as in *Lobelia*.—**Doubly monogamous**, in ornith., said of birds the male of which takes part in nest-building, incubation, and care of the young, as pigeons and many other birds.

monogamy (mō-nog'ā-mī), *n* [= F *monogame* = *Sp monogamia* = *Pg It monogamia*, < LL *monogamia*, < LGr *μόνος*, single marriage, < *μόνος*, married but once see *monogamous*.] 1 The practice of marrying only once, or the principle which upholds that practice, the principle that forbids remarriage after the death of a former husband or wife—opposed to *bigamy*. See *bigamy*, 2.—2. The condition of being mar-

ried to only one person at one time—opposed to *bigamy* or *polygamy*. See *bigamy*, 1.

The monogamy of the modern and western world is, in fact the monogamy of the Romans, from which the license of divorce has been expelled by Christian morality.
Maine, *Lary Hist of Institutions*, p 60

3 In zool, the habit of having only one mate; the habit of living in pairs, the paired state—**Double monogamy**, in ornith., the state or habit of being doubly monogamous. See phrase under *monogamous*.

monoganglionic (mon-ō-gang-gli-on'ik), *a* [< Gr *μόνος*, single, + *ἑ γανγλίον* + *-ic*.] Having a single ganglion.

monogastric (mon-ō-gas'trik), *a*. [= F *monogastrique*, < Gr *μόνος*, single, + *γαστήρ*, stomach see *gaster*, < *gastri*.] Having only one stomach or digestive cavity—**Monogastric Diphyds** or **Diphyds**. See the quotation under *diphyd*.

Monogenea (mon-ō-jē-nē-kā), *n pl* [NL., < Gr *μόνος*, only-begotten, single see *monogamous*.] A division of fluke worms or trematodes, containing those which undergo scarcely any change or comparatively little transformation in development—opposed to *Digenæa*. There are several families and numerous genera.

monogeneous (mon-ō-jē-nē-us), *a* [< Gr *μόνος*, single, + *γενεα*, kind.] 1 In biol generated in the same form as that of the parents; homogeneous as regards stages of development specifically said of the *Monogæna*.—2 In math., having a single differential coefficient.

monogenesis (mon-ō-jen'e-sis), *n* [NL., < Gr *μόνος*, single, + *γενεα*, origin see *genesis*.] In biol (a) Development of the ovum from a parent similar to itself—opposed to *metagenesis*. E van Beneden. (b) Generation of an individual from one parent which develops both male and female products, or ova and spermatozoa. A Thomson. (c) Descent of all living things from a single cell. Haeckel.

monogenes (mon-ō-jen'e-si), *n* [As *monogenesis*.] Same as *monogeny* or *monogeny*.
Encyc Brit

monogenetic (mon-ō-jē-net'ik), *a* [< *monogenesis*, after *genesis*.] 1 Of or pertaining to monogenesis.—2 Of or relating to monogenism.

The monogenetic theory, which believes in the original common origin of all mankind from one pair.
Science, VII 169

3. In geol, being the result of one genetic process applied by Dana to mountain-ranges.

The Appalachians, a range of many mountain ridges and valleys constitute one individual among mountains, because a result of one genetic process, or, in a word, *monogenetic*.
Dana, *Man of Geol* (3d ed) p 796.

monogenism (mō-nōj'e-nizm), *n* [< *monogeny* + *-ism*.] The descent of the whole human race from a single pair. Also called *monogeny*.—**Adamitic monogenism**, the descent of the human race from Adam and Eve, according to the Moslem account. Huxley, *Critiques and Addresses*, p 159.

monogenist (mō-nōj'e-nīst), *n* and *a* [< *monogeny* + *-ist*.] 1 One who maintains the doctrine of monogenism in any form.

To meet the inevitable question of "Whence the first organic matter?" the *Monogenist* is reduced to enumerate the existing elements into which the simplest living jelly or sarcodis is resolvable. Owen, *Anat* (1868), III 817.

2 One who believes in the doctrine of monogenism.

According to the *Monogenists*, all mankind have sprung from a single pair, whose multitudinous progeny spread themselves over the world.
Huxley, *Critiques and Addresses*, p 159.

II. *a* Of or pertaining to monogenism or monogenism as, a *monogenist* theory.

monogenistic (mon-ō-jē-nīst'ik), *a* [< *monogenist* + *-ic*.] Same as *monogenist*.

monogenous (mō-nōj'e-nus), *a* [< Gr *μόνος*, only-begotten, single, < *μόνος*, single, + *-γεννῆ*, < *γεννῆ*, produce see *-genesis*.] 1 Generated or generating by means of fission, germination, or sporulation, as modes of asexual reproduction.

Reproduction by fission, which, with that by budding and spore formation is included under the term *monogenous* asexual reproduction.

Claus, *Zoology* (trans) p 96

2 Of or pertaining to monogenism.—3 In math, having a single differential coefficient considered as a rule of generation—**Monogenous function**, a function, $X + Y$ of the imaginary variable $x + iy$, such that

$$\frac{\partial X}{\partial x} = \frac{\partial Y}{\partial y} \text{ and } \frac{\partial X}{\partial y} = -\frac{\partial Y}{\partial x}$$

It is usually defined as a function having a differential coefficient.

monogeny (mō-nōj'e-nī), *n* [< Gr *μόνος*, single, + *-γεννῆ*, < *γεννῆ*, produce see *-geny*.] 1.

Same as *monogony*, 1, or *monogenesis* — 2. Same as *monogenism*

monoglot (mon'ō-glōt), *a* [*LGr* μονόγλωττος, *monóglōttos*, speaking but one language, < *Gr* *μόνος*, single, + *γλῶττα*, Attic form of *γλῶσσα*, tongue, language] 1 Speaking or using only one language — 2 Written or published in only one language

monogoneutic (mon'ō-go-nu'tik), *a*. [*LGr* *μονός*, single, + *γονεῖν*, produce, < *γόνος*, offspring, generation] In *entom*, single-brooded, having only one brood during a year

monogonic (mon-o-gō'nik), *a* [*LGr* *μονογονία* + *-ic*] Of or pertaining to monogony same as *monogamous*, 1

Monogonopora (mon'ō-gō-nop'ō-rā), *n* *pl* [*NL*, neut *pl* of *monogonoporus* see *monogonoporous*] A division of dendroecious turbellarian worms, having the sexual opening single, whence the name It contains the land and fresh water planarians of the families *Planariidae* and *Geoplanidae* Opposed to *Digonopora*

monogonoporic (mon-o-gōn-o-pō'rik), *a* [*As* *monogonoporus* + *-ic*] Having a single sexual opening or generative pore, specifically, pertaining to the *Monogonopora*, or having their characters

monogonoporous (mon'ō-gō-nop'ō-rus), *a* [*L* *monogonoporus*, < *Gr* *μόνος*, single, + *γόνος*, generation, + *πόρος*, passage] Having a single genital pore, as a turbellarian, pertaining to the *Monogonopora* opposed to *digonoporous*

monogony (mō-nōg'ō-ni), *n* [*LGr* *μόνος*, single, + *γονα*, < *γενν*, produce see *-gony*] 1 Asexual reproduction, agamogenesis used by Haeckel in distinction from *amphigony* Monogony is exhibited in the lowest animals, in which there is no sex as in cases of reproduction by fission or gemination without conjugation The term is not applied to asexual modes of reproduction, as parthenogenesis, which occur in sexed animals Also *monogeny*, *monogenesy*

2 Same as *monogenesis*

Monomastiga (mon-ō-mas'ti-gā), *n* pl [NL, *<* (in neuter) pl of *Monomastix*] A division of flagellate infusorians having one flagellum, as the *Monadula*, etc. distinguished from *Dinmastiga*.

monomastigate (mon-ō-mas'ti-gāt), *a* [*<* Gr *μόνος*, single, + *μαστιγέ* (*μαστιγ-*), a whip, scourge] Having one flagellum, uniflagellate. said of the *Monomastiga*.

Monomastix (mon-ō-mas'tiks), *n*. [NL, *<* Gr *μόνος*, single, + *μαστιγέ* (*μαστιγ-*), a whip, scourge] A genus of uniflagellate infusorians proposed by Diesing in 1850, giving name to the *Monomastiga*.

monome (mon'ōm), *n* [*<* F *monôme* = Sp. Pg. It. *monomo*, *<* NL. **monomium*, for **mononimium*, *<* Gr *μόνος*, single, + *L. nom(en)*, name. Hence *monomial* (cf. *binomial*) Same as *monomial*.

Monomerat (mō-nom'e-rā), *n* pl [NL, *<* Gr *μονομερής*, consisting of one part, single see *monomeric*] A section of coleopterous insects proposed by Latreille for the reception of certain minute species. It is now known that his observations were imperfect, these insects having really several tarsal joints and pertaining to families which Latreille had included in other groups.

Monomerosomata (mō-nom'e-rō-sō-ma-ta), *n* pl [NL. see *monomerosomatous*] The acarids or mites as an order of tracheate arachnidans, the *Acarida* or *Acaridea*. In Leach's system there were 4 orders of *Arachnida* — *Dimerosomata*, spiders, *Polymerosomata*, scorpions, etc., *Monomerosomata*, mites, and *Podosomata*, the *Phryganomida*. Westwood interposed *Adelarthrosomata* between the second and the third of these.

monomerosomatous (mō-nom'e-rō-sōm'a-tus), *a*. [*<* Gr *μονομερής*, consisting of one part (see *monomeric*), + *σῶμα* (*σώματ-*), body] Having the body all in one piece or mass — that is, apparently unsegmented — as an acarid, or of pertaining to the *Monomerosomata*, or having their characters, as a mite, distinguished from *dimerosomatous*, *polymerosomatous*, etc.

monomerous (mō-nom'e-rus), *a*. [*<* Gr *μονομερής*, consisting of one part, *<* *μόνος*, single, + *μέρος*, part] 1. In *zool*, having the tarsi single-jointed, unarticulate, as a tarsus, specifically, of or pertaining to the *Monomera*. — 2. In *bot*, having but one member in each cycle (pistil, stamen, petal, or sepal). said of a flower. Compare *dimerous*, 2.

monometallic (mon'ō-me-tal'ik), *a* [*<* Gr *μόνος*, single, + *μέταλλον*, metal: see *metal*] Consisting of but one metal, specifically, comprising coins that consist of but one metal (or alloy), as gold or silver, as, a *monometallic* currency.
monometallism (mon-ō-met'al-izm), *n* [*<* *monometall(ic)* + *-ism*] The use of only one metal as a standard of value in the coinage of a country, also, the economic theory that advocates such a single standard. See *bimetallism*.
monometallist (mon-ō-met'al-ist), *n*. [*<* *monometall(ic)* + *-ist*] One who advocates the theory of monometallism opposed to *bimetallist*.
monometer (mō-nom'ō-ter), *a*, and *n* [*<* L. *monometer*, as a noun *monometron*, *<* Gr *μονομετρον*, consisting of one measure, *<* *μόνος*, single, + *μέτρον*, a measure see *meter*] 1. *a* In *pros*, consisting of a single measure.

II. *n* In *pros*, a meter consisting of a single measure.

monometric (mon-ō-met'rik), *a* [*<* Gr *μόνος*, single, + *μέτρον*, measure Cf. *monometer*] In crystal, same as *isometric*, 2.

monometrical (mon-ō-met'ri-kal), *a* [*<* *monometer* + *-ical*] Pertaining to or consisting of monometers, containing only one meter.
monomial (mō-nō-mi-al), *a* and *n* [*<* *monome* (NL. **monomium*) + *-al* Cf. *binomial*, *multinomial*, *polynomial*. See also *mononomial*] 1. *a* 1. In *alg*, consisting of only one term, and not of several added together. — 2. In *zool* and *bot*, same as *mononomial*. — **Monomial differentiant**. See *differentiant*.

II. *n* In *alg*, an expression or quantity consisting of a single term. See *binomial*. Also *monome*.

Monomorium (mon-ō-mō-ri-um), *n* [NL, *<* Gr *μόνος*, single, + *μοριον*, dim. of *μόρος*, a part, piece] A genus of *Formicidae*, having the metathorax unarmed, the mandibles narrow, and the antennae 11- or 12-jointed. It is wide spread, with many species among them the common little red ant, *M. pharaonis*. This well known domestic pest America owes

to Europe, though it has generally been considered of American origin, it is now almost cosmopolitan. It does no great damage, but is troublesome from its myriads, its habit of overrunning almost everything in the house that is eatable, and the great difficulty or impossibility of its extermination.

monomorphic (mon-ō-mor'fik), *a* [As *monomorph-ous* + *-ic*] 1. In *zool*, of one and the same (or essentially similar) type of structure, formed much alike, notably uniform in morphic character said of a number of animals collectively, or of the zoölogical group which they constitute as, birds are a highly *monomorphic* class of animals. — 2. In *entom*, having but one form, structure, or morphological character, identical or invariable in form throughout successive stages of development, monomorphous, homomorphous, ametabolic.

monomorphous (mon-ō-mor'fus), *a* [*<* Gr. *μόνος*, single, + *μορφή*, form] 1. Same as *monomorphic* in any sense. — 2. Of invariable form specifically applied to certain neuropterous insects which in their larval state are similar in form to the perfect insect, though wingless.

monomphalus (mō-nom'fa-lus), *n*; pl. *monomphali* (-li) [NL, *<* Gr *μόνος*, single, + *μφαλός*, navel] In *teratol*, a double monster, each person being nearly complete, but united with the other in a common umbilicus.

Monomyaria (mon'ō-mi-ā'ri-ā), *n* pl [NL, *<* Gr *μόνος*, single, + *μῦς*, muscle, + *-aria*] An order of bivalve mollusks with a single adductor muscle, or with one such muscle enlarged at the expense of another, subcentral in position and remote from the pallial margin. The order contains the scallops, oysters, pearl oysters, and related forms, and is nearly coincident with *Anaphonata*. See cut under *edonium*.

monomyarian (mon'ō-mi-ā'ri-an), *a* and *n* [*<* *Monomyaria* + *-an*] 1. *a* Having one adduc-

tor muscle, as an oyster, specifically, of or pertaining to the *Monomyaria*. Also *monomyary*.

II. *n* A monomyarian bivalve mollusk.
monomyary (mon-ō-mi-ā'ri), *a* and *n* [= F. *monomyarie*, *<* NL. *Monomyaria*] Same as *monomyarian*.

Mononeura (mon-ō-nu'ra), *n* pl [NL, *<* Gr *μονος*, single, + *νευρον*, nerve] Animals with only a ganglionic nervous system. *Rudolph*.

mononomial (mon-ō-nō-mi-al), *a* [*<* Gr *μόνος*, single, + *L. nom(en)*, name see *nominal* (cf. *monomial*)] In *zool* and *bot*, consisting of a single word or term applied to the name of an animal or a plant, opposed to *binomial* and *polynomial*. *Coues*, The Auk, l. 320. Also *monomial*.
mononuclear (mon-ō-nu'klē-ā), *a* [*<* Gr *μόνος*, single, + *L. nucleus*, nucleus see *nuclear*] Having a single nucleus, unicellular as, large *mononuclear* cells. *Haepp*, Bacteriological Investigations (trans.), p. 68.

Mononychinae (mon'ō-ni-kī'ne), *n* pl [NL, *<* *Monomya* (-onych-) + *-ina*] A subfamily of *Galgula*, typified by the genus *Monomya*. It contains heteropterous insects of flattened form, truncate in front, rounded behind, and rough on top of dull or dark color, and with the fore legs inept, fitted for clutching insect prey.

mononym (mon'ō-nim), *n* [*<* Gr *μονώνυμος*, having one name, *<* *μόνος*, single, + *ὄνομα*, *ὄνυμα*, a name see *onym*] A name consisting of a single term, a mononomial name in zoology. *Coues*, The Auk, l. 321.

mononymic (mon-ō-nim'ik), *a* [*<* *mononym* + *-ic*] Having but one name, named in one word, mononomial applied in zoology to a system of nomenclature in which the name of each species is a single word opposed to *dionymic* and *polynymic*.

In a *mononymic* system we should require as many separate names as there are objects to be named.

J. W. Dunning, *Entomol. Monthly Mag.*, VIII 274.

mononymization (mon-ō-nim-i-zā'shōn), *n*. [*<* *mononymize* + *-ation*] The substitution of a single word for several which had been used together as the name of something, as the employment of the name *ster* for a part of the brain usually called *iter a tertio ad quartum ventriculum*. [Rare]

The desired *mononymization* is best attained by simply dropping the superfluous genitive in the phrase "torus alii Herophilii".

Thick's Handbook of Med. Sciences, VIII 525, note.

mononymize (mon'ō-nim-īz), *v* t, pret and pp *mononymized*, ppr *mononymizing* [*<* *mononym* + *-ize*] To convert (a polynomial name) into a mononym.

Mononyx (mon'ō-niks), *n* [NL, *<* Gr *μόνος*, single, + *ὄνυξ*, a nail see *onyx*] In *entom* (a) The typical genus of *Mononychina*, founded by Laporte in 1837. *M. amplipennis* is a large, broad South American species, *M. stygicus* is found in the southern United States. (b) An unused genus of coleopterous insects. *Brulle*, 1838.

monobusian (mon-ō-b'us-i-an), *a* Same as *monobusianus*.

monobusianus (mon-ō-b'us-i-ān), *a* [*<* L. *gr. monobusios*, of single essence, *<* Gr *μόνος*, single, + *οὐσία*, essence, *<* Gr *ὄν* (*fem. oûsa*), ppn of *ὄναι*, be see *be*, *ens* (cf. *homobusianus*)] Having the same substance, consisting of the same matter used to describe the Sabellian confounding of God the Father and God the Son.

monoparesis (mon-ō-pai'e-sis), *n* [NL, *<* Gr *μόνος*, single, + *παρεσις*, a weakening, paralysis see *parisis*] In *pathol*, the paresis of a single part of the body, as of one limb.

monopathic (mon-ō-path'ik), *a* [*<* *monopathy* + *-ic*] In *pathol*, involving the disorder of only one organ or function said of disease.

monopathy (mō-nop'a-thi), *n* [*<* L. *monopatia*, suffering in one part of the body only, *<* Gr *μόνος*, single, + *πάθος*, suffering] 1. Solitary suffering or sensibility.

Every one calculated his nativity, and sentenced his own future fate, by crying at his birth, not coming only from the body a *monopathy* of soul suffering by change of its warm quarters, but, according to some, from sympathy with the divine soul, that knoweth itself for a time banished from the Father of Spirits.

Whitlock, *Manners of the English* (1654), p. 32. (*Latham*)

2. In *pathol*, a disease or affection in which only one organ or function is disordered.

monopersonal (mon-ō-per'son-al), *a* [*<* Gr *μόνος*, single + *L. persona*, *person* see *personal*] In *theol*, having but one person or one mode of existence.

monopetalous (mon-ō-pet'a-lus), *a* [= F. *monopétale* = Sp. *monopétalo* = Pg. It. *monopetalo*, *<* Gr *μόνος*, single, + *πέταλον*, leaf (pet-

monophyletic (mon'ō-fī-let'ik), *a* [< (Gr. *μόνος*, single, + *φυλή*, a tribe, > *φύλαξ*, a tribesman, *φύλαξ*, belonging to a tribesman see *phylum*)] Of or pertaining to a single phylum said of a group of any grade in zoology, with reference to the origin of all the members of such group from a common ancestor opposed to *polyphyletic*. The *monophyletic* hypothesis, in its logical application to the animal kingdom derives all animals from a single proto type. It is equivalent to the *monogenetic* hypothesis in phylogeny

My *gastrea* theory, on which I base the *monophyletic* genealogy of the animal kingdom

Haeckel, *Evol of Man* (trans), I 247

monophylitic (mon'ō-fī-lit'ik), *a* An erroneous form of *monophyletic*

Polyphylitic origin, so far from being improbable, is as likely an occurrence as *monophylitic* origin

Sollas, *Encyc Brit*, XXII 426.

monophylline (mon'ō-fīl'in), *a*. [As *monophyllous* + *-ine*] Same as *monophyllous*

monophyllous (mon'ō-fīl'us), *a* [= F *monophylle* = Pg *monophyllo* = It *monofilo*, < Gr. *μόνος*, single, having but one leaf, < *μόνος*, single, + *φύλλον*, leaf] In *bot*, having but one leaf, formed of one leaf

Monophyllus (mon'ō-fīl'us), *n* [NL, < Gr. *μόνος*, single, having but one leaf see *monophyllous*] A genus of leaf-nosed bats of the family *Phyllostomidae*, founded by Leach in 1822. *M redmani* is a West Indian species, about 12 inches in extent, and of a grayish-brown color.

monophyodont (mon'ō-fī'ō-dont), *a* and *n*. [< Gr. *μόνος*, of simple nature, single, as teeth (< *μόνος*, single, + *φύρι*, produce), + *ὄδους* (ὄδοντ-) = E *tooth*] 1. *a*. Having only one set of teeth opposed to *diphyodont* and *polyphyodont*.

II. *n* An animal having only one set of teeth **Monophyodonta** (mon'ō-fī'ō-don'tā), *n pl* [NL see *monophyodont*] A division of mammals containing those which are monophyodont, as the cetaceans *Sir R. Owen*

Monophysite (mon'ōf'is-it), *n*, and *a*. [= F *monophysite*, < LGr. *μονοφυσίτης*, one who held that Christ has but one nature, < Gr. *μόνος*, single, + *φύσις*, nature see *physic*.] 1. *n* One who holds that there is but one nature in Christ, more specifically, one of a sect which teaches that there is but one commingled or compound nature in Christ, partly divine and partly human, in contradistinction to the orthodox doctrine that by the incarnation two complete and perfect natures, the divine and the human, are united without confusion or mutation in the one person of Christ. Among Monophysites in the wider sense are included the Eutychians and Monothelites. The sect of Eutychians was founded by Eutyches, who was condemned at the Council of Chalcedon A D 451. They taught that there is but one nature in Christ, the divine. The Monophysites properly so called hold that the divine and human natures in Christ are combined into one composite nature. The first leaders of the Monophysites, and founders of the present Monophysite or Coptic Church of Egypt, were Dioscorus condemned at Chalcedon (died A D 454), and Timothy Ælurus ('Cat'), made patriarch A D 457. In later times their most important leader was Severus, about A D 520, whose followers were called *Severians*, *Corruptors*, or *Phthartolabes*, while those of an opposite Monophysite sect were known as *Johannans*, *Aphthartodocetes*, and *Phantasmats*. In the sixth century the Monophysites spread widely in Syria, and were named *Jacobites*, from Jacob Baradaeus, Bishop of Edessa, 541-78. At various times the Monophysites divided into a great number of sects, known by more than thirty different titles. These represented different shades of original Eutychianism and Monophysitism and attempts at approach to orthodoxy. The most subtle form of Monophysitism is Monothelitism (which see). Monophysitism is at the opposite pole of doctrine to Nestorianism, the orthodox doctrine as to the nature of Christ lying midway between the two. As distinguished from the Monophysites, the orthodox are called *Diphysites* and *Melchites*. At the present day the two great bodies of Monophysites are the Copts and the Syrian Jacobites. The Armenian Church is also often regarded as Monophysite or Eutychian, and the Maronites before their subordination to the Roman Church were Monothelites. See *Accephals* (b), *Agnoetes*, *Theopaschites*, *Trithelists*

II. *a* Same as *Monophysitism*

Monophysitism (mon'ō-fī-sit'iz-m), *a* [< *Monophysite* + *-ism*] Of or pertaining to the Monophysites or their doctrines, of the nature of the doctrines of the Monophysites

Monophysitism (mō-nōf'is-sī-tizm), *n* [< *Monophysite* + *-ism*] The doctrines of the Monophysites. Compare *diphysitism*

Eutychianism revived in the form of *Monophysitism*, or the doctrine that Christ had but one composite nature. It makes the humanity of Christ a mere accident of the immutable divine nature.

monoplacid (mon'ō-plas-id), *a* [< Gr. *μόνος*, single, + *πλάσις*, a flat cake see *placenta*] Having but one madreporic plate, as a starfish distinguished from *polyplacid*

monoplacula (mon'ō-plak'ū-lā), *n*; *pl monoplacula* (-lā) [NL, < Gr. *μόνος*, single, + NL *placula*, *q v*] A single-layered germ, a placula of one layer of cells, formed by vertical fission of the germ opposed to *diploplacula* Hyatt, *Proc Bost Soc Nat Hist*, 1884, p 80

monoplacular (mon'ō-plak'ū-lār), *a* [< *monoplacula* + *-ar*] Single-layered, as a germ, having the characteristics of a monoplacula.

monoplaculate (mon'ō-plak'ū-lāt), *a* [< *monoplacula* + *-ate*] Same as *monoplacular* A Hyatt

monoplast (mon'ō-plast), *n* [< Gr. *μόνος*, single, + *πλάστος*, formed, molded, < *πλάσσειν*, form, mold] An organism consisting of a single cell; a simple or homogeneous form-element

monoplastic (mon'ō-plas'tik), *a*. [< *monoplast* + *-ic*] Of or pertaining to a monoplast

monoplegia (mon'ō-plē'jī-ā), *n*. [NL, < Gr. *μόνος*, single, + *πληγή*, stroke] In *pathol*, paralysis limited to a single part, as of one arm or leg. Compare *hemiplegia*, *paraplegia*

monopneurobranch (mon'ō-plē-rō-brangk), *a* and *n* [< Gr. *μόνος*, single, + *πλευρά*, side, + *βραγχία*, gills] 1. *a* Having gills on only one side, or of pertaining to the *Monopneurobranchiata*

II. *n* A member of the *Monopneurobranchiata* **Monopneurobranchia** (mon'ō-plē-rō-brang'ki-ā), *n pl* [NL see *monopneurobranch*] Same as *Monopneurobranchiata*.

monopneurobranchian (mon'ō-plē-rō-brang'ki-an), *a*, and *n* [< *monopneurobranch* + *-ian*] Same as *monopneurobranch*

Monopneurobranchiata (mon'ō-plē-rō-brang'ki-ā'tā), *n pl* [NL see *monopneurobranch*] A suborder of opisthobranchiate gastropods having plumose gills usually on one side, the right, under the edge of the mantle. This name was proposed by De Blainville in 1825 as that of the third order of his *Paracephalophora monacea*, divided into 4 families, as the sea hares and their allies. It is synonymous with *Tectibranchiata* of Cuvier. The group is also called *Pomatiobranchiata*. Also *Monopneurobranchia* J E Gray, 1821

monopneurobranchiate (mon'ō-plē-rō-brang'ki-āt), *a*, and *n* [< *monopneurobranch* + *-ate*] Same as *monopneurobranch*

Monopneumona (mon-op-nū'mō-nā), *n pl* [NL, neut pl see *Monopneumones*] A division of *Dipneusta* or *Dipnoi*, containing those dipnoans which are single-lunged distinguished from *Dipneumona*. The only existing representative is *Ceratodus*

Monopneumones (mon-op-nū'mō-nēz), *n pl* [NL, < Gr. *μόνος*, single, + *πνεύμων*, lung, usually pl *πνεύμονες*, the lungs] Same as *Monopneumona*

monopneumonian (mon'op-nū-mō-nī-an), *a* and *n* [As *Monopneumona* + *-an*] 1. *a* Having only one lung specifically applied to the *Monopneumona*

II. *n* A lung-fish, as *Ceratodus*

monopneumonous (mon-op-nū'mō-nus), *a* [As *Monopneumones* + *-ous*] Having only one lung; of or pertaining to the *Monopneumona*, *Monopneumones*, or *Monopneumonia*

Monopnea (mō-nop'no-ā), *n pl* [NL, < Gr. *μόνος*, single, + *πνέω*, breathing, < *πνέω*, breathe] In Owen's classification, a "subclass of *Reptilia*," containing all reptiles which breathe in one way only—that is, by lungs distinguished from *Dipnoa* or *Branchiobola*, which breathe in two ways—that is, either by gills first and lungs afterward in the case of the same individual, or some of them by gills and others by lungs. In this scheme, not easy to define satisfactorily, Prof Owen makes his "class *Reptilia*" cover not only *Reptilia* in the usual sense, but also *Amphibia* or *Batrachia*. His *Dipnoa* are then continuous with *Amphibia* proper. He divides *Monopnea* into the orders *Pterosauria*, *Dinosauria*, *Crocodylia*, *Chelonata*, *Lacertilia*, *Ophidia*, *Anomodontia*, *Sauriapterygia*, and *Ichthyopterygia*. *Comp Anat*, Vert (1868), III 550

monopoly (mō-nop'ō-lī), *n*, *pl* *monopolies* (-līz) [= *F monopole* = Sp Pg It *monopolio*, *< L monopolium*, *< Gr μονοπώλιον*, a right of exclusive sale, *μονωπωλία*, exclusive sale, monopoly, *< μόνος*, sole, + *πωλειν*, barter, sale] 1 An exclusive privilege to carry on a traffic.

Monopolies are much the same offence in other branches of trade that engrossing is in provisions, being a license or privilege allowed by the king for the sole buying and selling, making, working, or using of any thing whatsoever, whereby the subject in general is restrained from that liberty of manufacturing or trading which he had before.

Blackstone, Com (ed Waite), IV. 159.

2 Specifically, in *Eng. constitutional hist*, and hence sometimes in *Amer. law*, such an exclusive privilege when granted by the crown or state to an individual, association, or corporation, for the sake of the pecuniary advantage of its exclusiveness. A privilege not granted by the state, but secured by buying up the article, is termed by the English law *engrossing*. The legal objection to a monopoly, in this sense of the word, is that it can be secured only by forbidding all other citizens except the favored grantee to exercise a common law right. Exclusive privileges granted by the state to a limited number of persons for the sake of enabling the state the better to regulate the traffic for the protection of the rest of the community, as in case of banking franchises, liquor traffic, etc., are not deemed monopolies, although the same privileges would be, if conferred on a single or a very few grantees, for the sake of the pecuniary benefit to them. So the exclusive privileges conferred on inventors and authors, by the patent and copy right laws, for the sake of the encouragement of the arts and literature, and extending only to articles originally devised under that encouragement, are not deemed monopoly.

lies Both these classes of grants have, however, been condemned by some as partaking of the character of monopoly.

If any man, out of his own wit, industry, or endeavour, find out anything beneficial to the Commonwealth, or bring out any new invention which every subject of this kingdom may use yet, in regard of his pains and travel there in, her Majesty perhaps is pleased to grant him a privilege to use the same only, by himself or his deputies, for a certain time. This is one kind of *Monopoly*. Sometimes there is a glut of things, when they be in excessive quantity, as perhaps of corn, and perhaps her Majesty gives license of transportation to one man. This is another kind of *Monopoly*. Sometimes there is a scarcity or a small quantity, and the like is granted also.

Dacon, in E. A. Abbott's Account of his Life and Works.

I will have no private *monopolies*, to enrich one man, and beggar a multitude.

Burton, Anat. of Mel, To the Reader, p. 68.

He thinks he can never trade to his advantage unless he can have the *monopoly* of everything he values. South.

3. In *polite econ*, and as used in a general sense in law, such an exclusive privilege to carry on a traffic, or deal in or control a given class of articles, as will enable the holder to raise prices materially above what they would be if the traffic or dealing were free to citizens generally. In this sense, that exclusive control of a particular kind of product which results from the legitimate ownership of the only land from which it can be obtained, as in the case of some mineral waters, or earths, or ores is sometimes spoken of as a *natural monopoly*, in contrast to the artificial monopolies created by state grant. See *virtual monopoly*, below.

4. That which is the subject of a monopoly as, in Bengal opium is a *monopoly* — 5. The possession or assumption of anything to the exclusion of other possessors thus, a man is popularly said to have a *monopoly* of any business of which he has acquired complete control.

Johnson, who, by studying Horace, had been acquainted with the rules yet seemed to envy to posterity that knowledge, and to make a *monopoly* of his learning.

Dryden, tr of Juvenal, Ded.

Caleb hath no *monopoly* to court the sennecotias.

Lowell, Higlow Papers, 1st ser., II.

6. Loosely, a company or corporation which enjoys a monopoly — **Monopoly Act**, an English statute of 1825 (21 Jas. I. c. 5), declaring all monopolies for the manufacture, sale, or use of anything to be void, excepting to inventors their patent rights. Also known as the *Statute of Monopolies*. — **Virtual monopoly**, a term in constitutional law and the history of legislation (the appropriate applications of which have been much contested) used to characterize a business which though not declared by law to be a monopoly or exclusive franchise protected as such, as by a patent or an exclusive charter, is yet so related to the great channels and currents of commerce that the allowing of it to enjoy the same protection as other private property and business secures to it indirectly exclusive advantages substantially equivalent to a legal monopoly. Thus the great grain elevators of modern commerce, although erected as private property on private lands, if by their situation they have exclusive advantages for the transfer of grain from vessels at the wharf to the railroad terminus of a trunk line, are said to constitute a *virtual monopoly* because, if not subjected to a legislative power to restrict their charges such as other private property and business are not subjected to, they might be conducted in a manner oppressive to commerce.

monopolyloguer (mon-ō-pol'i-log), *n* [*< Gr μόνος*, single, + *λόγος*, much talking, *< λαλέω*, many, much, + *λέγω*, speak] An entertainer in which a single actor sustains many characters. Brande.

Monorchides, as they are called, have been known to be prolific. A. S. Taylor, Medical Jurisprudence, p. 726.

monorchism (mō-nōr'kizm), *n* [As *monorchis* + *-ism*] The presence of only one testicle.

monorganic (mō-nōr-gan'ik), *a* [*< Gr μόνος*, single, + *ὄργανον*, organ, see *organic*] Pertaining to or affecting one organ or set of organs.

Monorhina (mon-ō-rī'nā), *n* *pl* [NL, see *monorhine*] A primary division of the *Vertebrata*, or other major group of vertebrates, represented by the *Marsipobranchia* (*Cybstomus* or roundmouths), the lampreys and hags (*Hyperotreta* and *Hyperoartia*), in which the nasal passage is single distinguished from all other cranial vertebrates, or *Amphirhina*. Also, more correctly, *Monorhina*.

monorhinal (mon'ō-rī-nal), *a* [*< monorhine* + *-al*] Having the nostril single, monorhine. **monorhine** (mon'ō-rīn), *a* and *n* [*< Gr μόνος*, single, + *ῥίς* (ῥιν-), the nose] 1. *a* Having but one nasal passage, single-nostriled, specifically applied to the *Monorhina*.

II. n. A monorhinal vertebrate, as a lamprey or a hag

Also spelled *monorrhine*.

monorime, monorhyme (mon'ō-rīm), *n* [= *F monorime*, < Gr *μόνος*, single, + *E rime*²] A composition in verse in which all the lines end with the same rime

Monorrhina, monorrhine. More correct forms of *Monorhina, monorhine*

monoschemic (mon-ō-skō'mik), *a* [*< Gr. μόνος*, single, + *σχῆμα*, form] In *anc pros*, consisting of one form of foot throughout, containing spondees only or dactyls only noting a variety of the dactylic hexameter. A hexameter said to contain only dactyls necessarily lacks the last syllable of the last dactyl—that is, contains five dactyls and a trochee. See *isochronal*

monosemic (mon-ō-sē'mik), *a* [*< Gr. μόνος*, having but one signification, < *μόνος*, single, + *σημα*, a sign, mark, σημειον, a sign, mark, unit of time, mora] In *anc pros*, consisting in or equal to a single semeion (mora or unit of time), equivalent to or constituting an ordinary or normal short, monochronous as, a monosemic arsis, a monosemic pause. See *di-remu, trisemu*

monosepalous (mon-ō-sep'a-lus), *a* [= *F monosépale*, < (*Gr. μόνος*, single, + *NL sepalum*, sepal)] In *bot*, having the sepals united by their edges more properly *gamosepalous*

monosiphonous (mon-ō-sī'fon-us), *a* [*< Gr. μόνος*, single, + *σῆψον*, siphon see *siphon*] Having a single siphon, not polysiphonous applied in botany to certain of the higher algae (*Floridæ*) in which the siphons or pericentral tubes are wanting. See *siphon*

monosist (mō-nō'sis), *n* [*< Gr. μόνος*, solitariness, separation, < *μονοῖν*, make single or solitary, < *μόνος*, single see *monad*] In *bot*, the isolation of an organ from the rest. *Cooke, Manual*

Monosomata (mon-ō-sō'ma-tā), *n pl* [*NL, neut pl of monosomatus see monosomatous*] An order of *Rhizopoda*, containing simple single-celled or unicellular forms, naked or encapsulated, such as the families *Protelæ* and *Archeletæ*. They are the ordinary normal amœbiform protozoans

monosomatous (mon-ō-som'a-tus), *a* [*< NL monosomatus, < (Gr. μόνος*, single, + *σῶμα* (sōma), body.] Having a single body—that is, cell, unicellular, as a rhizopod

monospasm (mon'ō-spazm), *n* [*< Gr. μόνος*, single, + *σπασμός*, a spasm] In *pathol*, spasm of a particular part, as a limb or portion of a limb

monosperm (mon'ō-spērm), *n* [= *F monosperme* = *Sp monospermato*, < (*Gr. μόνος*, single, + *σπέρμα*, seed see *sperm*)] A plant that has only one seed

monospermal (mon-ō-spēr'mal), *a* [*< monosperm + -al*] Same as *monospermaous*

monospermous (mon-ō-spēr'mus), *a* [*< monosperm + -ous*] In *bot*, having one seed only

monospherical (mon-ō-sfēr'ī-kal), *a* [*< Gr. μόνος*, single, + *σφαῖρα*, sphere see *spherical*] Consisting of or having a single sphere

monospondylic (mon'ō-spon-dil'ik), *a* [*< Gr. μόνος*, single, + *σπόνδυλος*, a joint of the backbone] Having a single centrum, as a vertebra, without intercentra, as a vertebral column; not diplospondylic or embolomerous

monosporous (mon'ō-spōr'd), *a* [*< Gr. μόνος*, single, + *σπόρος*, a seed, + *-ed*²] Same as *monosporous*

monosporous (mon'ō-spōr-us), *a* [*< Gr. μόνος*, single, + *σπορος*, a seed] In *mycology*, having but a single spore, as the threads of *Garia intricata* or the ascus of *Pertusaria communis*

monostachous (mō-nos'tā-kus), *a* [*< Gr. μόνος*, single, + *σῆμα*, an ear of corn, a spike] In *bot*, having a single spike

Monostega (mō-nos'tē-gē), *n pl* [*NL, neut pl of *monostegus see monostegous*] A division of foraminifera

monostegous (mō-nos'tē-gus), *a* [*< NL *monostegus, < (Gr. μόνος*, single, + *στέγος*, for τέγος, a roof] Having a single covering, specifically, of or pertaining to the *Monostega*

monostich (mon'ō-stik), *n* [= *F monostique* = *Sp monostico*, *monostiquo* = *It monostico*, < *LL monostichum, monostichum*, < (*Gr. μόνοςτιχος*, consisting of but one verse, neut μόνοςτιχον, a single verse, < *μόνος*, single, + *στιχος*, a line, verse)] A single or isolated verse, also, an epigram or a poem consisting of but one verse.

monostichous (mō-nos'ti-kus), *a*. [*< Gr. μόνος*, single, + *στιχος*, a line. Cf. *monostich*.] Arranged in one vertical row, rank, or series, as the flowers in the spike of some species of *Spiranthes*, uniserial opposed to *distichous*.

monostigmatous (mon-ō-stig'ma-tus), *a* [*< Gr. μόνος*, single, + *στίγμα*, point, stigma see *stigma*] In *bot*, having only one stigma

Monostomata (mon-ō-stō'ma-tā), *n pl* [*NL, neut pl of monostomatus see monostomatous*] 1. A suborder of aculephs, or discophoran *Hydrozoa* same as *Monostomea*—2 A prime series or division of *Metazoa*, including all metazoic animals excepting the sponges or *Polystomata* *Huxley, Quart Jour Micros. Sci*, 1875

monostomatous (mon-ō-stō'ma-tus), *a*. [*< NL monostomatus (cf. Gr. μόνοςτομος), < Gr. μόνος*, single, + *στόμα*, the mouth] Having a single mouth, pore, or stoma, of or pertaining to the *Monostomata* opposed to *polystomatous*

Monostomea (mon-ō-stō'mē-ā), *n pl* [*NL, < Gr. μόνοςτομος*, having a single mouth. see *monostomatous*] An order of aculephs, or discophoran *Hydrozoa*, with single central mouth and one polypite. They are free oceanic jelly fishes, some of them of enormous size, the disk 6 or 7 feet in diameter, and the tentacles trailing 50 feet. The leading forms are *Pelagia*, *Cyanea*, and *Aurelia* each of them type of a family. Also *Monostoma, Monostome, Monostomata*, and *Pelagada*

monostomean (mon-ō-stō'mē-an), *a*. and *n* [*< Monostoma + -an*] I. *a*. Pertaining to the *Monostomea*, or having their characters

II. *n*. A jelly-fish of the order *Monostomacea*

Monostomidae (mon-ō-stō'mī-dē), *n pl* [*NL, < Monostomum + -idae*] A family of digenous parasitic worms of the order *Trematoda*, represented by the genus *Monostomum*

Monostomum (mō-nos'tō-mum), *n* [*NL, < Gr. μόνοςτομος*, having a single mouth. see *monostomatous*] A genus of flukes or trematoid worms, typical of the family *Monostomidae*, of an oval-elongated form, with only one sucker which surrounds the mouth, a strong pharynx, and the sexual openings near the anterior end of the body. Several species of these parasites are named, as *M. mutabile*, which is viviparous and infests birds, *M. bipartitum*, from the gills of fishes, *M. lentus*, found in the crystalline lens of the human eye. Also called *Monostoma*. See cuts under *cercaria*

monostrophe (mō-nos'trō-fē), *n* [*< LL monostrophus, < Gr. μόνοςτροφος*, consisting of a single kind of strophe, < *μόνος*, single, + *στροφή*, a strophe. see *strophe*] In *pros*, a poem in which all the strophes or stanzas are of the same metrical form

monostrophic (mon-ō-strof'ik), *a*. [*< Gr. μόνοςτροφικός, < μόνοςτροφος*, consisting of a single kind of strophe see *monostrophe*] In *pros*, consisting of a succession of systems or strophes all of which are of the same metrical form, of or pertaining to such a succession of systems. Monostrophic composition is a subdivision of antistrophic composition, and is opposed to composition by pericopes. Most English poems which are composed in strophes or stanzas are monostrophic (as, for instance, our ordinary ballads, short and long meter hymns, etc.)—composition by pericopes being limited to imitations of the Greek dramatists and lyric poets. See *systematic*

monostyle¹ (mon'ō-stīl), *a* [*< Gr. μόνος*, single, + *E style*¹] In *arch*, having the same style of architecture throughout. *Oxford Glossary*

monostyle² (mon'ō-stīl), *a* [*< Gr. μόνος*, single, + *στυλος*, pillar see *style*²] In *arch*, having or consisting of a single shaft applied to medieval pillars, in contradistinction to *polystyle*

monostylous (mon'ō-stī-lus), *a* [*As monostyle + -ous*] In *bot*, having only one style

monosy (mon'ō-sī), *a* [*NL (Morren, 1852), < Gr. μόνος*, singleness, < *μονοῖν*, make single, < *μόνος*, single see *monad*] In *bot*, an abnormal condition in which organs that are ordinarily entire, or more or less united, have become split or disunited, as when a normally entire leaf becomes lobed or partite. It includes two kinds of abnormal isolation—(a) when the separation is congenital (*adamy*), and (b) when it is the result of the separation of parts previously joined (*disamy*)

monosyllabic (mon'ō-sī-lab'ik), *a* [= *F monosyllabique* = *Sp monosilábico* = *Pg monosyllabico* (cf. *Sp monosilabo* = *It monosilabo*, adj.), < *L monosyllabus*, < *Gr. μονοσλλαβος*, of one syllable, monosyllabic see *monosyllable*] 1. Consisting of one syllable as, a monosyllabic word—2 Consisting of words of one syllable as, a monosyllabic verse—**Monosyllabic echo**, an echo of such kind that separate monosyllables are distinctly heard. This requires that the reflecting surface be about 112 feet from the observer. See *echo*

monosyllabically (mon'ō-sī-lab'ī-kal-ī), *adv*. In monosyllables; with the use of monosyllables.

monosyllabism (mon-ō-sī-lab'iz-m), *n* [= *F monosyllabisme*; as *monosyllab(ie) + -ism*.] 1. A predominance of monosyllables, the exclusive use of monosyllables as, the monosyllabism of Chinese—2 The state of being monosyllabic, the character of a monosyllable

monosyllable (mon'ō-sī-lab'l), *n* [*For *monosyllabe (as syllable for *syllabe) = F monosyllabe = Sp monosilabo = Pg monosyllabo = It monosillaba, a monosyllable, < L monosyllabus, < Gr. μονοσλλαβος, of one syllable, < μόνος*, single, + *σλλαβη*, syllable see *syllable*] A word of one syllable

She dealt in nothing but in monosyllables, as if to have spoken words of greater length would have cracked her voice. *Dekker, Lanthorne and Candle-Light*, 1

monosyllable (mon'ō-sī-lab'l), *v t*, pret. and pp *monosyllabled*, ppr *monosyllabing* [*< monosyllable, n*] To express in or reduce to one syllable. [*Itare*]

Nine tallors, if rightly spelled,
Into one man are monosyllabled. *Cleveland*

monosyllogism (mon-ō-sī-lab'iz-m), *n* [*< Gr. μόνος*, single, + *E syllogism*] A syllogism viewed as an isolated and independent whole

monosyllogistic (mon-ō-sī-lab'iz-m'ik), *a* [*< monosyllog-ism + -istic*.] Consisting of a single syllogism—**Monosyllogistic proof**. See *proof*

monosymmetric (mon'ō-sī-met'rik), *a* [*< Gr. μόνος*, single, + *E symmetry + -ic*] In *crystal*, noting that system of crystallization in which there is but one plane of symmetry, the clinodiagonal plane same as *monoclinic*

monosymmetrical (mon'ō-sī-met'ri-kal), *a* [*< Gr. μόνος*, single, + *E symmetric + -al*] In *bot*, applied to flowers or other structures which can be bisected into similar halves in only one plane. synonymous with *zygomorphous*

monota (mō-nō'tā), *n*, pl *monotæ* (-tē). [*NL, < Gr. μόνωτος* for *μονωατος*, one-eared, < *μόνος*, single, + *ὠς* (ōs), ear, handle see *car*¹] A one-handed vase

Amphora with small monota beside it. *B V Head, Historia Numorum*, p 521

monotelephone (mon-ō-tel'e-fōn), *n* [*< Gr. μόνος*, single, + *E telephone*] A telephone adapted for transmitting or receiving a sound of definite pitch or frequency of vibration

monotelephonic (mon-ō-tel'e-fōn'ik), *a* [*As monotelephone + -ic*] Adapted for transmitting one note or sound of definite pitch

monotessaron (mon-ō-tēs'a-rōn), *n*, pl *monotessara* (-rā). [*NL, < Gr. μόνος*, single, + *τέσσαρες*, four] A Scriptural narrative prepared from a collation of the four evangelists, a harmony of the four gospels, a diatessaron

monothalamian (mon-ō-thal'a-mi-an), *a* and *n* [*< monothalam-ous + -ian*] Same as *monothalamian*

Monothalamia (mon'ō-thā-lā'mī-ā), *n pl* [*NL, < Gr. μόνος*, single, + *θάλαμος*, chamber see *thalamus*] 1 A division of reticulate amœbiform protozoans, or *Foraminifera*, containing those whose test is single-chambered opposed to *Polythalamia*. The term does not indicate any natural division of the foraminifera. See cut under *Foraminifera*—2. In *conch*, a division of *Cephalopoda*, containing those cephalopods whose shell is single-chambered, as the genus *Argonauta*. *Lamarck*

monothalamian (mon'ō-thā-lā'mī-an), *a* and *n* [*< Monothalamia + -an*] I. *a*. Single-chambered, unilocular, having but one compartment especially applied to *Foraminifera* of this character, in distinction from *polythalamian*. See cut under *Foraminifera*

II. *n*. An organism whose test or shell is unilocular or monothalamous said of cephalopods, and especially of foraminifera

Also *monothalamian*

monothalamous (mon-ō-thal'a-mus), *a* [*< Gr. μόνος*, single, + *θάλαμος*, chamber see *thalamus*] 1. In *bot*, single-chambered; having but one compartment, unilocular applied to galls upon plants, and also rarely (as by *Tuckerman*) to the apothecia of certain lichens.—2 In *entom*, having but one cavity applied to the nests or galls of insects when they have only a single chamber

monothecal (mon-ō-thē'kal), *a* [*< Gr. μόνος*, single, + *θηκη*, case, receptacle. see *theca*.] In *bot*, having only one locule or cell of the pericarp

monothelism (mon'ō-thē-lizm), *n*. [= *F monothélisme* = *Sp. monotelismo* = *Pg monothelismo* =

It. *monoteismo*, < Gr. *μόνος*, single, + *θεός*, God; see *theism*.] The doctrine or belief that there is but one God.

monothelism (mon'-ō-thē-ist), *n* [= F *monothéisme* = Sp. *monoteísmo*, < Gr. *μόνος*, single, + *θεός*, God; see *theist*.] One who believes that there is but one God.

monothelistic (mon'-ō-thē-ist-ik), *a*. [*monothelism* + *-ic*.] Of or pertaining to monothelism, of the nature of monothelism, believing in monothelism.

Monotheletic (mon'-ō-the-let-ik), *a* Same as *Monothelistic*.

Monothelism (mon'-ō-thel'-e-izm), *n* Same as *Monothelistic*.

Closely connected with Monophysitism was *Monothelism*, or the doctrine that Christ has but one will, as he has but one person. *Schaff*, *Christ and Christianity*, p. 62.

monothellous (mon'-ō-thē-l-us), *a* [*monothellus*, < Gr. *μόνος*, single, + *θηλυς*, female.] In *zoöl*, polyandrous noting species in which several males serve to fecundate a single female.

Monothelism (mō-noth'-ē-izm), *n*. [= F *monothéisme* = Sp. *monoteísmo*, as *monothel(ite)* + *-ism*.] Same as *Monothelistic*.

Monothelism was the simple and natural consequence of Monophysitism, and originated from the endeavors which the State Church made in the seventh century to conciliate the Monophysites. *Schaff*, *Herzog*, *Encyc*.

Monothelite (mō-noth'-ē-lit), *n* [= F *monothélite* = Sp. It. *monotelita*, < L.L. *Monothelita*, < L.Gr. *μονοθηλίτης*, the sect of the Monothelites (cf. *μονοθεῖς*, of one will), < Gr. *μόνος*, single, + *θέλειν*, will, > *θελητής*, one who wills.] One who holds that Christ has but one will, the divine, specifically, one of a heretical sect or party in the Eastern Empire in the seventh century, which held that in Christ there are but one will (the divine will absorbing the human) and one operation or energy (*ἐνέργεια*).

The Church hath of old condemned *Monothelites* as heretics, for holding that Christ had but one will. *Hooker*, *Ecclies Polity*, v. 48.

The *Monothelites*, a sect who adopted in a modified form the views of the Monophysites, were condemned by the Sixth General Council in 680. Their opinions took root among the Maronites, a people of Lebanon, who about the end of the seventh century received the name of *Maronites*, from Maro their first bishop. They afterwards abjured the Monothelite heresy, and were admitted into communion with Rome in 1182.

Isaac Taylor, *The Alphabet*, I. 202.

Monothelitic (mon'-ō-thē-lit-ik), *a* [Also *Monothelitic*, < *Monothelite* + *-ic*.] Pertaining or akin to the Monothelites or their doctrine.

Monothelism (mō-noth'-ē-l-izm), *n* [= F *monothéisme*, as *Monothelite* + *-ism*.] The doctrine that in the person of Christ there are but one will and one energy or operation; opposed to the orthodox doctrine (dyothelism) that since the incarnation Christ has two distinct wills, the divine and the human, and two distinct but harmonious operations. The Monothelites argued that his will must be one, will being attached to personality. The orthodox urged that there must be two wills in him as otherwise either the divine or the human nature would be imperfect, and cited the texts Mat. xxvi. 42, Luk. xxi. 42, John v. 30, vi. 38. See *Monothelite*. Also *Monothelism*, *Monothelism*.

monothetic (mon'-ō-thet-ik), *a* [*monothetic*, < Gr. *μόνος*, single, + *θετικός*, verbal adj. of *τίθημι*, put; see *thesis*.] In *philos.*, positing or supposing a single essential element.

monotint (mon'-ō-tint), *n* [*monotint*, < Gr. *μόνος*, single, + *εἶδος*, kind.] Drawing, painting, printing, etc., in a single tint. Compare *monochrome*.

The characters are mere studies in monotint. *Contemporary Rev.*, L. 405.

monotocus (mō-not'-ō-kus), *a* [*monotocus*, < Gr. *μόνος*, single, + *τίκτειν*, *τεκεῖν*, bear (> *τόκος*, birth).] 1. In *zoöl*, having only one at a birth, uniparous, as the human species usually is; laying but one egg before incubating, as sundry birds.—2. In *bot.*, bearing progeny (fruiting) only once, as in annuals or biennials, same as *monocarpous*. Also *monotokous*.

Monotoma (mō-not'-ō-mā), *n* [NL, < Gr. *μόνος*, single, + *τομή*, a cutting.] The typical genus of *Monotomidae*, often referred to *Lathridiidae* or *Cryptophagidae*, founded by Herbst in 1793. They are of small size, superficially resemble species of *Stenopus*, and have the antennae moderate, with a one-jointed club. About 25 species are known, 9 from North America, as *M. americana*, and the rest mainly from Europe. They are found under bark and stones and in ants' nests.

monotome (mon'-ō-tōm), *a* [*monotome*, < Gr. *μόνος*, single, + *τόμος*, section, volume; see *toth*.] Comprising in one tome or volume. [Rare.]

This translation was first published in the monotome edition of Gibbon's *Miscellaneous Works*.

F. Hall, *Mod. Eng.*, p. 50, note.

Monotomidae (mon'-ō-tōm'-i-dē), *n. pl.* [NL, < *Monotoma* + *-idae*.] A family of clavicorn *Coloptera*, typified by the genus *Monotoma*. The dorsal segments of the abdomen are partly membranous, the ventral segments are free, the tarsi are 3-jointed, the wings are not fringed, the second joint of the tarsi is not dilated, the elytra are truncate, the first and fifth ventral segments are longer than the others, the maxillae are bilobate, and the front coxae are small and rounded.

monotomous (mō-not'-ō-mus), *a*. [*monotomous*, < Gr. *μόνος*, single, + *τόμος*, section, volume; see *toth*.] In *musical*, having cleavage distinct in only one direction.

monotone (mon'-ō-tōn), *n* [*monotone*, < Gr. *μόνος*, single, + *τόνος*, tone; see *tone*.] 1. In *rhet.*, a sameness of tone, the utterance of successive syllables at one unvaried pitch, with little or no inflection or cadence.—2. Monotony or sameness of style in writing or speaking.

He speaks of fearful massacres in the same monotone of expression. *Saturday Rev.*

3. In *music* (a) A single tone, without harmony or variation in pitch. (b) Reiteration of words in such a tone, especially in a church service, sometimes with harmonic accompaniment and with occasional inflections or melodic variations, intoning; chanting. Monotone is a natural device for increasing the sonority of the voice, so that it may readily fill a large space, and is also thought by some to have a peculiar solemnity of effect. It is much used as an element in chanting.

4. Something spoken or written in one tone or strain.

"In Memoriam," although a monotone, [is] no more monotonous than the sounds of nature, the murmur of ocean, the sighing of the mountain pines. *Stedman*, *Vit. Poets*, p. 160.

monotone (mon'-ō-tōn), *v. t. and i.*, pret. and pp. *monotoned*, ppr. *monotoning*. [*monotone*, < *monotone*, < Gr. *μόνος*, single, + *τόνος*, tone; see *tone*.] To recite in a single, unvaried tone, intone; chant. Strictly speaking, to *monotone* and to *intono* are not the same, the latter having a technical meaning in connection with Gregorian music, but in common usage they are made synonymous.

monotonic (mō-not'-ō-n-ik), *a* [*monotonic* + *-ic*.] 1. Monotonous. [Rare.]—2. Pertaining to a monotone, uttered in a monotone, also, capable of producing but a single tone, as a drum.

The use of *Monotonic* Recitation is of extreme antiquity, and was probably suggested, in the first instance, as an expedient for throwing the voice to greater distances than it could be made to reach by ordinary means. *Grout's Diet Music*, II. 355.

monotonical (mon'-ō-tōn'-i-kal), *a* [*monotonical* + *-al*.] Same as *monotonic*.

We should not be lulled to sleep by the length of a monotonical declamation. *Chesterfield*.

monotonically (mon'-ō-tōn'-i-kal-ly), *adv*. In a monotonic or monotonous manner.

monotonist (mō-not'-ō-n-ist), *n* [*monotonist* + *-ist*.] One who talks or writes persistently on a single subject. *Darwin*.

monotonous (mō-not'-ō-n-us), *a* [= F *monotonous* = Sp. *monotono* = Pg. It. *monotono*, < L.Gr. *μόνος*, single, + *τόνος*, tone; see *tone*.] 1. Monotone. 2. Characterized by monotony, continued in the same tone without inflection or cadence, unvaried in tone.

Every line was perhaps uniformly recited to the same monotonous modulation with a pause in the midst. *T. Warton*, *Hist. Eng. Poetry*, II.

Then came silence then a voice, Monotonous and hollow like a ghost. *Tennyson*, *Guinevere*.

2. Unvarying in any respect, tiresomely uniform.

One salmon behaves much like another, and after one has caught four or five, and when one knows that one can catch as many more as one wishes, impatient people might find the occupation monotonous. *Froude*, *Sketches*, p. 85.

Monotonous function, in *math.*, a function whose value within certain limits of the real variable continually increases or continually decreases.

monotonously (mō-not'-ō-n-us-ly), *adv*. In a monotonous manner, with monotony, tiresome uniformity, or lack of variation.

monotonousness (mō-not'-ō-n-us-ness), *n*. The state or quality of being monotonous, monotony, irksome or dreary sameness.

monotony (mō-not'-ō-n-ē), *n* [= F *monotonie* = Sp. *monotonía* = Pg. It. *monotonía*, < Gr. *μόνος*, single, + *τόνος*, tone; see *tone*.] 1. Uniformity of tone or sound, want of inflections of voice in speaking or reading, want of cadence or modulation, monotone.

Our earliest poets were fond of multiplying the same final sound to the most tedious monotony. *T. Warton*, *Hist. Eng. Poetry*, I. 21.

"It is in vain longer," said my father, in the most querulous monotony imaginable, "to struggle as I have done." *Sterne*, *Tristram Shandy*, iv. 19.

2. Tiresome uniformity or lack of variation in any respect, sameness; want of variety.

At sea everything that breaks the monotony of the surrounding expanse attracts attention. *Irrang*, *Sketch Book*, p. 19.

Monotremata (mon'-ō-trem'-ā-tā), *n. pl.* [NL, < Gr. *μόνος*, single, + *τρῖμα* (τ-), a perforation, hole, < *τρυπαίνω*, √ *τρυ*, bore, perforate.] 1.

In *mammal* the lowest order of the class *Mammalia*, containing those mammals which have a single or common opening of the genital, urinary, and digestive organs, and are oviparous. The order coincides with the subclass *Ornithodelphia*, and also with *Prototheria* and *Amniota*, it is divided into two suborders, *Tachyplousa* and *Platypoda*, respectively constituted by the families *Tachyplousidae* (or *Echidnidae*) and *Ornithorhynchidae* (or *Platypodidae*). There are mammary glands but no nipples. There is a common cloaca, into which empty the sperm ducts, oviducts, and uteri, and which also receives the feces as in birds, and the female lay eggs like those of reptiles. The testes, like the ovaries, remain abdominal. There is a peculiar T-shaped episternum or interclavicle, and the coracoid joins the sternum, as in birds (See cut at *interclavicle*). There are no true teeth. The very peculiar mammals which constitute this order are the duck-mole or duck-billed platypus, *Ornithorhynchus paradoxus*, and several species of so-called spiny ant-eaters of the genera *Echidna* or *Tachyglottis* and *Zaglossus* or *Acanthoglossus*. See cuts under *duckbill* and *Echidna*.

2. In *conch*, a division of geophilous pulmonate gastropods, having the external male and female orifices contiguous or common, opposed to *Ditremata*.

monotrematous (mon'-ō-trem'-ā-tus), *a* [As *Monotremata* + *-ous*.] Having a single or common opening for the genital, urinary, and digestive organs, as a mammal, pertaining to the *Monotremata*, or having their characters, monotreme, prototherian.

monotreme (mon'-ō-trem), *a* and *n* [*monotreme*, < Gr. *μόνος*, single, + *τρῖμα*, hole; see *Monotremata*.]

I. *a*. Same as *monotrematous* as, monotreme mammals, a monotreme egg.

II. *n*. A member of the *Monotremata*, as a duck-mole or prickly ant-eater.

monotremous (mon'-ō-trē-mus), *a* Same as *monotrematous*.

monotriglyph (mon'-ō-trī-glyph), *n* [= F *monotriglyphe* = Sp. It. *monotriglifo*, < L. *monotriglyphus*, < Gr. *μόνος*, single, + *τρίγλυφος*; see *triglyph*.] In *arch.*, the usual intercolumniation

Monotriglyph. Temple of Asos. Arch. Doric. (From Report of Investigations, 1881, of Archaeological Institute of America.)

a corner, b frieze, composed of alternating triglyphs and metopes, c intravase or epistyle.

of the Doric order, embracing one triglyph and two metopes in the entablature immediately above it.

Monotrocha (mō-not'-ō-ka), *n. pl.* [NL, < Gr. *μόνος*, single, + *τροχός*, wheel.] 1. In Ehrenberg's classification, a prime division of *Rohifera*, containing those wheel-animalcules in which the wheel is single, continuous, and ciliated, distinguished from *Sorotrocha*, with compound or divided wheel. He divided them into two orders, *Holotrocha* and *Schizotrocha*, each of two families.—2. In *entom.*, one of two great divisions of *Hymenoptera*, including those groups in which the trochanters have but one joint, proposed by Hartig in 1837. It comprises the superfamilies *Tubulifera*, *Heterogyna*, *Pomeren*, *Diaplopteryga*, and *Anthophila*. It is distinguished from *Ditrocha* which includes the *Phylophaga*, *Xylophaga*, and *Parantissa*.

monotrochal (mō-not'-ō-kal), *a* [As *Monotrocha* + *-al*.] 1. Having a single ciliated band as a larval worm, as, a *monotrochal* polychaetous larva. *Encyc. Brit.*, XXI. 5.—2. In *entom.*, having a single trochanteric joint, of or pertaining to the *Monotrocha*.

monotrochian (mon'-ō-trō-ki-an), *a* and *n*. [As *Monotrocha* + *-ian*.] I. *a*. Monotrochous, as a rotifer, not sorotrochous.

II. *n* A wheel-antimaleule whose wheel is single and undivided, any member of the *Monotrocha*

monotrochous (mō-not'ró-kus), *a*. [As *Monotrocha* + *-ous*] Same as *monotrochal*

Monotropæ (mō-not'ró-pit), *n* [NL (Linnaeus, 1737), so called in allusion to the nodding flowers, which are 'turned to one side'; < Gr. *mónos*, single, + *τρέπειν*, turn. Cf. Gr. *μόντροπος*, of one kind, living alone, < *mónos*, single, + *τρέπω*, a turn, way, kind, < *τρέπειν*, turn] A genus of dicotyledonous plants, the type of the natural order *Monotropæ*, characterized by a solitary flower with separate petals. But one species is known, *M. uniflora*, of North America, Japan, and the Himalayas, the Indian pipe, corpse plant, or ice plant. This plant is a root-parasite or feeds on vegetable mold, it is fleshy, white or pinkish throughout, its simple clustered stems 5 or 10 inches high, clad with small scales, the nodding flower with about ten similar sepals and petals. The pine sap or bird's nest, often classed as *M. Hypophyllum*, is now referred to a separate genus, *Hypophyllum*. See *bird's nest*, 1 (b), and *beech-drops*

Monotropæ (mon-ō-ti-ō-pē-ē), *n* pl [NL (Nuttall, 1818), < *Monotropæ* + *-æ*] A natural order of dicotyledonous plants of the cohort *Ericales*, typified by the genus *Monotropæ*. It is composed of leafless parasitic herbs, with a four to six celled superior ovary. Nine genera are known, with 10 or 12 species, natives of woods in the north temperate zone, especially in America. They have short, scaly, unbranched stems, and no green color, but are tawny, white, or reddish

monotropic (mon-ō-trop'ik), *a* [< Gr. *μόντροπος*, of one kind; see *Monotropæ*] Same as *monodromic*

monotypal (mon'ō-ti-pal), *a* [< *monotypic* + *-al*] Same as *monotypic*

monotype (mon'ō-tip), *n* and *a* [= *F* *monotypic*, < Gr. *mónos*, single, + *τύπος*, type; see *type*] *I* *n* 1 The only, single, or sole type, as a species single in its genus, a genus in its family, etc., a typical representative alone of its kind — 2 A print from a metal plate on which a picture is painted, as in oil-color or printers' ink. Only one proof can be made, since the picture is transferred to the paper

We do not remember to have seen on the word *monotypic* before, nor have we seen a public exhibition of examples of this curious combination of painting and printing; but the process, or something like it, is one well known among artists, and consists of taking off, on a sheet of wet paper, by means of a press, a transfer of a picture simply painted on a polished plate of metal. *The Academy*, No 891, p. 384

II. A Monotypic

monotypic (mon-ō-tip'ik), *a* [< *monotypic* + *-ic*] *I* Having but one type, consisting of a single representative, represented by a monotype, as a genus of one species, a family of one genus, etc. — 2 Being a monotype, alone representing a given group, as a species single in its genus.

Also *monotypal* and *monotypical*

Mons Mænalus. [NL: L. *mons*, mount; *Mænalus*, < Gr. *Μαenalος*, *Μαῖναλος*, a range of mountains in Arcadia] A constellation, the mountain Mænalus, formed of a few stars in the feet of Boötes. It was introduced in 1600, in a posthumous work of Hevelius. The name (that of a mountain in Arcadia) is connected with the myth of Arcas and his mother, personages identified with the Great Bear and Boötes by the Greeks. The constellation is not now admitted.

Mons Mensæ. [L. named after Table Rock at the Cape of Good Hope] *mons*, mount; *mensæ*, gen. of *mensa*, table] A constellation introduced by Lacaille in 1752, between the south poles of the equator and the ecliptic. Its brightest star is of the fifth magnitude.

Rom term, < Malay *musim*, monsoon, season, year, = Hind *mausim*, time, season, < Ar. *mausim*, a time, season, < *wasama*, mark] *1* A wind occurring in the alternation of the trade-winds in India and the north Indian ocean. During the half-year from April to October the regular northeast trade winds are reversed; and, with occasional interruptions, the wind blows almost a steady gale from the southwest. In some places the change of the monsoons is attended with calms, in others with variable winds, and in others, as in China, with storms and much rain. These tempests seamen call the *breaking up of the monsoon*. The reversed trade-wind is termed the *summer, southwest, or wet monsoon*, and the trade wind is termed the *winter, northeast, or dry monsoon*.

The times of seasonable winds called *Monsoons*, wherein the ships depart from place to place in the East Indies. *Hakluyt's Voyages*, II 278.

They often lose the benefit of their *monsoons*, and much more easily other winds, and frequently their voyage. *Boyle*, Works, III 771

The *summer monsoon* is a much stronger current than its winter correlative, and in India this fact is recognized in popular language, since it is often spoken of distinctively as "the *monsoon*," the claim of the *winter monsoon* to the same designation being for the moment tacitly ignored. *H F Banford*

2 Any of the winds that have annual alternations of direction and velocity, arising from differences of temperature between continents or islands and the surrounding ocean

All the great *monsoons* are found in countries and on oceans adjacent to high mountain ranges. *W Ferrel*

On the Brazilian coast, about and to the south of the tropic, there is so much regularity in the alternation of winds, although but for a few points, that their two prevailing currents, from south east to north east, are often called *monsoons*. *Fitz Roy*, Weather Book, p. 145

mont-de-piété (mon-de-pe-a-té), *n* [*F. = Sp. monte de piedad*, *< It. monte di pietà*, lit. 'fund of pity' (cf. equiv. *Sp. monte pío*, 'pious fund'), *< L. mon(t)-s*, hill, heap, *ML.* also pile of money, fund, bank, *de*, of, *pieta(t)-s*, piety, *ML.* compassion, pity see *mount*], *de*, piety, pity]. An institution established by public authority for lending money on the pledge of goods, at a reasonable rate of interest. These establishments originated in Italy in the fifteenth century, the object in founding them being to counteract the exorbitantly usurious practices of the Jews. The funds together with suitable warehouses and other accommodations, are managed by directors, and the goods pledged are sold if the money lent on them is not returned by the proper time.

monte (mon'te), *n* [*< Sp. monte*, a hill, mountain, wood, heap, a gambling-game, *< L. mons* (mont-), a hill, mountain see *mount*]. 1 A tract more or less thickly covered with shrubby vegetation or scanty forests, a forest. In South America, and especially in the northern part, the word *monte* is used to designate more or less scantily forested regions or narrow belts of forest vegetation, while *montaña* is applied to broad, densely forested areas. In Mexico and California *monte* more generally has the signification of 'forest'.

Less than a league above there is [in New Granada] a spot destitute of trees. All such are called *lano* — plain — whether they be flat or hilly, and all land covered with thickets is called *monte* if it be but a few miles through, and *montaña* if more. *J. H. Holton, New Granada*, p. 436.

The *montes* of South and Central Uruguay form narrow fringes to the larger streams and rarely exceed a few hundred yards in width. Seen from distant higher ground, they resemble rivers of verdure meandering through the bare campos from which they are sharply defined — the reason being that the wood only grows where it is liable to inundation. *Encyc. Brit.* IX 406.

2 A favorite Spanish and Spanish-American gambling-game played with the Spanish pack of forty cards. The players bet on certain cards of lay out, and win or lose according as others drawn from the pack do or do not match with these. Monte was the most popular of the gambling games of California in the early times of the gold discoveries. — *Three-card monte*, a gambling game, of Mexican origin, played with three cards of which one is usually a court card. By skillful manipulation, the cards are so thrown on the table, face down, as to deceive the eye of the manipulator's opponent who bets on the position of one of the cards, usually the court card.

monte-bank (mon'te-bangk), *n* A gambling-table or an establishment where monte is played, also, the bank or pile of money usually placed in front of the dealer, and used in paying the stakes.

Monteith

movable rim, and decorated with flutings and a scalloped edge. It was also used for cooling and carrying wine-glasses.

New things produce new words, and thus *Monteith* has by one vessel saved his name from Death. Quoted in *Ashton's Social Life in Reign of Queen Anne*, I 183.

Silver cisterns could not have been common or often put to the basic use [rinsing forks and spoons during dinner], but when they were discarded from the table, the more interesting *monteith*, with its movable rim, tall punch glasses, lemon strainer and ladle, took their place. *N. and Q.* 7th ser., VII 250.

2 [Appar. of different origin from the above, but from the same surname]. A kind of cotton handkerchief bearing white spots on a colored ground, the spots being produced by a chemical which discharges the color. *Dict. Needlework*. *monte-jus* (*F. pron* mōnt'zhil), *n* [*F. < monter*, raise, + *jus*, juice see *mount*], *v*, and *juice*. In *sugar-manuf.*, a force-pump by which the juice from the cane-mill is raised to the clarifiers on a story above. It consists of a vessel with a well sunk in the bottom and having three valves, one by which the juice is received another by which it is discharged and a third by which steam is admitted. The steam entering above the surface of the juice, forces it up through the delivery pipe to the clarifiers. The steam then condenses and leaves a vacuum and the operation of alternately filling and ejecting continues. *E. H. Knight*.

Monte-jus

montem (mon'tem), *n* [*Short for L. processus ad montem*, going to the hill, *processus*, a going forward, *orig. pp* of *procedere*, go forward (see *proceed*), *ad*, to, toward, *montem*, acc. of *mons*, a hill, mount see *mount*]. The name given to an ancient English custom, prevalent among the scholars of Eton till 1847, which consisted in their proceeding every third year on Whit-Tuesday to a tumulus or mound near the Bath road, and exacting "money for salt," as it was called, from all persons present, or passers-by. The sum so collected was given to the captain, or senior scholar, and was intended to assist in defraying the expenses of his residence at the university. The "salt money" has been known to reach nearly £1,000.

month (munth), *n* [*Early mod. E. moneth*, *< ME. month*, *moneth*, *< AS. mōnath*, *mōnoth* (in inflection syncopated *month*) = *OFries. mōnath*, *mōnad*, *mond* = *D. maand* = *MLG. manet*, *LG. maand* = *OHG. mānod*, *MHG. mānot*, *mānet*, *G. monat* = *Icel. mānuðhr* = *Sw. månad* = *Dan. måned* = *Goth. mēnōths*, a month, cf. *Gael. mios*, *Ir. mios*, *Oldr. mī* (gen. *mīs*) = *W. mis* = *OBulg. mēstet* = *Serv. mjesec* = *Bohem. mēsec* = *Pol. miesiąc* = *Russ. mesyats* = *Lith. mėnėsis* = *Let. mēnes* = *L. mensis* = *Gr. mēnē* (for **mēnē*), month, = *Skt. māsa* (for **māns*, **mēns*), month names derived from or connected with the name for 'moon,' *AS. māna* = *Goth. mēna* = *Gr. μην*, etc., but the phonetic relations are not entirely clear see *moon*]. 1 Originally, the interval from one new moon to the next, called specifically a *lunar*, *synodical*, or *illuminative month*. This seldom varies more than a quarter of a day from its mean value, which is 29 530559 days, or 29 days, 12 hours, 44 minutes and 27 seconds. There are besides, other periods of the moon which are termed *months* by astronomers. These are—(a) The *astronomical month* or mean period of the revolution of the moon from one perigee to the next. It is 27 days, 18 hours, 18 minutes, 57.4 seconds. (b) The *sidereal month*, or mean period required by the moon to make a circuit among the stars. It is 27 days, 7 hours, 43 minutes, 11.5 seconds. (c) The *tropical month*, or the mean period of the moon's passing through 360 degrees of longitude, as from one vernal equinox to the next. It differs from the sidereal month only by an amount corresponding to the monthly precession of the equinox, and is 27 days, 7 hours, 43 minutes, 47 seconds. (d) The *nodical or draconic month*, which is the mean time between two successive passages by the moon through its rising node, it is 27 days, 6 hours, 5 minutes, and 36 seconds. 2 One twelfth part of a tropical year, or 30 days, 10 hours, 29 minutes, 38 seconds, called specifically a *solar month*. — 3 One of the twelve parts into which the calendar year is arbitrarily divided, called specifically a *calendar month*. The calendar months are January, 31 days, February, 28 (except in leap-year, when it has 29), March, 31, April, 30, May, 31, June, 30, July, 31, August, 31, September, 30, October, 31, November, 30, December, 31. 4 At common law and in equity, *month* has been understood to mean 'a lunar month,' which is assumed to be 28 days, except when the contrary appears, and except when used of mercantile transactions, such as negotiable paper, etc. In celestial law, and now in all cases throughout the United States generally, its legal meaning is 'a calendar month' except when the contrary appears. For the purpose of calculating interest, a month is generally considered the twelfth part of a year, and as equivalent to 30 days. 5 *pl.* Same as *mensēs*. *Minshew, Cotgrave*.

5 A morbid or fantastic state of mind, as a fit of bad temper, sudden anger, or sullenness, also, absence of mind, or abstraction generally used in the plural

Then turn'd Sir Torry, and, being in his moods,
Left them
Tennyson, *Lancelot and Elaine*

6 A state of mind with reference to something to be done or omitted; a more or less capricious state of feeling disposing one to action commonly in the phrase *in the mood* as, many artists work only when they are *in the mood*

It should be remembered that the motive power always becomes sluggish in men who too easily admit the supremacy of moods.
Lowell, *New Princeton Rev*, I 107

mood² (mod), *n* [A later form of *mood*¹, which is preferable in both the grammatical and logical use, though not usual in the latter see *mood*¹] **1** In *gram*, same as *mood*¹, }

The mood is an affection of the verb serving the variety of utterance. *A. Hume*, *Orthographie* (E. E. T. S.), p 80

2 In *logic*, a variety of syllogism depending on the quantity (universal or particular) and quality (affirmative or negative) of the propositions composing it. In the traditional logic the names of the moods (invented by Petrus Hispanus) are—First figure, Barbara, (Clement, Daril, Ferio, Barallipton, (Clement, Dabitis, Fapesmo, Kriachomorum. Second figure, Cesare, Camestres, Festino, Baroco, Third figure, Darapti, Felapton, Disamis, Datisi, Bocardo, Disjunctio. These names are merely mnemonic, and many of their letters are significant. The vowel *a* denotes a universal affirmative proposition, *e* the universal negative, *i* the particular affirmative, and *o* the particular negative. By the first syllable is indicated the major premise, by the second the minor, and by the third the conclusion. For example, the name *Barbara* shows that the first mood of the first figure consists of two universal affirmative premises leading to a universal affirmative conclusion. The same understanding is to be had in regard to the vowels of the other words. Certain of the consonants also are significant. Thus all indirect moods designated by a word beginning with *b* should be reduced to Barbara, the first mood of the first figure, all that are designated by a word beginning with *c*, to the second mood, (Clement all in *d* to Daril, the third, and all in *f* to Ferio the fourth. Other letters indicate how to reduce indirect to direct moods thus *s* signifies that the proposition denoted by the vowel immediately preceding is to be simply converted in the reduction, *p* that the proposition denoted by the vowel immediately preceding should be converted per accidens, *m*, that the premises should be transposed—that is, the major should be made the minor, and conversely, and *c*, that the mood designated by the word in which it occurs should be reduced per impossibile whence the verses

Simplificiter vult a vort, p vero per acci
N vult transponi, p per impossibile duci
Servat majorem, variatque secundam minorem,
Tertium majorem variat, servatque minorem

A mood is a lawful placing of propositions in their dewe qualitative or quantitative. *St. T. Wilson*, *Art of Logic*, fol 28

3 In *music*, same as *mood*¹, }

moon¹ (mōn), *n* [*< ME. moone, none, < AS. mōna = OS. māno = OFries. mōna = MI. macne, D. maan = MLG. mane, mān, LG. maan = OHG. māno, MHG. māne, mōn, also (with excrecent t, due prob in part to association with mānt, month) mante, mände, G. mond = Icel. mān = Sw. māne = Dan. maane = Goth. mēna (all mase), the moon, = Gr. μῆν, the moon, = Lith. mėnė, the moon, cf., with appar formative s, Obulg. mūsetis, etc., moon, month, L. mensis, month, (Gr. μῆν (for μῆνς), month (Mys. the Moon-god, L. Lunus, Myn, the Moon-god, L. Luna), Skt. māś (for *māns, *mēns) = Zend māś, > Pers. māh (> Hind Turk. māk), moon, month. The relations of these forms to each other, and to the words for 'month' (see month), and their ult. root, are undetermined. The usual explanation is that the moon is the 'measurer' (of time), < √ ma, Skt. mā, measure (whence ult. E. metel and measure). The L. name of the moon (luna) and the L., Gr., and Teut. names for the sun (L. sol = AS. sōl, etc., Gr. ἥλιος, AS. sunne, E. sun, etc.) come from other roots, meaning 'shine'] **1.** A heavenly body which revolves around the earth monthly, accompanying the earth as a satellite in its annual revolution, and shining by the sun's reflected light. Next to the sun, the moon is the most conspicuous and interesting of celestial objects. The rapidity of its motion the variety of its phases, and especially the striking phenomena of eclipses, compelled the attention of the earliest observers and the fact that lunar observations can be made available to determine the longitude has given the theory of the moon's motion the first rank in economic importance, while the mathematical problems involved have proved most interesting and fertile from the scientific point of view. Of all the heavenly bodies (meteors excepted) the moon is nearest to us. Its mean distance is a little more than sixty times the radius of the earth, or 238,800 miles. The dimensions of the moon as compared with those of the earth are far greater than those of any other satellite in proportion to its primary. Its*

diameter is 2,163 miles (about 0.273 of the earth's equatorial diameter), and its volume, or bulk, is 0.0204, or about one forty ninth of that of the earth. Its mean density however (about 3.4 times that of water), is only about three fifths of that of the earth, and its mass about one eightieth. The inclination of its orbit to the ecliptic is 5° 40'. It completes its revolution around the earth in an average period of 27d 7h 43m 11s, which constitutes the sidereal month, the ordinary, or synodical, month, from new moon to new moon again, is a little more than two days longer—29d 12h 44m 2.7s. (See month.) The moon's orbital motion is subject to considerable inequalities, due to the disturbing action of the sun, and the investigation of these inequalities makes up the major part of the "lunar theory." The moon revolves on its axis once in a sidereal month, thus always presenting nearly the same face to the earth.

A circumstance which has led to the fallacy of a denial of its rotation (See rotation.) Its disk appears to the naked eye diversified by dark and bright patches, giving rise to the "man in the moon" of popular fancy (see under man), but on examination with a powerful telescope these are lost sight of, and replaced by a crowd of interesting objects such as mountains and valleys, craters and clefts, on a scale unknown upon the earth. The surface structure seems to be mainly volcanic, resembling very closely in certain respects, and differing most markedly in others from, that which is characteristic of volcanic regions on the earth's surface. The moon has no clouds, shows no indications of an atmosphere or of the presence of water, and is believed to have a temperature which at its maximum does not rise above the melting point of ice. See *libration*.

moon-culminating (mōn'kul'mi-nā-tīng), *a* In *astron*, passing the meridian at nearly the same time and on nearly the same parallel of declination as the moon — **Moon-culminating stars**, stars which culminate at about the same time and nearly on the same parallel of declination as the moon. They are the stars of which the places are given in the Nautical Almanac (generally four in number for each day) for the days on which the moon can be observed, for use in longitudes determinations

moon-culminations (mōn'kul'mi-nā'shonz), *n pl* In *astron*, a method of determining the longitude of a place by observing with a transit-instrument the times at which the limb of the moon and certain stars in the same part of the sky culminate, or cross the meridian. The fundamental principle is essentially the same as that involved in the nautical method of "lunar distances." Among the stars the moon's position is utilized to make known the Greenwich time — but the transit observations are more exact and accurate than those made with a sextant, and the reductions are more simple. The method has been entirely superseded by the telegraphic method wherever circumstances render the latter practicable.

moose (mos), *n* [Formerly also *moosy*, *< Algonkin musk*, *Kusteneux moussah* said to mean 'wood-eater'] An animal of the family *Cervidae*, the *Cervus alces* or *Alces americanus* of those who hold that it is the same as the elk of Europe, the moose-deer of America, by some considered specifically distinct from the elk of Europe, and then called *Alces americana*. It is the largest animal of its kind in America, and corresponds to the elk of Europe, being very different from the American elk or wapiti *Elaphurus (Cervus) canadensis*. The male may attain the height of 17 hands and weigh 1,000 pounds or more. The form is very ungainly, with humped withers and sloping quarters and a very heavy, unsightly head. The horns are enormous and completely palmate, with many sharp points. A kind of bag or pouch hangs from the throat. The limbs are thick, with broad hoofs, the tail is very short, the ears are large and slouching, and the muzzle is very broad, with a thick pendulous upper lip. The color is brown of variable shade. The female is hornless, and much smaller and more slightly built than the male. The moose inhabits the northernmost part of the United States as northern New England, and much of British America. The cut at *elk* is an equally good figure of the moose

2 The place of such a meeting — 3 In *early Eng. hist.*, a court formed by assembling the men of the village or tun, the hundred, or the kingdom, or other representatives. It exercised political and administrative functions with some judicial powers. Compare *utena gemot*. See the quotation

The four or ten villages in who followed the recte of each township to the general muster of the hundred were held to represent the whole body of the township from whence they came. Each voice was its vote, they doing its doing, their pledge its pledge. The hundred *moot* a *moot* which was made by this gathering of the representatives of the townships that lay within its bounds thus became at once a court of appeal from the *moots* of each separate village as well as of arbitration in dispute between township and township. The judgment of gravey times, and of life or death, fell to its share, while it necessarily possessed the main right of law making for the hundred that the village *moot* possessed for each separate village. And as hundred *moot* stood above town *moot*, so above the hundred *moot* stood the folk *moot*, the general muster of the people in arms, at once war host and highest law court, and general Parliament of the tribe. But whether in folk *moot* or hundred *moot* the principle of representation was preserved. In both the constitutional forms the forms of deliberation and decision were the same. In each the priests proclaimed sentence, the addressees of higher blood spoke, groups of five men from each township stood round, shaking their spears in assent, clashing shields in applause, settling matters in the end by loud shouts of "Aye" or "Nay"

Sir M. Hale, Orig. of Mankind, p. 356.

Take a *moral* act. What is it that constitutes it *moral*? Its tendency at least according to Shaftesbury's system, is to promote the general welfare or the good of mankind.

Fowler, Shaftesbury and Hutcheson, p. 14.

"What do you mean by a thoroughly *moral* man?" said I. "Oh, I suppose every one means the same by that," said Melissa, with a slight air of rebuke. "Sh. Gaviel is an excellent family man—quite blameless there, and so charitable round his place at Lipton." When a man whose business hours, the solid part of every day, are spent in an unscrupulous course of public or private action which has every calculable chance of causing widespread injury and misery, can be called *moral* because he comes home to dine with his wife and children and cherishes the happiness of his own hearth, the arguery is not good for the use of high ethical and theological disputation.

George Eliot, Theophrastus Such, xvi.

3 In a special sense, relating to the private and social duties of men as distinct from civil responsibilities specifically so used in the Hegelian philosophy.

"When St. Crispin stands leather to make shoes for the poor, that act is *moral* (moralisch) and wrong (unrechtlich)" — a remark which explains itself a use of *moralisch* better than much commentary.

D. G. Ritchie, Mind, XIII. 483.

4 Connected with the perception of right and wrong in conduct, especially when this is regarded as an innate power of the mind, connected with or pertaining to the conscience. See *moral sense*, *moral law*, below.

The development of a high moral sensibility can scarcely fail to bring suffering with it, as the mind recognises the meanness of actual attainment.

J. Sully, Sensation and Intuition, p. 156.

The problem of exercising the child's *moral* feelings is clearly connected with that of forming his moral character.

J. Sully, Outlines of Psychol., p. 568.

moralistic (mor'al-ist-ik), *a* [*< moralist* + *-ic*] Inculcating morality, didactic as, *moralistic* poets

morality (mō-rā'l-i-ti), *n*, pl *moralities* (-tiz) [*< ME* *moralite* = *D* *moralitas* = *G* *moralitas* = *Sw* *Dan* *moralitet*, < *OF* *moralite*, *F* *moralité* = *Sp* *moralidad* = *Pg* *moralidade* = *It* *moralità*, morality, morals, < *LL* *moralitas* (-s), manner, characteristic, character, < *L* *moralis*, of manners or morals, moral see *moral*] 1 The doctrine or system of duties, morals, ethics

The end of *morality* is to procure the affections to obey reason, and not to invade it *Bacon* *Advancement of Learning*, II

Moral philosophy, *morality*, ethics casuistry, natural law, mean all the same thing, namely, that science which teaches men their duty and the reasons of it *Paley*, *Moral Philos*, I 1

The attempt to exhibit *morality* as a body of scientific truth fell into discredit, and the disposition to dwell on the emotional side of the moral consciousness became prevalent *H* *Sidgwick*, *Methods of Ethics* p 91

2 The character of being moral, accord with the rules of right conduct, moral quality, virtuosity often used in a restricted sense to denote sexual purity

The *morality* of an action is founded on the freedom of that principle by virtue of which it is in the agent a power, having all things ready and requisite to the performance of an action, either to perform or not perform it *South*, *Sermons*

Until we have altered our dictionaries, and have found some other word than *morality* to stand in popular use for the duties of man to man, let us refuse to accept as moral the contractor who enriches himself by using large machinery to make pastboard sofas pass as leather for the feet of unhappy conscripts *George Eliot*, *Theophrastus Such*, xvi

3 Moral conduct, the practice of the duties inculcated by the moral rules that are recognized as valid, in a general and collective sense, those forms of human conduct which are the subject of moral judgments

Morality (in Shaftesbury's theory) is only Beauty in one of its higher stages *Fowler*, *Shaftesbury and Hutcheson*, p 128

Our theory has been that the development of *morality* is founded on the action in man of an idea of true or absolute good, consisting in the full realization of the capabilities of the human soul

T *H* *Green*, *Prolegomena to Ethics*, § 286

In point of fact, however, *morality* means nothing more nor less than that state of natural neutrality or indifference to good and evil, to heaven and hell, which distinguishes man from all other existence, and endows him alone with selfhood or freedom *H* *James*, *Subs*, and *Mind*, p 4

Hence—4 The practice of moral duties regarded as apart from and as not based upon vital religious principle

All others they [the Jews] thought served God only with their own inventions, or placed their Religion in dull *morality* *Stillingfleet*, *Sermons*, I viii

Morality, thou deadly bane,
Thy tans of thousands thou hast slain!
Vain is his hope whose stay and trust is
In moral mercy, truth, and justice!
Burns, *Dedication to Gavin Hamilton*

5 A moral inference or reflection, a moralization, intent, meaning, moral

But ye that holden this tale a fable,
As of a fox, or of a cock and hen,
Takesh the *morality* thereof, good men
Chaucer, *Nun's Priest's Tale*, l 620

A genial optimist, who daily drew
From what he saw his quaint *morality*
Bryant, *The Old Man's Counsel*

6 A kind of drama which succeeded the musical-plays or mysteries, and in which the persons of the play were abstractions, or allegorical representations of virtues, vices, and mental powers and faculties. A popular feature of the moralities was the introduction of the Devil and a Vice who under many names attended him, and who was finally morged in the foot of the later drama

A *morality* may be defined as a play enforcing a moral truth or lesson by means of the speech and action of characters which are personified abstractions—figures representing virtues and vices, qualities of the human mind, or abstract conceptions in general *A* *W* *Ward*, *Eng Dram Lit* I 56

=*Syn* 1-3 *Morality*, *Morals*, *Manners*, *Virtue*, *Ethics* *Morality* (or morals) and *manners* stand over against each other as respectively conforming to right or propriety in the great duties and in the minor forms of action and intention. *Morality* is often popularly applied to conformity to right in that particular in which right conduct is most felt to be important, as chastity or honesty. *Virtue* is morality of the fullest type and regarded as a part of personal character. *Ethics* is the technical, as *morals* is the popular, name for the science of *virtue*

moralization (mor'al-i-zā-shun), *n* [*< F* *moralisation* = *Sp* *moralización* = *Pg* *moralização* = *It* *moralizzazione*, < *ML* *moralisatio* (-n), *moralizatio* (-n), < *moralizari*, moralize see *moralize*] 1 The act of moralizing or reflecting upon morals, a moral reflection—2 The act of giving a moral meaning or effect to something, explanation in a moral sense

It is more commendable and also commodious. If the players have rid the *moralization* of the chase, and when they plays do thynke upon it *Sir T* *Eliot*, *The Governour*, I 26

Annexed to the fable is a *moralization* of twice the length in the octave stanza *T* *Warton*, *Hist Eng Poetry*, III 417

John de Vigney wrote a book which he called "The *Moralization* of Chaucer," wherein he assures us that this game was invented by a philosopher named Xerxes in the reign of Evil Merodach, king of Babylon, and was made known to that monarch in order to engage his attention and correct his manners. "There are three reasons," says de Vigney, "which induced the philosopher to institute this new pastime: the first to reclaim a wicked king the second, to prevent idleness and the third, practically to demonstrate the nature and necessity of nobleness" *Strutt*, *Sports and Pastimes*, p 406

3 The act of rendering moral, subjection to moral rules, the process of giving a moral character to something

The elimination of ethics, then, as a system of precepts, involves no intrinsic difficulties other than those involved in the admission of a natural science that can account for the *moralization* of man *T* *H* *Green*, *Prolegomena to Ethics*, § 8

The highest type of *moralization* lies in acquiring such an abstract basis of principle as makes a man a spontaneous and independent fountain of justice and goodness, not a mere channel through which runs a public and common beneficence *W* *Wallace*, *Mind*, XIII 425

The Moravians are Slavs in race and language, closely allied to the Czechs - 2 A member of the Christian denomination entitled the Unitas Fratrum or United Brethren, which traces its origin to John Huss. Its members were expelled from Bohemia and from Moravia in 1627, but in 1722 a remnant settled in Herrnhut, Saxony (hence the brethren are sometimes in Germany called *Herrnhuter*). The organization at present has three home provinces (German, British, and American) each of which has its own government by synod and several mission provinces. All these together form a whole, represented by a general synod, which meets every ten years in Herrnhut. The ministers are bishops (not diocesan) presbyters, and deacons. The worship is liturgical. The members of the denomination believe in the Scriptures as the only rule of faith and practice, and maintain the doctrines of the total depravity of human nature, the love of God the Father, the actual humanity and godhead of Jesus Christ, the atonement, the work of the Holy Spirit, good works as the fruit of the Spirit, the second coming of Christ, and the resurrection of the dead. The Moravians are especially noted for their energy and success in missionary work

[In this sense *more* is regularly used to modify an adjective or adverb and form a comparative phrase, having the same force and effect as the comparative degree made by the termination *-er* as, more wise (*wisier*), more wisely, more illustrious, more illustriously, more contemptible, more durable. It may be used before any adjective or adverb which admits of comparison, and is generally used with words of more than two syllables, in which the use of the suffix *-er* would be awkward as, more curious, more eminent, etc. formations like *curiower*, *virtuower*, etc., being avoided though occasionally used in older writers. For merely more was very often used superlatively in the comparative as, more better, braver, fierer, mightier, etc.]

Mormon² (môr'môn), *n* [Prop attrib use (the Mormon Church, Bible, etc.) of Mormon, one of the characters of the "Book of Mormon," from whom it derives that name.] An adherent of a religious body in the United States, which calls itself "The Church of Jesus Christ of Latter-day Saints." This denomination was founded in 1830 by Joseph Smith, a native of Sharon Vermont. The government of the church is a hierarchy consisting of two orders of priesthood, an order of Melchisedek (the higher) and an Aaronic or lesser order. The former is presided

over by a president and two counselors whose authority extends over the entire church, and it includes the twelve apostles, the seventy, the patriarch, the high priests, and the elders. The twelve apostles constitute a traveling high council, which ordains other officers and is entrusted with general ecclesiastical authority; the seventy are the missionaries and the propagandists of the body, the patriarch pronounces the blessing of the church, the high priests officiate in the offices of the church in the absence of any higher authorities, and the elders conduct meetings and superintend the priests. The Aaronic priesthood includes the bishops, the priests, the teachers, and the deacons, the two last named are the subordinate orders in the church. The duties of the bishops are largely secular. The entire territory governed by the church is divided and subdivided into districts, for the more efficient collection of tithes and the administration of the government. The Mormons accept the Bible, the Book of Mormon, and the Book of Doctrine and Covenants as authoritative, and regard the head of their church as invested with divine authority, receiving his revelations as the word of the Lord. They maintain the doctrines of repentance and faith, a literal resurrection of the dead, the second coming of Christ and his reign upon earth (having the seat of his power in their territory), baptism by immersion, baptism for the dead, and polygamy as a sacred duty for all those who are capable of entering into such marriage. The Mormons settled first at Kirtland, Ohio, then in Missouri, and after their expulsion from these places in Nauvoo, Illinois, in 1847-8 they removed to Utah, and have since spread into Idaho, Arizona, Wyoming, etc. They have frequently defied the United States government. There is also a comparatively small branch of the Mormon Church, entitled "The Reorganized Church of Jesus Christ of Latter-day Saints," which is opposed to polygamy and is ecclesiastically independent of the original organization. Also *Mormonism*, *Mormonite* — **Book of Mormon**, one of the authoritative writings of the Mormon Church. According to the Mormons, it is the record of certain ancient peoples in America, abridged by the prophet Mormon, written on golden plates, and discovered by Joseph Smith at Cumorah (western New York), and translated by him. By anti-Mormons it is generally regarded as taken from a romance written about 1811 by Solomon Spaulding, whose manuscript was used by Smith and Rigdon.

mormyrian (môr-mîr'i-an), *n* [*< Mormyrus* + *-ian*]. A fish of the family *Mormyridae*.

Mormyridae (môr-mîr'i-dê), *n* pl. [NL., *< Mormyrus* + *-idae*]. A family of scyphophorous fishes, exemplified by the genus *Mormyrus*, to which different limits have been given. (a) By Bonaparte and most others it is restricted to those species which have well developed dorsal and anal fins more or less nearly opposite each other but of varying extent, and a well developed caudal remote from the dorsal and anal. It includes all but one of the scyphophorous fishes. (b) By Günther it is extended to include the foregoing, together with species without an anal or caudal fin placed by other authors in the family *Gymnarchidae*. All have the body and tail scaly, head scaleless, margin of the upper jaw formed in the middle by the intermaxillaries, which coalesce into a single bone, and laterally by the maxillaries. The interoperculum is sometimes rudimentary, and on each side of the single parietal bone is a cavity leading into the interior of the skull. The family contains a number of fresh-water African fishes representing several genera, some of which are remarkable for the prolongation of the snout. There is also great diversity in the development of the dorsal and anal fins, in some cases these being much lengthened and in others very short. *Mormyrus oxyrinchus* is common in the Nile. Also *Mormyri*.

Mormyrus (môr-mî'rus), *n*. [NL. (*cf.* L. *mormyr*), *< Gr* μωμύρος, a sea-fish]. 1 An African genus of fishes representing the family *Mormyridae*. *M. oxyrinchus* is the micheh, oxyrinch, or sharp nosed mormyre of the Nile. It is held in high esteem, and was venerated by the ancient Egyptians, and never eaten, because it was supposed to have devoured the privy member of the god Osiris. Some species are highly esteemed for food.

In another view, the word is orig. 'dawn,' connected with *Lith* *merkti*, blink, *Gr* μωμύριον, shine, glitter (*see marble*). The same word, in the *ME* form *mowen*, *morgen*, lost the final *-n* (which was understood as a suffix) and became, through *morgi*, *mowre*, the source of *E* *morrow*, while a deriv. form *morning* has taken the place of both forms in familiar use. *see* *morrow*, *morning*. 1 The first part of the day, the morning now used chiefly in poetry and often with personification. *See* *morning*.
